

Emission Test Report
Standard: FCC Part 15 Subpart C / IC RSS-210
Class II Permissive change

Document Number : FCC 19-0239-0

Product: IBM integrated Bluetooth with 56K Modem

measured with **IBM ThinkPad R50 Series**

FCC ID: ANO20020100MTN
IC: 349E-BMDC200

August 15, 2003

**MEASUREMENT / TECHNICAL REPORT – Part 15 Subpart C
(Intentional Radiator)****IBM integrated Bluetooth with 56K Modem
with
ThinkPad R50 Series****FCC ID : ANO20020100MTN****August 15, 2003**

This report concerns: (check one)	
Original Grant	_____
Class I change	_____
Class II change	_____✓_____
Equipment type: <u>Bluetooth modular device</u>	
This report shall not be reproduced except in full, without the written permission of this test lab.	
The measurement results contained in this report relate only to the item which was tested.	
Measurement procedure used is ANSI C63.4-2000 unless otherwise specified.	
Other test procedure: _____	
The FCC has issued provisional acceptance of this test laboratory for Declaration of Conformity testing per letter dated 1997.	
APPLICANT ANTI-DRUG ABUSE CERTIFICATION:	
By checking yes, the applicant certifies that, in the case of an individual applicant, he or she is not subject to a denial of federal benefits, that includes FCC benefits, pursuant to Section 5301 of the Anti-Drug Abuse of 1988, 21 U.S.C. 853(a), or, in the case of a non-individual applicant (e.g. corporation, partnership or other unincorporated association), no party to the application is subject to a denial of federal benefits, that includes FCC benefits, pursuant to that section. For the definition of a “party” for these purposes, see 47 CFR 1.2002(b).	
<u>Yes</u> or No	
“Report shall not be reproduced except in full, without the written approval of the laboratory” “the report must not be used by the client to claim product endorsement by NVLAP or any agency of the US government”

A. General Information

APPLICANT : IBM Japan, Ltd.
 TEST SITE : IBM Japan, Ltd., Yamato Semi-anechoic chamber #1
 TEST SITE ADDRESS : 1623 – 14 Shimotsuruma, Yamato-shi, Kanagawa 242-8502 Japan
 Tel: +81-46-215-4779, Fax: +81-46-273-7420
 REGULATION : FCC Part 15 Subpart C
 Industry Canada RSS-210 (Issue No.5)
 MODEL NAME : IBM Integrated Bluetooth with 56K Modem
 FCC ID : ANO20020100MTN
 IC Certification Number : 349E-BMDC200
 SERIAL NUMBER : 7A1-SIV133
 PHYSICAL CONDITION : Preproduction
 KIND OF EQUIPMENT : DTS: Bluetooth modular device
 TESTED DATE : July 31, August 5, 6, 7 and 8, 2003

A.1 Test Methodology

Both conducted and radiated testing were performed according to the procedures in ANSI C63.4-2000. Radiated testing was performed at an antenna to EUT distance of 3 meters.

A.2 Test Facility / NVLAP Accreditation

The semi-anechoic chamber #1 used to correct the data are located in Yamato Laboratory, IBM Japan.

- This facility has been fully described in a report dated September 1998, submitted to the FCC office, and accepted in a letter, dated Nov. 2, 1998(31040/SIT).
- IBM Yamato EMC Engineering is recognized under the National Voluntary Laboratory Accreditation Program for satisfactory compliance with Criteria established in Title 15, Part 285 Code of Federal Regulations.(NVLAP Lab code: 200198-0)
- This facility is accepted by **Industry Canada** in a letter dated January 25, 2002 as number **IC 4221** for chamber #1.

A.3 EUT details

Table A EUT details

Model and S/N	FCC ID IC Certification Number	Description
IBM Integrated Bluetooth with 56K Modem (s/n 7A1-SIV133)	FCC ID: ANO20020100MTN IC:349E-BMDC200	Applying modular transmitter Built_in type Bluetooth card without antenna
IBM ThinkPad R50 Series M/T 1829-62x (s/n ZZ-08233)	N/A	Host equipment IBM Notebook PC with built_in antenna CPU: Intel® Pentium® M Processor, 1.6GHz
P/N 02K6746	N/A	Universal AC adapter 72W, Unshielded power cord

B. Summary of Test Results

Table-B presents the list of the measurement items for Spread Spectrum, Direct Sequence devices under FCC Part 15 Subpart C and Industry Canada RSS-210.

