TEST REPORT

APPLICANT : Sharp Corporation

ADDRESS : 2-13-1, Iida Hachihonmatsu, Higashi-Hiroshima City, Hiroshima,

739-0192, JAPAN

PRODUCTS : Cellular Phone

MODEL NO. : SH1810C

SERIAL NO. : 004401/11/164144/1 **FCC ID** : APYHRO00083

TEST STANDARD : CFR 47 FCC Rules and Regulations Part 24

TESTING LOCATION: Japan Quality Assurance Organization

KITA-KANSAI Testing Center

1-7-7, Ishimaru, Minoh-shi, Osaka 562-0027, Japan

TEST RESULTS : Passed

DATE OF TEST : October 18, 2008 - November 3, 2008

This report must not used by the client to claim product endorsement by NVLAP or NIST or any agency of the U.S. Government.

Yuichi Fukumoto

Manager

Japan Quality Assurance Organization

KITA-KANSAI Testing Center Testing Dept. EMC Division

1-7-7, Ishimaru, Minoh-shi, Osaka 562-0027, Japan

- The measurement values stated in Test Report was made with traceable to National Institute of Advanced Industrial Science and Technology (AIST) of Japan and National Institute of Information and Communications Technology (NICT) of Japan.
- The applicable standard, testing condition and testing method which were used for the tests are based on the request of the applicant.
- The test results presented in this report relate only to the offered test sample.
- The contents of this test report cannot be used for the purposes, such as advertisement for consumers.
- This test report shall not be reproduced except in full without the written approval of JQA.

Regulation : CFR 47 FCC Rules and Regulations Part 24

4 Description of the Equipment Under Test

4.1 General Information

1. Manufacturer : Sharp Corporation

2-13-1, Iida Hachihonmatsu, Higashi-Hiroshima City, Hiroshima,

739-0192, JAPAN

2. Products : Cellular Phone

3. Model No. : SH1810C

4. Serial No. : 004401/11/164144/1

5. Product Type : Prototype

6. Date of Manufacture : September, 2008

7. Transmitting Frequency : 1850.2 MHz(512CH) – 1909.8MHz(810CH)

8. Receiving Frequency : 1930.2 MHz(512CH) – 1989.8MHz(810CH)

9. Emission Designations : 250KGXW(GSM) / 248KG7W(EGPRS)

10. Max. RF Output Power : 1.202W (GSM) / 1.000W (EGPRS) (EIRP)

11. Power Rating : 4.0VDC (Lithium-ion Battery Pack XN-1BT22 680mAh)

12. EUT Grounding : None

13. Category : Broadband PCS
14. EUT Authorization : Certification
15. Receive Date of EUT : October 17, 2008

4.2 Channel Plan

The carrier spacing is 200 kHz.

The carrier frequency is designated by the absolute frequency channel number (ARFCN).

The carrier frequency is expressed in the equation shown as follows:

Transmitting Frequency (in MHz) = $1850.2 + 0.2 \times (n - 512)$ Receiving Frequency (in MHz) = $1930.2 + 0.2 \times (n - 512)$

where, n: channel number ($512 \le n \le 810$)

Regulation : CFR 47 FCC Rules and Regulations Part 24

6 Preliminary Test and Test Setup

6.1 RF Power Output (§2.1046)

6.1.1 Conducted RF Power Output

The Conducted RF Power Output was measured with a power meter, one 10dB attenuator and a short, low loss cable.

6.1.2 ERP / EIRP RF Power Output

Step 1:

In order to obtain the maximum emission, the EUT was placed at the height 1.8 m on the non-conducted support and was varying at three orthogonal axes (Refer to clause 15), at the distance 3 m from the receiving antenna and rotated around 360 degrees.

The receiving antenna height was varied from 1 m to 4 m.

The EUT on the table was placed to be maximum emission against at the receiving antenna polarized (vertical and horizontal).

Then the meter reading of the spectrum analyzer at the maximum emission was A $dB(\mu V)$.

Step 2:

The EUT was replaced to substitution antenna at the same polarized under the same condition as step 1.

The RF power was fed to the transmitting antenna through the RF amplifier from the signal generator.

In order to obtain the maximum emission level, the height of the receiving antenna was varied from 1 m to 4 m.

The level of maximum emission was A $dB(\mu V)$, same as the recorded level in the step 1.

Then the RF power into the substitution horn antenna was P (dBm).

