

PART 0 SAR Characterization Report

Test Report No. 14809943H-A

Customer	Panasonic Corporation of North America
Description of EUT	Radio Module (Tested inside of Panasonic Personal Computer FZ-40)
Model Number of EUT	WW21A
FCC ID	ACJ9TGWW21A
Issue Date	June 16, 2023
Remarks	For Permissive Change

Representative test engineer	Approved by
	
Takeshi Hiyaji Engineer	Takayuki Shimada Leader

Report Cover Page - Form-ULID-003532 (DCS:13-EM-F0429) Issue# 22.0

ANNOUNCEMENT

- This test report shall not be reproduced in full or partial, without the written approval of UL Japan, Inc.
- The results in this report apply only to the sample tested. (Laboratory was not involved in sampling.)
- This sample tested is in compliance with the limits of the above regulation, if any.
- This test report covers SAR technical requirements.
It does not cover administrative issues such as Manual or non-SAR test related Requirements.
(if applicable)
- The all test items in this test report are conducted by UL Japan, Inc Ise EMC Lab.
- The information provided from the applicant for this report is identified.
- For test report(s) referred in this report, the latest version (including any revisions) is always referred.
- This test report is out of scope of any accreditation(s).

1 Introduction

This device uses Qualcomm® Smart Transmit feature and cannot operate without specific absorption ratio (SAR) and power density (PD) characterization at the device level, beforehand. The parameters obtained from SAR and PD characterization (char) is used as input for Smart Transmit. Both SAR char and PD char will be entered via the Embedded File System (EFS) to enable the Smart Transmit feature.

Part 0 report describes the results for the SAR char and PD char generation and evaluates them on the 5G milli wave (mmW) new radio (NR) enabled equipment under test (EUT).

This description is an overview for STx and test results may not include both sub6 (SAR) and mmW (PD).

This report is for evaluation of n77 and Downlink CA Combination only, as it was added to the EUT. For the other test, please see original application (FCC ID: ACJ9TGWW21A).

2 Customer information

Company Name	Panasonic Corporation of North America
Address	Two Riverfront Plaza, 9th Floor Newark, NEW JERSEY, 07102-5940, USA
Telephone Number	+1-201-348-7760
Contact Person	Ben Botros

***Remarks:**

Panasonic Connect Co., Ltd. is on behalf of the applicant: Panasonic Corporation of North America (Company incorporated abroad).

The information provided from the customer is as follows.

- Customer, Description of EUT, Model Number of EUT, FCC ID on the cover and other relevant pages
- Operating / Test Mode(s) (Mode(s)) on all the relevant pages
- SECTION 2: Customer information
- SECTION 3: Equipment under test (EUT) other than the receipt date
- SECTION 8: SAR device uncertainty, SAR design target, SAR char generation (P_{limit} and P_{max} (Tune up limit))

* The laboratory is exempted from liability of any test results affected from the above information in section 3.

3 Equipment under test (EUT)

3.1 Identification of EUT

Description	Radio Module
Model Number	WW21A
Serial Number	1LTSA00106
Condition	Engineering prototype (Not for Sale: This sample is equivalent to mass-produced items.)
Modification	No Modification by the test lab
Receipt Date	May 22, 2023
Calculated Date	May 23, 2023

<Information of Host device>

Type	Personal Computer FZ-40 Intel Core i7-1185G7 (1.2 GHz, Max 4.8 GHz) 14 inch LCD (1920 x 1080)
------	---

3.2 Product description

General Specification

Rating	DC 3.0 to 3.6 V
--------	-----------------

Radio Specification

Wireless technology	Dup.	Band	Mode

6 Time averaging for SAR and PD

The Qualcomm® Smart Transmit algorithm controls and manages the instantaneous Tx power to maintain the time-averaged Tx power (in turn, time-averaged RF exposure) is in compliance with regulatory limits.

7 Definitions, symbols, and abbreviations

7.1 Definitions

SAR_design_target	: Target value to use STx and also this shall be less than regulatory SAR limit (i.e., 1gSAR limit for FCC) after accounting for all device design related uncertainties.
SAR_design_target_extremity	: SAR_design_target for limbs
Tx_power_at_SAR_design_target	: Transmit level that matches SAR_design_target
Δ_{min}	: housing material influence
PD_design_target	: The design target for PD compliance. It should be less than regulatory power density limit to account for all device design related uncertainties
<i>input.power.limit</i>	: For a PD characterized wireless device, the input power level at antenna port(s) for each beam corresponding to PD_design_target.
PD char	: The table that contains input.power.limit fed to antenna port(s) for all supported beams.
N beams	: The mmW device supports total N beams, where M out of N are single beams and the rest of (N-M) are beam pairs (where 2 single beams are excited at the same time).
power density (PD) or S_{av}	: Energy per unit time and unit area crossing a surface of area A characterized by the normal unit vector $\hat{n}$ and averaging time.

$$S_{av} = \frac{1}{AT} \iint (\mathbf{E} \times \mathbf{H}) \cdot \hat{n} dA dT$$

Specific Absorption Rate (SAR):	: The time derivative (rate) of the incremental energy (dW) absorbed by (dissipated in) an incremental mass (dm) contained in a volume element (dV) of a given density (ρ), as shown in the following equation:
---------------------------------	--

$$SAR = \frac{d}{dt} \left(\frac{dW}{dm} \right) = \frac{d}{dt} \left(\frac{dW}{\rho dV} \right)$$

