To Whom it May Concern;

We are seeking certification for the Whisper Veterinary Stethoscope FCC ID AHTWVS, under FCC 15.249. The device records animal lung sounds captured by the stethoscope head and sends this data to the WhisperRx receiver which is plugged into a USB port of the host device typically a PC. The Whisper Veterinary Stethoscope uses a 2.4GHz single chip transceiver from Nordic Semiconductor (nRF24L01+) to communicate with the WhisperRx which has the same transceiver. The stethoscope is battery powered only. It uses only primary battery cells and will not be recharged or powered externally.

This device uses a PCB antenna that is integral to the unit.

Sincerely,

A handwritten signature in blue ink, appearing to read "Randolph K. Geissler", written over the printed name.

Randolph K. Geissler