The section numbers of upper portion are showing FCC number, and the other (lower) ones are for IC.

Table-B List of the measurements

Section(s)	Test Items		Condition	Result
	Transmit mode (TX):			
15.247(a)(1) 6.2.2(o)(a1)	Carrier Frequency Separation	min. 25 kHz	Conducted	Pass
15.247(a)(1)(iii) 6.2.2(o)(a3)	Number of Hopping Frequencies	at least 15 non-overlapping channels		Pass
	Dwell Time	0.4 seconds within a 31.6 second (79 hops × 0.4sec) period		Pass
15.247(f) 6.2.2 (o)(c2)(6)	Dwell Time of Hybrid mode	0.4 seconds within a 12.8 second (32 hops × 0.4sec) period		Pass
– 5.9.1 / 5.9.2	Occupied bandwidth, and Designation of Emissions	IC requirement.		N/A
15.247(b)(1) 6.2.2(o)(a3)	Peak output power	Shall not exceed 1.0 W.		Pass
15.247(c) 6.2.2 (o) (e1)	Conducted spurious (Out of Band Emissions), and Bandedge compliance	The radiated emission to any 100 kHz of outband shall be at least 20 dB below the highest inband spectral density.		Pass
15.247(f) 6.2.2 (o)(c2)(7)	Transmitter power spectral density of Hybrid mode	Shall not be greater than 8 dBm in any 3 kHz band.		Pass
15.207 6.6	AC Wireline Conducted emissions 150 kHz – 30 MHz	Class B: Freq.(MHz) QP(dBμV) Ave.(dBμV) 0.15 - 0.5 66 - 56 56 - 46 0.5 - 5 56 46 5 - 30 60 50		Pass
15.205 / 209 6.2.1 / 6.3	General Field Strength Limits (Restricted Bands and Radiated Emission Limits)	Shall not exceed the limits specified in FCC 15.209, or RSS-210, Table 3.	Radiated (30M -1GHz)	Pass
			Radiated (1G –25GHz)	Pass
	Receive mode (RX):			
15.207 7.4	AC Wireline Conducted Emissions 150 kHz – 30 MHz	Class B: Freq.(MHz) QP(dBμV) Ave.(dBμV) 0.15 - 0.5 66 - 56 56 - 46 0.5 - 5 56 46 5 - 30 60 50	Conducted	Pass
15.205 / 209 7.3	General Field Strength Limits (Restricted Bands and Radiated Emission Limits)	Shall not exceed the limits specified in FCC 15.209, or RSS-210, Table 3.	Radiated (30M -1GHz)	Pass
			Radiated (1G –25GHz)	Pass

	Other requirements		Result
15.247(b)(4)(i) —	Antenna gain	Peak gain of the device : 2.16 dBi	N/A
15.203 6.2.2(o)(e2)	Unique antenna connector	The device employs an unique electronic connector. Refer to “Confidential_BIOS_Lock” exhibit.	complies

C. Operation Mode of EUT

All tests were performed using the “BlueTest version 1.4” and “BlueChat version 2.2”.

Hopping channels

The applying wireless card is designed to the Bluetooth Standard. The lowest hopping frequency is 2402MHz, and the highest one 2480MHz. Total 79 hopping channels are used with each 1MHz of channel spacing.

Ch.	Operation Frequency [GHz]	Ch.	Operation Frequency [GHz]	Ch.	Operation Frequency [GHz]	Ch.	Operation Frequency [GHz]
1	2.402	21	2.422	41	2.442	61	2.462

20	2.421	40	2.441	60	2.461		

Test Frequencies (Section 15.31m)

In line with the Section 15.31(m) of Public Notice DA 00-705 dated March/30/2000, some measurements are performed at the highest, middle, and lowest available channels with the hopping function disabled. (i.e. at **2402MHz**, **2441MHz** and **2480MHz**)

Unless otherwise specified the above condition, the test was performed while EUT had its hopping function enabled.

D. Test Instruments

Table-D List of Measuring Instruments

Description	Model	Serial Number	Calibration Date	Calibration Interval

Notes.

- The above equipment calibration is traceable to National standards.
- HP: Hewlett Packard, R&S: Rohde & Schwarz

E. Measurement Uncertainty

Uncertainties of the both, the Yamato EMI radiated test facilities (EMI chambers, #1 and #2) and the Yamato EMI conducted test facility are derived with the NIS 81 "Treatment of uncertainty in EMC measurements" 1994.