7.2 Symbols

Symbol	Quantity	Unit	Dimensions
E	Electric field	volt per meter	V / m
f	Frequency	hertz	Hz
H	Magnetic field	ampere per meter	A / m
λ	Wavelength	meter	m
S	Local power density	watt per square meter	W / m ²
PD or S _{av}	Spatial-average power density	watt per square meter	W / m ² (mW / cm ²)
SAR	Specific Absorption Rate	watt per kilo gram	W / kg

7.3 Abbreviations

DSI	: device state index
KDB	: knowledge data base from Federal communication committee (FCC)
BS or BSE	: base station or base station emulator
CW	: continuous wave
DUT	: device under test
NR	: new radio
PD	: power density
RF	: radio frequency
TER	: total exposure ratio
S _n	: surface number
S _{tot} or S _{total}	: total propagating power flux density into the phantom
S _n or S _{norm}	: surface normal propagating power flux density into the phantom or in normed vector space
Ant	: antenna
nG	: n generation (e.g. 3G,4G and 5G)
☒	: applicable.
☐	: NOT applicable.

8 SAR char generation

8.1 Usage scenarios in SAR evaluation and DSI determination

applicable	Scenario	Description	Position example
☐	Head	Device positioned next to head	$SAR_{head} = \max\{SAR_{LC}, SAR_{LT}, SAR_{RC}, SAR_{RT}\}$
☒	Body	Device positioned next to body with or without a body-worn accessory	$SAR_{body} = \max\{SAR_{s1}, SAR_{s2}, SAR_{s3}, SAR_{s4}, SAR_{s5}, SAR_{s6}\}$
☐	Hotspot mode	Device transmitting in hotspot mode and assumed to be located next to human body	$SAR_{hotspot} = \max\{SAR_{s1}, SAR_{s2}, SAR_{s3}, SAR_{s4}, SAR_{s5}, SAR_{s6}\}$
☒	Extremity SAR (10g)	10gSAR is evaluated for all applicable surfaces of the device against the flat phantom with 0 mm separation distance	$10gSAR_{extremity} = \max\{10gSAR_{s1}, 10gSAR_{s2}, 10gSAR_{s3}, 10gSAR_{s4}, 10gSAR_{s5}, 10gSAR_{s6}\}$

L/R: Left/Right, C/T: Cheek/Tilt, S: Surface

Table 8-A summary of Usage/Exposure Scenario for this EUT

DSI	State
0	Proximity sensor off or disable

8.2 SAR device uncertainty

Table 8-B device uncertainty

Item	Uncertainty dB
Total uncertainty	1.0

k=2

8.3 SAR design target

To account for the total uncertainty, SAR_{design_target} needs to:

$$SAR_{design_target} < SAR_{regulatory_limit} \times 10^{\frac{-total\ uncertainty}{10}}$$

the SAR_{design_target} for the EUT is determined as: < 1.27 W / kg

FCC

DSI	SAR_{design_target} [W / kg]
0	1.0 All band

8.4 SAR char generation

Calc. Plimit = measured power + 10log (target SAR / measured SAR value)
ex Plimit for NR Band n77 = 23.21 + 10 log(1.00/0.476) = 26.4 dBm

Table 8-C Summary of Plimit

RAT	Band	Pmax[dBm]	Plimit
WCDMA	2	24.5	24.5
WCDMA	4	24.5	24.5
WCDMA	5	24.5	24.5
LTE	2	24.0	24.0
LTE	4	24.0	24.0
LTE	5	24.0	24.0
LTE	7	24.0	24.0
LTE	12	24.0	24.0
LTE	13	24.0	24.0
LTE	14	24.0	24.0
LTE	17	24.0	24.0
LTE	25	24.0	24.0
LTE	26	24.0	24.0
LTE	38	24.0	24.0
LTE	41	24.0	24.0
LTE	48	12.3	12.3
LTE	66	24.0	24.0
LTE	71	24.0	24.0
NR	n2	24.5	24.5
NR	n5	24.5	24.5
NR	n41	24.5	24.5
NR	n66	24.5	24.5
NR	n71	24.5	24.5
NR	n77	24.5	24.5

Limbs Plimit is also below than target SAR so same value is applied.

For LTE B48

Uplink Downlink config (UDC)	Special sub frame (SSF)	Burst ave tune up DSI=1 [dBm]	Pmax burst ave [dBm]	Time ave DSI=1/0 [dBm]
0	0 to 7	12.3	11.09	9.4
1	0 to 7	13.8	12.66	9.4
2	0 to 7	16.6	15.57	9.4
3	0 to 7	15.3	14.10	9.4
4	0 to 7	16.8	15.69	9.4
5	0 to 7	19.7	18.56	9.4
6	0 to 7	12.9	11.64	9.4

LTE band 48 doesn't have a same burst tune up for UDC/SSF but has same time average tune up limit.

Appendix A SAR result

A.1 n77 (Block A)

Test Position	Dist. (mm)	Modulation	UL CH #	Freq. (MHz)	UL RB Allocation	UL RB Start	Power (dBm)		1-g SAR (W/kg)		Calc. Plimit
