ENGINEERING STATEMENT

The measurements shown in this report were made in accordance with the procedures described on test pages. All reported testing was carried out on a sample equipment to demonstrate limited compliance with FCC CFR 47 Part 2 and FCC CFR 47 Part 27. The sample tested was found to comply with the requirements defined in the applied rules.

**1.2 BRIEF SUMMARY OF RESULTS**

A brief summary of the tests carried out in accordance with FCC CFR 47 Part 2 and FCC CFR 47 Part 27 is shown below.

| Section    | Spec Clause |       | Test Description            | Result | Comments/Base Standard |
|------------|-------------|-------|-----------------------------|--------|------------------------|
|            | Pt 2        | Pt 27 |                             |        |                        |
| LTE FDD 17 |             |       |                             |        |                        |
| 2.1        | 2.1046      | 27.50 | Power Limits and Duty Cycle | Pass   |                        |
| 2.2        | 2.1047(d)   | -     | Modulation Characteristics  | Pass   |                        |
| 2.3        | 2.1049      | 27.53 | Emission Limits             | Pass   |                        |
| 2.4        | 2.1055      | 27.54 | Frequency Stability         | Pass   |                        |

### **1.3 PRODUCT TECHNICAL DESCRIPTION**

Please refer to the SHV31 Model Description Form.

### **1.4 PRODUCT INFORMATION**

#### **1.4.1 Technical Description**

The Equipment Under Test (EUT) was a Sharp SHV31 Dual-band UMTS (FDDI, FDDV) & Quad-band GSM (GSM850/GSM900/DCS1800/PCS1900) & Quad-band LTE (B1,B3, B17, B26) & AXGP (TDD41) multi mode cellular phone with Bluetooth, ANT+, WLAN, SRD (NFC, FeliCa) and GPS. A full technical description can be found in the manufacturer's documentation.

### **1.5 TEST CONDITIONS**

For all tests the EUT was set up in accordance with the relevant test standard and to represent typical operating conditions. Tests were applied with the EUT situated in a shielded enclosure.

The EUT was powered from a 4.0 V DC supply.

FCC Measurement Facility Registration Number  
90987 Octagon House, Fareham Test Laboratory

### **1.6 DEVIATIONS FROM THE STANDARD**

No deviations from the applicable test standards were made during testing.

### **1.7 MODIFICATION RECORD**

Modification 0 - No modifications were made to the test sample during testing.

Product Service

## **SECTION 2**

### **TEST DETAILS**

FCC Testing of the  
Sharp SHV31 Dual-band UMTS (FDDI, FDDV) & Quad-band GSM  
(GSM850/GSM900/DCS1800/PCS1900) & Quad-band LTE (B1,B3, B17, B26) & AXGP  
(TDD41) multi mode cellular phone with Bluetooth, ANT+, WLAN, SRD (NFC, FeliCa) and GPS  
In accordance with FCC CFR 47 Part 2 and FCC CFR 47 Part 27

## 2.1 POWER LIMITS AND DUTY CYCLE

### 2.1.1 Specification Reference

FCC CFR 47 Part 2, Clause 2.1046  
FCC CFR 47 Part 27, Clause 27.50

### 2.1.2 Equipment Under Test and Modification State

SHV31 S/N: IMEI 004401115315943 - Modification State 0

### 2.1.3 Date of Test

10 November 2014 & 8 December 2014

### 2.1.4 Test Equipment Used

The major items of test equipment used for the above tests are identified in Section 3.1.

### 2.1.5 Test Procedure

The test was applied in accordance with the test method requirements of FCC CFR 47 Part 2.1046 and KDB 971168, clause 5.2.3.

#### Carrier Power

The path loss between the EUT and the Power Meter was measured using a Network Analyser. The EUT was connected to a wideband RF average Power Meter via a cable, attenuator and combiner. The recorded path loss was entered as an offset on the Power Meter. The other port of the combiner was connected to a wideband communications tester.

Measurements were performed with the EUT operating at maximum power on bottom, middle and top frequencies on QPSK and 16-QAM modulation schemes with all resource blocks and a single resource block positioned at the low, middle and high position for each channel bandwidth.

