### ENGINEERING STATEMENT

The measurements shown in this report were made in accordance with the procedures described on test pages. All reported testing was carried out on a sample equipment to demonstrate compliance with FCC CFR 47 Part 96. The sample tested was found to comply with the requirements defined in the applied rules.

### **1.3 CONFIGURATION DESCRIPTION**

#### **1.3 CONFIGURATION DESCRIPTION**

The NOKIA 7705 SAR-HMC NA (3HE12473AAA) LTE Test Model according to Table 3 in Band 48 (3550 MHz – 3700 MHz).

The LTE Test Models (as defined in 3GPP TS 36.141) were used to represent QPSK, and 16QAM modulation, respectively.

TX test cases: Maximum Conducted Output Power, Maximum Power Spectral Density, Spurious Emissions at Antenna Terminals ( $\pm 1$  MHz) and Conducted Spurious Emissions, measurements were performed on the RF Port. All testing was performed with the EUT transmitting at maximum RF power unless otherwise stated.

The EUT was powered via Nokia HV powers supply.

## 1.4 DECLARATION OF BUILD STATUS

Table 2 – Declaration

| MAIN EUT                                                                      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

| TECHNICAL DESCRIPTION (a brief description of the intended use and operation) | The Nokia 7705 SAR-Hm series includes feature-rich IP/MPLS service routers in a ruggedized and compact platform. With these routers, operators are able to support IP VPN, VPLS, and VPWS services over wireless networks, enabling an end-to-end, seamless, IP/MPLS service offering between wireless and wired devices. This enables critical infrastructure operators to fully realize the promise of smart grids, smart cities, and public safety mobile broadband to enhance safety, efficiency and responsiveness. The 7705 SAR-Hm series can be used in fixed or mobile locations for a variety of applications, such as supervisory control and data acquisition (SCADA), security monitoring, workforce voice and data connectivity in offices or vehicles, mass transit, fleet management, and vehicle remote control and monitoring. |

## 1.5 PRODUCT INFORMATION

### 1.5.1 Technical Description

The Equipment Under Test (EUT) NOKIA 7705 SAR-HMC NA (3HE12473AAA) is an Nokia radio Unit working in the public mobile service (3550-3700 MHz) band which provides communication connections to (Band) network. The NOKIA 7705 SAR-HMC NA (3HE12473AAA) operates from a Nokia HV PSU 100V-240V.

The Equipment Under Test (EUT) is shown in the photograph below. A full technical description can be found in the Manufacturer's documentation.

EUT – 3D Rendering

## 1.5.2 EUT configurations

Table 3 – EUT Test Configurations

| Test No. | BW (MHz) | Resource Block | Resource Block Offset | MOD    | Test No. | BW (MHz) | Resource Block | Resource Block Offset | MOD    |
|----------|----------|----------------|-----------------------|--------|----------|----------|----------------|-----------------------|--------|
| 1        | 20       | 1              | 0                     | QPSK   | 29       | 10       | 1              | 0                     | QPSK   |
| 2        |          | 1              | 49                    |        | 30       |          | 1              | 25                    |        |

### 1.5.4 Frenquency List

Table 4 – EUT Frequency per BW

| BW(MHz) | Lowest<br>(MHz) | Middle<br>(MHz) | Highest<br>(MHz) |
|---------|-----------------|-----------------|------------------|
| 20      | 3560.0          | 3625.0          | 3690.0           |
| 15      | 3557.5          | 3625.0          | 3692.5           |
| 10      | 3555.0          | 3625.0          | 3695.0           |
| 5       | 3552.5          | 3625.0          | 3697.5           |

Product Service

### 1.5.5 Worst-Case Scenario

Testing was performed for all configurations. All EUT configurations were measured and only the worst-case scenario for each measurement is presented in graph format.

