Laboratories Introduction

SIEMIC, headquartered in the heart of Silicon Valley, with superior facilities in US and Asia, is one of the leading independent testing and certification facilities providing customers with one-stop shop services for Compliance Testing and Global Certifications.

In addition to testing and certification, SIEMIC provides initial design reviews and compliance management throughout a project. Our extensive experience with China, Asia Pacific, North America, European, and International compliance requirements, assures the fastest, most cost effective way to attain regulatory compliance for the global markets.

4. Equipment under Test (EUT) Information

Description of EUT: WatchKeyOCL MA

Main Model: WatchKeyOCL MA

Serial Model: N/A

Date EUT received: March 10, 2016

Test Date(s): March 10 to March 11,2016

Port: USB Port

Input Power: DC:5V Battery:3.7V

Trade Name : OCL

FCC ID: AMGWATCHKEYOCLMA

| Test Report No. | 16020220-FCC-E |
|-----------------|----------------|
| Page | 7 of 29 |

5. <u>Test Summary</u>

The product was tested in accordance with the following specifications. All testing has been performed according to below product classification:

| FCC Rules | Description of Test | Result |
|---------------------------|-----------------------------------|------------|
| §15.107; ANSI C63.4: 2014 | AC Power Line Conducted Emissions | Compliance |
| §15.109; ANSI C63.4: 2014 | Radiated Emissions | Compliance |

Measurement Uncertainty

| Test Item | Description | Uncertainty |
|--------------------|---|-------------|
| Radiated Emissions | Confidence level of approximately 95% (in the case where distributions are normal), with a coverage factor of 2 (for EUTs < 0.5m X 0.5m X 0.5m) | 3.952dB |

| Test Report No. | 16020220-FCC-E |
|-----------------|----------------|
| Page | 8 of 29 |

6. Measurements, Examination And Derived Results

6.1 AC Power Line Conducted Emissions

| Temperature | 25°C |
|----------------------|----------------|
| Relative Humidity | 50% |
| Atmospheric Pressure | 1019mbar |
| Test date : | March 10, 2016 |
| Tested By: | Deon Dai |

Requirement(s): Item Spec **Applicable** Requirement For Low-power radio-frequency devices that is designed to be connected to the public utility (AC) power line, the radio frequency voltage that is conducted back onto the AC power line on any frequency or frequencies, within the band 150 kHz to 30 MHz, shall not exceed the limits in the following table, as measured using a 50 [mulH/50 ohms line impedance stabilization network (LISN). The lower limit applies at the boundary between the frequencies ranges. Class A Limit 47CFR§15.10 굣 a) Frequency ranges Limit (dBµV) OP (MHz) Average 0.15 ~ 0.5 79 66 0.5 ~ 30 73 60 Class B Limit Frequency ranges Limit (dBµV) (MHz) OP Average 0.15 ~ 0.5 66 – 56 56 - 460.5 ~ 5 56 5 ~ 30 Vertical Ground Reference Plane Test Receiver EUT 80cm Test Setup Horizontal Ground Reference Plane Note: 1.Support units were connected to second LISN. 2.Both of LISNs (AMN) are 80cm from EUT and at least 80cm from other units and other metal planes support units. 2. The EUT and supporting equipment were set up in accordance with the requirements of the standard on top of a 1.5m x 1m x 0.8m high, non-metallic table. The power supply for the EUT was fed through a 50 [mu]H/50 EUT LISN, connected to 3. filtered mains. Procedure 4. The RF OUT of the EUT LISN was connected to the EMI test receiver via a low-loss coaxial cable. 5. All other supporting equipment were powered separately from another main supply. The EUT was switched on and allowed to warm up to its normal operating condition. 6.

A scan was made on the NEUTRAL line (for AC mains) or Earth line (for DC power) over

| Test Report No. | 16020220-FCC-E |
|-----------------|----------------|
| Page | 9 of 29 |

| | the required frequency range using an EMI test receiver. High peaks, relative to the limit line, were then selected, The EMI test receiver was then tuned to the selected frequencies and the necessary measurements made with a receiver bandwidth setting of 10kHz. Steps 6-7 were repeated for the LIVE line (for AC mains) or DC line (for DC power). | | | | |

| 47CFR§15.10 7(d) | a) | | | | | | |
| Test Setup | | Ant. Tower Support Units Turn Table Ground Plane Test Receiver | - | | | | |
| Procedure | The EUT was switched on and allowed to warm up to its normal operating condition. The test was carried out at the selected frequency points obtained from the EUT characterisation. Maximization of the emissions, was carried out by rotating the EUT, changing the antenna polarization, and adjusting the antenna height in the following manner: Vertical or horizontal polarisation (whichever gave the higher emission level over a full rotation of the EUT) was chosen. The EUT was then rotated to the direction that gave the maximum emission. Finally, the antenna height was adjusted to the height that gave the maximum emission. For emission frequencies measured below and above 1GHz, set the spectrum analyzer on a 100kHz and 1MHz resolution bandwidth respectively for each frequency measured. Steps 2 and 3 were repeated for the next frequency point, until all selected frequency points were measured. | | | | | | |
