2.925(d) states "In order to validate the grant of equipment authorization, the nameplate or label shall be permanently affixed to the equipment and shall be readily visible to the purchaser at the time of purchase."

For Ritron model RQX-156-XT the FCC label is affixed to the enclosure in which the radio is housed. The label is readily visible during normal installation as the faceplate must be removed to install batteries or apply power. This is accomplished using the T-25 Torx bit attached to the product when purchased. The yellow XT case is a ruggedized outside cover in which the actually radio enclosure is placed.