The ERP/EIRP output power was calculated in the following equation.

ERP (dBm) = P (dBm) - Balun loss of the half-wave dipole antenna (dB) + Cable loss (dB)EIRP (dBm) = P (dBm) + Gh (dBi)

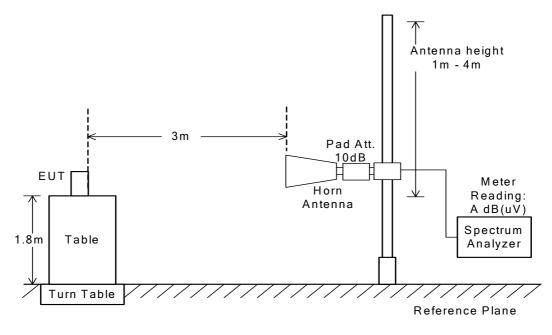

where, Gh (dBi): Gain of the substitution horn antenna.

| Trace | Maxhold | | |

Regulation : CFR 47 FCC Rules and Regulations Part 24

Page 12 of 49

6.6 Field Strength of Spurious Radiation (§2.1053)

Step 1) The spurious radiation for transmitter were measured at the distance 3 m away from the EUT which was placed on a non-conducted support 1.0 m in height and was varying at three orthogonal axes (Refer to clause 15). The receiving antenna was oriented for vertical polarization and varied from 1 m to 4 m until the maximum emission level was detected on the measuring instrument. The EUT was rotated 360 degrees until the maximum emission was received. The measurement was also repeated with the receiving antenna in the horizontal polarization.

This test was carried out using the half-wave dipole antenna for up to 1GHz and using the horn antenna for above 1 GHz.

Step 2) The ERP measurement was carried out with according to Step 2 in page 8. Then the RF power in the substitution antenna half-wave dipole antenna for up to 1 GHz and the substitution horn antenna for above 1 GHz.

The ERP is calculated in the following equation.

```
A) Up to 1 GHz

ERP(dBm) = P (dBm) - (Balun Loss of the half-wave dipole Ant. (dB)) + Cable Loss(dB)

B) Above 1 GHz

ERP(dBm) = P (dBm) + Gh(dBi) - Gd(dBi)

Where, Gh(dBi): Gain of the substitution horn antenna
```

Gd (dBi): Gain of the substitution half-wave dipole antenna

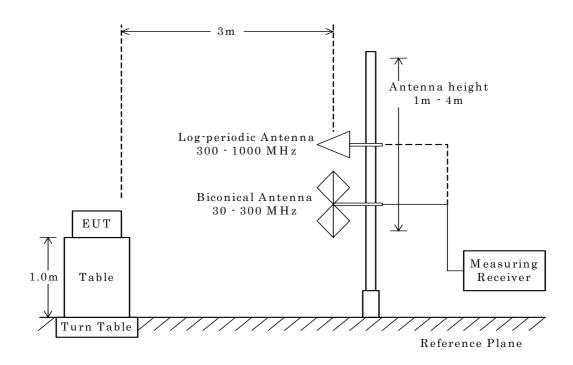

The respective calculated ERP of the spurious and harmonics were compared with the ERP of fundamental frequency by specified attenuation limits, 43+10log₁₀ (TP in watt)[dB]. Where, TP = Transmitter power at the ANT OUT under test configuration as the hands free unit used.

6.7 Frequency Stability (§2.1055)

Frequency Stability versus Temperature

The EUT was placed in an environmental chamber and was tested in the range from -30 to +50 degrees Celsius. The EUT was stabilized at each temperature. The power (4.0VDC) supplied was applied to the transmitter and allowed to stabilize for 10 minutes. The transmitting frequency was measured at startup and 2 minutes, 5 minutes and 10 minutes after startup. This procedure was repeated from -30 to +50 degrees Celsius at the interval of 10 degrees.

Frequency Stability versus Power Supply Voltage

The EUT was placed in an environmental chamber and was tested at the temperature of +20 degrees Celsius. The EUT was stabilized at the temperature. The power (4.0VDC) and the power (3.7VDC, the ending voltage) was applied to the EUT allowed to stabilize for 10 minutes. The transmitting frequency was measured at startup and 2 minutes, 5 minutes and 10 minutes after startup.

11 Summary

General Remarks:

The EUT was tested according to the requirements of the following standard.

