2.6.2 Equipment Under Test and Modification State

S/N: IMEI 004401115303360 - Modification State 0

2.6.3 Date of Test

1 December 2014

2.6.4 Test Equipment Used

The major items of test equipment used for the above tests are identified in Section 3.1.

2.6.5 Test Procedure

The EUT was set to transmit at maximum power on bottom and/or top channels in the band of operation on the data rate pre-determined to give the highest level of average output power.

The EUT was connected to a spectrum analyser via a cable and attenuator and the resultant trace was displayed on screen with the operating band edges shown as an emission limit of -27dBm/MHz to ensure the emission is maintained with the band of operation.

Measurements were made at ambient and extremes of the manufacturer declared temperature range with the maximum and minimum end point battery supply voltages declared by the manufacturer.

The EUT was stabilised at each temperature variation prior to measurements being made.