Estimated site uncertainty values are as follows.

EMI chamber #1 : 4.39dB

EMI chamber #2 : 4.40dB

EMI conducted measurement system : 2.4dB

Detail should be referred to "Treatment of Uncertainty, Calculations and Policy" report, document number TCR 10-0015.

F. Temperature and Humidity

The temperature is controlled within range of 17° to 28°.

The relative humidity is controlled within range of 40% to 70%.

G. Related Submittal(s)/Grant(s)/Notes

The host unit with full peripheral devices including the applying modular as an unintentional radiator is classified as a Digital Device under the FCC Part 15 Subpart B or the Industry Canada Class B Emission Compliance (ICES-003), and subject to DoC.

1. Carrier Frequency Separation

[FCC 15.247(a)(1), RSS-210 6.2.2(o)(a1)]

1.1 Test Procedure

- The carrier frequency separation was measured with a spectrum analyzer connected to the antenna terminal, while EUT had its hopping function enabled.
- The spectrum analyzer was set to :
 Span = 3 MHz (wide enough to capture the peaks of two adjacent channels),
 Resolution Bandwidth (RBW) = 30 kHz (1% of the span or more),
 Video Bandwidth (VBW) = 30 kHz (= RBW or more), Sweep = auto,
 Detector function = peak, Trace = max hold
- After the trace being stable, the reading value between the peaks of the adjacent channels using the marker-delta function was recorded as the measurement results.

1.2 Test Instruments and Measurement Setup

Table 1-1 : Test Instruments

Description	Model	Serial Number
Spectrum Analyzer EMI Test Receiver	R&S ESI26	836119/003
Coax cables: - Spectrum Analyzer <=> EUT	Length: 110 cm Loss: 1.3 dB	

Notes: - R&S : Rohde & Schwarz

1.4 Trace Data

Date: 31.JUL.2003 16:19:54

Plot 1-1. Carrier Frequency Separation

2. Number of Hopping Frequencies [FCC 15.247(a)(1)(iii), RSS-210 6.2.2(o)(a3)]

2.1 Test Procedure

- The number of hopping frequencies was measured with a spectrum analyzer connected to the antenna terminal, while EUT had its hopping function enabled.
 - To get higher resolution, four frequency ranges within the 2400 - 2483.5 MHz FH band were examined.
 - The spectrum analyzer was set to :
 - Frequency range 1: Start = 2389.5 MHz, Stop = 2414.5 MHz
 - 2: Start = 2414.5 MHz, Stop = 2439.5 MHz
 - 3: Start = 2439.5 MHz, Stop = 2464.5 MHz
 - 4: Start = 2464.5 MHz, Stop = 2489.5 MHz
- RBW $\geq$ 1% of the span, VBW $\geq$ RBW, Sweep = auto, Detector function = peak,
Trace = max hold

2.2 Test Instruments and Measurement Setup

Same as the Chapter 1(Table 1-1 & Figure 1).

2.3 Measurement Results

Plot 2-4. Number of Hopping Frequencies (range 4)

3. Occupied Bandwidth (20 dB Bandwidth) [RSS-210 5.9.1]

3.1 Test Procedure

- The bandwidth at 20 dB below the highest inband spectral density was measured with a spectrum analyzer connected to the antenna terminal, while EUT had its hopping function disabled at the highest, middle and the lowest available channels.
- The spectrum analyzer was set to :
 - Center frequency = the highest, middle and the lowest channels,
 - Span : approximately 2 or 3 times of the 20 dB bandwidth = 2 MHz
 - RBW : 1% of the 20 dB bandwidth or more = 10 kHz
 - VBW : equal to RBW or more = 30 kHz
 - Sweep = auto, Detector function = peak, Trace = max hold
- After the trace being stable. Use the marker-to-peak function to set the marker to the peak of the emission. Use the marker-delta function to measure 20 dB down one side of the emission. Reset the marker-delta function, and move the marker to the other side of the emission, until it is (as close as possible to) even with the reference marker level. The marker-delta reading at this point is the 20 dB bandwidth of the emission.

3.2 Test Instruments and Measurement Setup

Same as the Chapter 1(Table 1-1 & Figure 1).