CFR 47 FCC Rules and Regulations Part 24

The test configuration is shown in clause 12 to 14.

The conclusion for the test items of which are required by the applied regulation is indicated under the test results.

Determining compliance with the limits in this report was based on the results of the compliance measurement, not taking into account measurement instrumentation uncertainty.

Test Results:

The "as received" sample;

- fulfill the test requirements of the regulation mentioned on clause 1.

odoesn't fulfill the test requirements of the regulation mentioned on clause 1.

|------------------------|----------|-------------------|----------------------|---------|--------|
| СН | [MHz] | [dB] | [dBm] | [dBm] | [mW] |
| 512 | 1850.200 | 10.00 | 17.86 | 27.86 | 610.9 |
| 661 | 1880.000 | 10.00 | 17.80 | 27.80 | 602.6 |
| 810 | 1909.800 | 10.00 | 17.90 | 27.90 | 616.6 |

Calculated result at 1909.800 MHz, as the maximum level points hown on underline:

NOTE: The correction factor shows the attenuation pad loss including the short, low loss cable or adapter.

Regulation : CFR 47 FCC Rules and Regulations Part 24

Page 24 of 49

A.1.2 ERP /EIRP Power Output

A.1.2.1 GSM-PCS1900

(GSM-PCS1900)

Test Date: October 18, 2008 Temp.: 57 °C, Humi: 50 %

1. Measurement Results

| Transmitting Frequency | | | | | ubstitution Measurement Supplied Po [dB(uV)] Substitution | | Gain of Substitution Antenna |
|---------------------------|----------|------------|------------|-------------|--|-------|---------------------------------|
| CH | [MHz] | Hori. (Mh) | Vert. (Mv) | Hori. (Msh) | Vert. (Msv) | [dBm] | [dB] |
| 512 | 1850.200 | 93.9 | 93.9 | 74.0 | 74.2 | - 3.2 | 14.0 |
| 661 | 1880.000 | 94.2 | 93.9 | 74.3 | 74.5 | - 3.2 | 14.1 |
| 810 | 1909.800 | 94.2 | 93.9 | 74.5 | 74.5 | - 3.2 | 14.3 |

2. Calculation Results

| Transmitting Frequency | | Peak El | RP [dBm] | Maximum Peak EIRP | Limits | Margin |
|------------------------|----------|---------|---------------|-------------------|--------|--------|
| СН | [MHz] | (EIRPh) | Vert. (EIRPv) | [W] | [dBm] | [dB] |
| 512 | 1850.200 | 30.7 | 30.5 | 1.175 | 33.0 | + 2.3 |
| 661 | 1880.000 | 30.8 | 30.3 | 1.202 | 33.0 | + 2.2 |
| 810 | 1909.800 | 30.8 | 30.5 | 1.202 | 33.0 | + 2.2 |

Calculated result at 1880.000 MHz, as the worst point shown on underline:

Minimum Margin: 33.0 - 30.8 = 2.2 (dB)

 $NOTE: Setting of \ measuring \ instrument(s):$

| Detector Function | Resolution B.W. | V.B.W. | Sweep Time |
|-------------------|-----------------|--------|------------|
| Peak | 1 MHz | 1 MHz | 20 msec |

Regulation : CFR 47 FCC Rules and Regulations Part 24

Page 32 of 49

Calculated result at 5729.4 MHz, as the worst point shown on underline:

Corr. Factor = 11.3 dB +) Meter Reading = -53.2 dBm Result = -41.9 dBm

Minimum Margin: -13.0 - (-41.9) = 28.9 (dB)

NOTES

1. The spectrum was checked from 9 kHz to 20 GHz.

2. Applied limits : -13.0 [dBm] = $10\log(\text{TP[mW]})$ · $(43 + 10\log(\text{tp[W]}))$ = $10\log(\text{TP[mW]})$ · $(43 + (10\log(\text{TP[mW]}) \cdot 30))$ where, tp[W] = TP[mW] / 1000: Transmitter power at anttena terminal

3. The correction factor is shown as follows:

Corr. Factor [dB] = Cable Loss + 10dB Pad Att. [dB] (9kHz - 2 GHz)

Corr. Factor [dB] = Cable Loss + 10dB Pad Att. + High Pass Filter Loss (D-96) [dB] (over 2 GHz)

- 4. The symbol of "<" means "or less".
- 5. The symbol of ">" means "more than".
- 6. Setting of measuring instrument(s):