The average power was then recorded as shown in the following tables.

#### Peak to Average Ratio

The path loss between the EUT and the Spectrum Analyser was measured using a Network Analyser. The EUT was connected to a Spectrum Analyser via a cable, attenuator and combiner. The recorded path loss was entered as a reference level offset on the Spectrum Analyser. The other port of the combiner was connected to a wideband communications tester.

Using the CCDF of the spectrum analyser and the procedure defined in KDB 971168, section 5.7.1, the peak to average ratio was recorded, the measurement was repeated ten times and the highest result was recorded as shown in the tables below.

Measurements were performed with the EUT operating at maximum power on bottom, middle and top frequencies on QPSK and 16-QAM modulation schemes with all resource blocks and a single resource block positioned at the low, middle and high position for each channel bandwidth.

### Effective Radiated Power

Measurements of the fundamental from the EUT were obtained with the Measurement Antenna in both Horizontal and Vertical Polarisations. The fundamental frequency was maximised by adjusting the antenna height, antenna polarisation and turntable azimuth. A peak detector was used with the trace set to max hold. The maximum result was recorded.

The mast and controller were then returned to the positions which gave the maximum result. The Spectrum Analyser detector was set to rms and configured to integrate the power over the entire emission bandwidth to give the total output power.

The EUT was then removed from the chamber and replaced with a substitution antenna. Using a signal generator the level was adjusted to achieve the same value on the measuring instrument as previously recorded with the EUT. The final result (ERP) was determined by a calculation using the signal generator level, antenna gain and cable loss.

Measurements were performed in the configuration that yielded the highest conducted RF output power for every supported modulation scheme on each bandwidth, as determined in the tables below. The measurements were performed at a 3m distance unless otherwise stated.

#### **2.1.6 Environmental Conditions**

|                     |               |
|---------------------|---------------|
| Ambient Temperature | 19.2 - 20.6°C |
| Relative Humidity   | 27.0 - 46.8%  |

**2.1.7 Test Results**

4.0 V DC Supply

**Conducted Power**

**Remarks**

Some resource block configurations were identified as being a lower power and therefore were not tested.

**Limit Clause 27.50 (c)(10)**

Portable Stations: <3 W

Product Service

## **2.2 MODULATION CHARACTERISTICS**

### **2.2.1 Specification Reference**

FCC CFR 47 Part 2, Clause 2.1047(d)

### **2.2.2 Equipment Under Test and Modification State**

SHV31 S/N: IMEI 004401115315885 - Modification State 0

### **2.2.3 Date of Test**

18 November 2014

### **2.2.4 Test Equipment Used**

The major items of test equipment used for the above tests are identified in Section 3.1.

### **2.2.5 Test Procedure**

The following plots show a representation of the Modulation Characteristics of an LTE signal as measured from the EUT using the transmitter measurement functionality of a wideband radio communications tester. Both supported modulation schemes of QPSK and 16-QAM with a 10 MHz bandwidth were recorded as shown in the plots below.

### **2.2.6 Environmental Conditions**

|                     |        |
|---------------------|--------|
| Ambient Temperature | 23.3°C |
| Relative Humidity   | 43.3%  |

2.2.7 Test Results

1 Resource Block Allocation

### 25 Resource Block Allocation

### 50 Resource Block Allocation

## 2.3 EMISSION LIMITS

### 2.3.1 Specification Reference

FCC CFR 47 Part 2, Clause 2.1049, 2.1051 and 2.1053  
FCC CFR 47 Part 27, Clause 27.53

### 2.3.2 Equipment Under Test and Modification State

SHV31 S/N: IMEI 004401115315943 - Modification State 0

### 2.3.3 Date of Test

15 November 2014, 8 December 2014 & 11 December 2014

### 2.3.4 Test Equipment Used

The major items of test equipment used for the above tests are identified in Section 3.1.

### 2.3.5 Test Procedure

#### Emission Bandwidth

The Spectrum Analyser was configured to measure the Emission Bandwidth of the EUT. This was performed using the markers at the -26 dBc points in accordance with FCC KDB 971168 clause 4.1. The EUT was tested on Bottom, Middle and Top channels, on all channel bandwidths with QPSK/16-QAM modulation and with all resource blocks and a single resource block positioned at the low, mid and high offsets.