3.3 Measurement Results

Test Date: July 31, 2003

Table 3. 20dB Bandwidth

	FCC		IC	
	N/A	N/A	Measured 20 dB Bandwidth (MHz)	Limit
Tx at the lowest ch. (2402 MHz)*1			0.725	N/A
Tx at the middle ch.(2441 MHz)*1			0.725	
Tx at the highest ch.(2480 MHz)*1			0.725	
Inquiry			0.625	
Paging			0.675	

*1 : The measurement was performed at the highest, middle and lowest available channels.

4. Time of Occupancy (Dwell Time)

[FCC 15.247(a)(1)(iii)/15.247(f), RSS-210 6.2.2(o)(a3)/6.2.2(o)(c2)(6)]

4.1 Test Procedure

- The dwell time was measured with a spectrum analyzer connected to the antenna terminal, while EUT had its hopping function enabled.
- The spectrum analyzer was set to :
 Center Frequency: 2441MHz (for Inquiry / Data Transmission), 2442MHz (for Paging)
 RBW = 500 kHz, VBW = 500 kHz (= RBW or more), Span = zero,
 Detector function = peak, Trace = max hold,
 Sweep : Inquiry ; 300 μ s for Burst duration plots, 100 ms for Repetition rate plots
 Paging ; 300 μ s for Burst duration plots, 100 ms for Repetition rate plots
 Data transmission ; 1 ms for Burst duration plots, 500 ms for Repetition rate plots

4.2 Test Instruments and Measurement Setup

Same as the Chapter 1(Table 1-1 & Figure 1).

5. Peak Output Power

[FCC 15.247(b)(1), RSS-210 6.2.2(o)(a3)]

5.1 Test Procedure

- The peak output power is measured with a spectrum analyzer connected to the antenna terminal, while EUT had its hopping function disabled at the highest, middle and the lowest available channels.
- The spectrum analyzer is set to :
 - Center frequency = the highest, middle and the lowest channels,
 - Span : approximately 5 times of the 20 dB bandwidth = 5 MHz (3 MHz for Inquiry/Paging)
 - RBW : greater than the 20 dB bandwidth of the emission being measured = 1 MHz
 - VBW : equal to RBW or more = 3 MHz
 - Sweep = auto, Detector function = peak, Trace = max hold
- Allow the trace to stabilize. Use the marker-to-peak function to set the marker to the peak of the emission. The indicated level is the peak output power.

5.2 Test Instruments and Measurement Setup

Same as the Chapter 1(Table 1-1 & Figure 1).

5.3 Measurement Results

Test Date: August 5, 2003

6. Band-edge

[FCC 15.247(c) regarding FCC Public Notice DA 00-705 dated March 30, 2000]

6.1 Test Procedure

- The bandwidth at 20 dB down from the highest inband spectral density is measured with a spectrum analyzer connected to the antenna terminal, while EUT had its hopping function disabled at the highest, middle and the lowest available channels.
- The spectrum analyzer is set to :
 - Center frequency = the highest, middle and the lowest channels,
 - Span = 8 MHz
 - RBW : 1% of span or more = 100 kHz
 - VBW : equal to RBW or more = 100 kHz
 - Sweep = auto, Detector function = peak, Trace = max hold
- After the trace being stable. Set the marker on the emission at the bandedge, or on the highest spurious emission outside of the operation band, if this level is greater than that at the bandedge. Use the marker-to-peak function to set the marker to the peak of the emission. Read and record both values, then confirm the delta of both values is at least 20 dB.

6.2 Test Instruments and Measurement Setup

Same as the Chapter 1(Table 1-1 & Figure 1).

6.3 Measurement Results

Test Date: August 5, 2003

7. Out of Band Emissions

[FCC 15.247(c), RSS-210 6.2.2(o)(e1)]

7.1 Test Procedure

- The out of band emissions is measured with a spectrum analyzer connected to the antenna terminal, while EUT had its hopping function disabled at the highest, middle and the lowest available channels.
- The spectrum analyzer is set to :
 - Center frequency = the highest, middle and the lowest channels
 - Span : 100 MHz
 - RBW : 100 kHz
 - VBW : 100 kHz
 - Sweep = auto, Detector function = peak, Trace = max hold
- After the trace being stable. Use the marker-to-peak function to set the marker to the peak of the inband emission. Use the marker-delta function to measure 20 dB down the peak of the inband emission.