Table 5 – Worst Case QPSK of Power Conducted Measurements of Table 3

| 20MHz      |             | 15MHz      |             | 10MHz      |             | 5MHz       |             |
|------------|-------------|------------|-------------|------------|-------------|------------|-------------|
| (dBm/1MHz) | (dBm/10MHz) | (dBm/1MHz) | (dBm/10MHz) | (dBm/1MHz) | (dBm/10MHz) | (dBm/1MHz) | (dBm/10MHz) |
| 6.81       | 16.87       | 7.93       | 18.03       | 10.98      | 20.42       | 12.91      | 19.34       |

## 1.6 TEST SETUP

Product Service

## 1.7 TEST CONDITIONS

For all tests the EUT was set up in accordance with the relevant test standard and to represent typical operating conditions. Tests were applied with the EUT situated in a shielded enclosure, test laboratories or a chamber as appropriate.

FCC Measurement Facility Accreditation Designation Number: CA6845  
TUV SUD Canada (Ottawa)

## 1.8 DEVIATION FROM THE STANDARD

No deviations from the applicable test standards or test plan were made during testing.

## 1.9 MODIFICATION RECORD

No modifications were made to the EUT during testing.

## 1.10 ALTERNATIVE TEST SITE

Under our Accreditation, TÜV SÜD Canada, Laval conducted the following tests at Nokia in Ottawa.

| Test Name                                                    | Name of Engineer(s) |
|--------------------------------------------------------------|---------------------|
| Peak Output Power and Peak to Average Ratio – Conducted, PSD | Jose Martinez       |
| Occupied Bandwidth                                           | Jose Martinez       |
| Band Edge                                                    | Jose Martinez       |
| Transmitter Spurious Emissions                               | Jose Martinez       |
| Frequency Stability                                          | Jose Martinez       |
| Radiated Emissions                                           | Christopher Richer  |

## **SECTION 2**

### **TEST DETAILS**

Product Service

## **2.1 PEAK OUTPUT POWER AND PEAK TO AVERAGE RATIO - CONDUCTED**

### **2.1.1 Specification Reference**

FCC CFR 47 Part 2, Clause 2.1046  
FCC CFR 47 Part 96, Clause 96.41 (b)(c)(g)

### **2.1.2 Date of Test and Modification State**

14 January 2021 – Modification State 0  
03 February 2021 – Modification State 0

### **2.1.3 Test Equipment Used**

The major items of test equipment used for the above tests are identified in Section 3.1.

### **2.1.4 Environmental Conditions**

|                     |      |
|---------------------|------|
| Ambient Temperature | 21°C |
| Relative Humidity   | 20%  |

### **2.1.5 Test Method**

All measurements were made in accordance with FCC KDB 971168 D01, clause 5.2.1 and summed in accordance with FCC KDB 662911 D01. EIRP values were calculated by adding the Port A and Port B antenna gain of 2.6 dBi and the Port C and Port D antenna gain of 3.1 dBi

The major items of test equipment used for the above tests are identified in Section 3.1.

### **2.3.4 Environmental Conditions**

|                     |      |
|---------------------|------|
| Ambient Temperature | 23°C |
| Relative Humidity   | 15%  |

### **2.3.5 Test Method**

All measurements were made in accordance with FCC KDB 971168 D01.

The EUT was connected to a Spectrum Analyser via an attenuator and switching box. The path loss between the EUT and the Spectrum Analyser was measured using a Network Analyser. The measured path loss was entered as a Reference Level Offset in the Spectrum Analyser. The Spectrum Analyser RBW was adjusted to be at least 1% of the measured 26dB Bandwidth. Using an RMS detector, the frequency spectrum up to 1MHz away from the Band Edge was investigated.

The worst-case scenarios are given in Table 7: 20MHz OBW (test case No.7 & No.14); for 15MHz OBW (test case No.21 & 28); for 10MHz OBW (test case No.35 & 42) and for 5MHz OBW (test case No. 49 & 56).