#### Band Edge

The path loss between the EUT and the Spectrum Analyser was measured using a Network Analyser and entered as a Reference Level Offset. The EUT was set to transmit on Maximum Power using a Communications Analyser. Using this instrument, the test channels were configured to the Top and Bottom of the band. The EUT was tested with All Resource Blocks active and with one Resource Block active at the position closest to the Band Edge. The RBW was set to a value of at least 30 kHz as defined in 27.53(g). The detector of the Spectrum Analyser was set to RMS and the result checked against the -13 dBm limit defined in the specification. The results are shown in the following summary tables and plots.

The EUT shall only be used on the channels defined in the summary tables shown in the reports. Any channels above or below the frequencies listed have not been tested and should not be used.

### Conducted Spurious Emissions

In accordance with Part 2.1051 and 27.53, the spurious emissions from the antenna terminal were measured. The transmitter output power was attenuated using a combination of filters and attenuators and the frequency spectrum investigated from 9 kHz to 8 GHz. The EUT was set to transmit on full power with QPSK and 16-QAM modulation schemes. The EUT was tested on Bottom, Middle and Top channels on all channel bandwidths with All Resource Blocks active and for a single resource block with the offset that yielded the highest conducted output power. The resolution and video bandwidths were set to 100 kHz and 300 kHz with the spectrum analyser detector set to Peak and trace to Max Hold.

From 9 kHz to 1.5 GHz, an attenuator was used. For measuring the range 1.5 GHz to 8 GHz an attenuator and high pass filter were used. This was to reduce saturation effects in the spectrum analyser. The maximum path loss across the measurement bands were used as reference level offsets to ensure worst case.

### Radiated Emissions

A preliminary profile of the Spurious Radiated Emissions was obtained up to the 10th harmonic by operating the EUT on a remotely controlled turntable within a semi-anechoic chamber. Measurements of emissions from the EUT were obtained with the Measurement Antenna in both Horizontal and Vertical Polarisations. The profiling produced a list of the worst-case emissions together with the EUT azimuth and antenna polarisation.

Using the information from the preliminary profiling of the EUT, the list of emissions was then confirmed or updated under Alternative Open Site conditions. Emission levels were maximised by adjusting the antenna height, antenna polarisation and turntable azimuth.

The EUT was set to transmit on maximum power on for QPSK and 16-QAM on each supported bandwidth. The EUT was only tested for the resource block allocation/offset determined to give the highest ERP.

For any emissions found the EUT was then removed from the chamber and replaced with a substitution antenna. Using a signal generator the level was adjusted to achieve the same value on the measuring instrument as previously recorded with the EUT. The final result was determined by a calculation using the signal generator level, antenna gain and cable loss.

The measurements were performed at a 3m distance unless otherwise stated.

## 2.4 FREQUENCY STABILITY

### 2.4.1 Specification Reference

FCC CFR 47 Part 2, Clause 2.1055  
FCC CFR 47 Part 27, Clause 27.54

### 2.4.2 Equipment Under Test and Modification State

SHV31 S/N: IMEI 004401115315885 - Modification State 0

### 2.4.3 Date of Test

20 November 2014

### 2.4.4 Test Equipment Used

The major items of test equipment used for the above tests are identified in Section 3.1.

### 2.4.5 Test Procedure

The EUT was configured to transmit on all resource blocks with a 10 MHz channel bandwidth on the middle channel, 710.0 MHz. In accordance with 2.1055, the temperature was varied from +50°C to -30°C in 10° steps. These measurements were performed with voltage set to nominal as declared by the manufacturer. The frequency error was recorded using the measurement function of the communications test set.

At 20°C, the EUT supply voltage was also reduced to the end point voltage as declared by the manufacturer and the frequency error recorded.

The test results were reviewed and compared with the Band Edge measurement results to ensure that the fundamental remained within the authorised frequency band of operation. It was confirmed that the EUT complied with this requirement.

### 2.4.6 Environmental Conditions

|                     |        |
|---------------------|--------|
| Ambient Temperature | 19.8°C |
| Relative Humidity   | 41.6%  |
