Product Name: Bluetooth Adaptor

Model No: HK BTA 10

Date: May, 10, 2012

HK BTA 10 Operational Description

The HK BTA 10 is 2.4GHz Bluetooth adaptor. The TX and RX frequency range is from 2400MHz to 2483.5MHz. The HK BTA 10 is powered by 5VDC/0.4A external power supply. The modulation mode is GFSK/ π /4-DQPSK/8-DPSK.

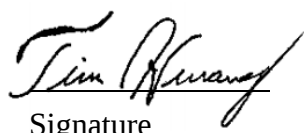

To bring streaming connectivity from smartphones and tablets that are not part of the iOS ecosystem to Harman Kardon AVR, BDS, "HK", MAS and select multimedia models, this product will use Bluetooth 2.1 with A2DP and Extended Bit Rate ("EBR") technology to deliver audio streams via a wireless connection. To assure the best audio quality it will also include "apt-X" and AAC capabilities.

The concept is simple, yet effective: Connecting cables supplied with the unit connect it to an analog L/R input on the AVR or BDS and a region-appropriate power cord is connected to an AC outlet. The user will see and LED flash to indicate that the adaptor is in the "pair" mode and it will then be discovered by the sending devices (e.g. phone or tablet). The user enters "0000" as the pair-code and from there on no further action is needed. The user selects content to play via their device and it is sent to the Harman product for BEAUTIFUL SOUND.

Your attention of this letter will be highly appreciated.

Best Regards,
