TEST OBJECT DATA

General EUT Description

This frequency hopping device will be used for the transmission of control-signals for synchronization of the 3D glasses with a 3D screen. It is not only a transmitter, but it has the capability for a two-way communication with the wireless 3D glasses. It has no antenna connector, so all technical data were measured radiated.

RSS-135 This standard does not apply to:

- 1.1.(a) a receiver that scans radio frequencies for the purpose of enabling its associated transmitter to avoid transmitting in an occupied frequency but which does not have the capability of decoding the message (e.g. converting it to audio voice) contained in the radio signal
