

Full operating description

-This device, LC-15L1U, is a television set which consists of two units, a wireless center and a main unit. The wireless center is operating as a tuner of a television set and the main unit as a monitor. These units communicate each other to transmit video signals, audio signals and operating information using with 2.4GHz frequency band SS wireless transmission system.

-The wireless center receives a broadcast signal, or a video signal and a sound signal from the other equipment as a video recorder, DVD recorder or HDD recorder etc. The video signal and the audio signal are transmitted by the SS TX unit in the wireless center.

-The main unit receives above signals from the wireless center through the SS RX unit. Then the main unit indicates the video signal on LCD screen and sounds by its loud speakers. We use the button on the top of main unit or the remote control gun toward the main unit to operate LC-15L1U. At this point the main unit transmits the instruction signals through the SS RX unit to change a television channel and so on.

1) Wireless center:

- Receiving broadcast television signal and AV signals from other devices.
- Input terminals: antenna, composite video, audio, S-video
- Output terminals: antenna, Video control (to control other devices with infrared controller)
- Operating by AC power with its AC adapter.

2) Main unit

- Operating as a monitor that shows a picture on its LCD screen (approximately 15inches diagonal).
- Input terminals: composite video, audio, S-video
- Output terminal: Headphone
- Operating by AC power with its AC adapter and DC power with its rechargeable battery. A charger is included in this unit.
- Operating to select channel and to control sound and picture is able to do with the switches on this unit or its infrared remote control unit.