7.2 Test Instruments and Measurement Setup

Same as the Chapter 1(Table 1-1 & Figure 1).

7.3 Measurement Results

All conducted emission in any 100 kHz bandwidth outside of the spread spectrum band was at least 20dB lower than the highest inband spectral density. Therefore the applying equipment meets the requirement.

8. Transmitter Power Spectral Density of Hybrid mode [FCC 15.247(f), RSS-210 6.2.2(o)(c2)(7)]

8.1 Test Procedure

The peak power density is measured with a spectrum analyzer connected to the antenna terminal, while EUT had been operating in Inquiry and Paging mode.

The spectrum analyzer is set to:

Center Frequency = middle channel, RBW = 3 kHz, VBW = 3 kHz, Span = 2 MHz, Sweep = auto

8.2 Test Instruments and Measurement Setup

Same as the Chapter 1(Table 1-1 & Figure 1).

9. AC WIRELINE CONDUCTED EMISSIONS (150 kHz – 30 MHz) [FCC 15.207, RSS-210 6.6 / 7.4]

9.1 Test Procedure

The conducted emissions are measured in the IBM shielded room with a spectrum analyzer in peak hold. While the measurement, EUT had its hopping function disabled at the highest, middle and lowest available channels in line with Section 15.31(m) of Public Notice DA 00-705 dated March 30, 2000. Emissions closest to the limit are measured in the quasi-peak mode (QP) with the tuned receiver using a bandwidth of 9 kHz. The emissions are maximized further by cable manipulation and Exerciser operation. The highest emissions relative to the limit are listed.

9.2 Test Instruments and Measurement Setup

Figure 9. Cables for Conducted Emission Test

- SW/Con.unit<=> Spe Ana.(Signal In)	1 m	- EMIC-S

Notes: - HP: Hewlett Packard, R&S: Rohde & Schwarz

9.3 Powerline Voltage Calculation

The powerline voltage is calculated by adding insertion losses of LISN, Cable, Switch control unit and Pulse limiter to the measured reading. All factors are included in the reported data.

$$PV = R + CORR$$

where:

$$\begin{aligned} PV &= \text{Powerline Voltage (dB}\mu\text{V)} \\ R &= \text{Measured Receiver Input Amplitude (dB}\mu\text{V)} \\ CORR &= \text{Correction Factor (dB) = LL+CL+SWL+PLL} \\ LL &= \text{Insertion loss of LISN (dB)} \\ CL &= \text{Insertion loss of Cable (dB)} \\ SWL &= \text{Insertion loss of Switch control unit (dB)} \\ PLL &= \text{Insertion loss of Pulse Limiter (dB)} \end{aligned}$$

Given a Receiver input reading of 50.0 dB μ V, LISN loss of 0.6 dB, Cable loss of 0.1dB, Switch control unit loss of 0.1dB and Pulse limiter loss of 0.2dB. The Powerline Voltage of the measured emission is:

$$\begin{aligned} CORR &= 0.6 + 0.1 + 0.1 + 0.2 = 1.0 \text{ (dB)} \\ PV &= 50.0 + 1.0 = 51.0 \text{ (dB}\mu\text{V)} \end{aligned}$$

9.4 Measurement Results

The EUT was found to comply to the limits of FCC Part 15 Subpart C and RSS-210 with a margin of 14.1dB. The 6 highest emissions relative to the limits are reported.

Test Date: August 8, 2003

10. RESTRICTED BANDS RADIATIONS (30 MHz – 1 GHz) [FCC 15.205 / 209, RSS-210 6.2.1 / 6.3 / 7.3]

10.1 Test Procedure

Preliminary radiated emissions are measured in the semi-anechoic chamber at a 3 meter distance on every azimuth in both horizontal and vertical polarity. The antennas are also scanned in height. The identified emissions are further maximized by a cable manipulation. Emissions closest to the limits are measured in the quasi-peak mode with the tuned receiver using a bandwidth of 120 kHz. The highest emissions relative to the limit are listed.

While the measurement, EUT had its hopping function disabled at the highest, middle and lowest available channels in line with Section 15.31(m) of Public Notice DA 00-705 dated March 30, 2000.

