

Detail information on audit mode

Dear FCC,

The reason for requesting audio mode is that the output power in the cert is incorrect, the output power in DTS grant should be long to DSS grant, the output power inverse when we filled the 731 accidentally.

Our client desire to correct power into corresponding grant, and which will match with test report. Only the power need to be revised, no other information is modified.

If it is possible to make such modification? Can you put the application into audit mode,

Thanks for you help.

Sincerely