Notes: HP: Hewlett Packard, R&S: Rohde & Schwarz

10.3 Field Strength Calculation

The field strength is calculated by adding the Antenna Factor and Cable Loss, and subtracting Amplifier Gain from the measured reading. In this test facility, the Antenna Factor, Cable Loss, and Amplifier Gains are loaded into the Rohde & Schwarz Receiver and the corrected field strength can be read directly on the receiver. All factors are included in the reported data.

$$FS = R + AF + CORR$$

where:

FS	=	Field Strength
R	=	Measured Receiver Input Amplitude
AF	=	Antenna Factor
CORR	=	Correction Factor = CL - AG
CL	=	Cable Loss
AG	=	Amplifier Gain

For example:

Given a Receiver input reading of 51.5dB μ V; Antenna Factor of 8.5dB/m; Cable Loss of 1.3dB; and an Amplifier Gain of 26dB. The Field Strength of the measured emission is:

$$FS = 51.5 + 8.5 + 1.3 - 26.0 = 35.3\text{dB}\mu\text{V/m}$$

Conversion between dB μ V/m (or dB μ V) and μ V/m (or μ V) are done as:

$$\text{Level(dB}\mu\text{V/m)} = 20 \times \text{Log(Level(}\mu\text{V/m))}$$

$$40\text{dB}\mu\text{V/m} = 100\mu\text{V/m}$$

$$48\text{dB}\mu\text{V/m} = 250\mu\text{V/m}$$

10.4 Measurement Results

The EUT was found to comply to the limits of FCC Part 15 Subpart C and RSS-210 with a margin of 1.9 dB at 30 – 1000 MHz band. The 6 highest emissions relative to the limits are reported.

Test Date: August 6, 2003

11. RESTRICTED BANDS RADIATIONS (1 GHz – 25 GHz) [FCC 15.205 / 209, RSS-210 6.2.1 / 6.3 / 7.3]

11.1 Test Procedure

Radiated emissions were measured in the frequency range with 1 to 25 GHz in transmitting mode and 1 to 12.5 GHz in receiving mode. All tests were performed in the semi-anechoic chamber at a 3-meter distance (except for the frequency range with 18 to 25 GHz where test distance was reduced to 1 meter) on both horizontal and vertical polarities. The antenna was also scanned in height. The identified emissions are further maximized as a function of cable manipulation, azimuth, and antenna height. The emissions closest to the limits are measured in the peak mode with the tuned spectrum analyzer using a bandwidth of 1MHz and the average setting mode with the tuned spectrum analyzer using resolution bandwidth of 1 MHz / video bandwidth of 1 kHz or 100 Hz. The highest emissions relative to the limit are listed. While the measurement, EUT had its hopping function disabled at the highest, middle and lowest available channels in line with Section 15.31(m) of Public Notice DA 00-705 dated March 30, 2000.

Notes: HP: Hewlett Packard, R&S: Rohde & Schwarz

11.3 Field Strength Calculation

The field strength is calculated by adding the Antenna Factor and Cable Loss, and subtracting Amplifier Gain from the measured reading. All factors are included in the reported data.

$$FS = R + AF + CORR - FO$$

where:

FS = Field Strength

R = Measured Spectrum analyzer Input Amplitude

AF = Antenna Factor

CORR = Correction Factor = CL-AG

CL = Cable Loss

AG = Amplifier Gain

FO = Distance Falloff Factor

For example:

Given a Spectrum Analyzer input reading of 51.5 dBμV; Antenna Factor of 8.5 dB/m; Cable Loss of 1.3 dB;

Falloff Factor of 0 dB; and an Amplifier Gain of 26 dB. The Field Strength of the measured emission is:

$$FS = 51.5 + 8.5 + 1.3 - 26 - 0.0 = 35.6 \text{ dB}\mu\text{V/m}$$

Conversions between dBμV/m (or dBμV) and μV/m (or μV) are done as :

$$\text{Level(dB}\mu\text{V/m)} = 20 \times \text{Log}(\text{Level}(\mu\text{V/m}))$$

$$40 \text{ dB}\mu\text{V/m} = 100 \mu\text{V/m}$$

$$48 \text{ dB}\mu\text{V/m} = 250 \mu\text{V/m}$$

11.4 Measurement Results

The EUT was found to comply to the limits of FCC Part 15 Subpart C and RSS-210 with a margin of 6.4dB. The measurement was done for the frequency range of 1 to 25 GHz in TX mode and 1 to 12.5 GHz in RX mode.

Test Date: August 6 and 7, 2003