## **2.4 TRANSMITTER SPURIOUS EMISSIONS**

### **2.4.1 Specification Reference**

FCC CFR 47 Part 2, Clause 2.1051  
FCC CFR 47 Part 96, Clause 96.41 (e)(1)

### **2.4.2 Date of Test and Modification State**

17 November 2021 - Modification State 0  
18 November 2021 - Modification State 0

### **2.4.3 Test Equipment Used**

The major items of test equipment used for the above tests are identified in Section 3.1.

### **2.4.4 Environmental Conditions**

|                     |      |
|---------------------|------|
| Ambient Temperature | 23°C |
| Relative Humidity   | 35%  |

### **2.4.5 Test Method**

All measurements were made in accordance with FCC KDB 971168 D01. The EUT was connected to a Spectrum Analyser via an attenuator and switching box. Prior to testing, a Network Analyser was used to calibrate the path loss between the EUT and the Spectrum Analyser. The worst-case path loss in the measured ranges was entered as a reference level offset. Over the measured ranges, the RBW was set to 1MHz with a VBW of 3MHz. All measurement results are specified as average with an RMS detector being used in conjunction with a trace setting of Max Hold. Measurements were performed in configurations of the EUT as reported below.

Testing was performed with a test limit of -40 dBm/MHz (for emissions < 3530 MHz and > 3720 MHz).

Testing was performed on this port with a test limit of -25 dBm/MHz (for emissions within 10 MHz of the carrier).

The worst-case test cases were: No.1; 3;5;7;9;11 and 13.

## 2.4.6 Test Results

Maximum Output Power 18 dBm

| Range Frequency (MHz)                                                                                                     | Limit (dBm) | Result           |
|---------------------------------------------------------------------------------------------------------------------------|-------------|------------------|
| 0.009 to 3530                                                                                                             | -40         | Pass<br><Note 1> |
| 3530 to 3650                                                                                                              | -25         | Pass             |
| 3650 to 3660                                                                                                              | -13         | Pass             |
| 3700 to 3710                                                                                                              | -13         | Pass             |
| 3710 to 3720                                                                                                              | -25         | Pass             |
| 3720 to 40000                                                                                                             | -40         | Pass<br><Note 2> |
| Note 1. The device was scanned from 9kHz to 3530MHz with no emission (peak values less than 6Bd from the limit) was found |             |                  |
| Note 2. The device was scanned up to 40Ghz with no emission (peak values less than 6Bd from the limit) was found          |             |                  |

## **2.6 RADIATED EMISSION**

### **2.6.1 Specification Reference**

FCC CFR 47 Part §2.1051  
FCC CFR 47 Part 96.41

### **2.6.2 Date of Test and Modification State**

22 November 2021 – Modification State 0  
23 November 2021 – Modification State 0  
23 February 2022 – Modification State 0

### **2.6.3 Test Equipment Used**

The major items of test equipment used for the above tests are identified in Section 3.1.

### **2.6.4 Environmental Conditions**

|                     |        |
|---------------------|--------|
| Ambient Temperature | 23.1°C |
| Relative Humidity   | 13.4%  |

### **2.6.5 Test Method**

All measurements were made in accordance with:

- 971168 D01 Power Meas License Digital Systems v03r01 Clause 5.6
- 971168 D01 Power Meas License Digital Systems v03r01 Clause 7

Measurements were performed in configurations of the EUT as reported below. Testing was performed with RF on with a test limit of FCC 15 Subpart B Class A at 3m.

### 3.2 MEASUREMENT UNCERTAINTY

For a 95% confidence level, the measurement uncertainties for defined systems are:-

| Test Discipline                     | Frequency / Parameter      | MU           |
|-------------------------------------|----------------------------|--------------|
| Conducted Maximum Peak Output Power | 30 MHz to 20 GHz Amplitude | $\pm 0.1$ dB |
| Conducted Emissions                 | 30 MHz to 20 GHz Amplitude | $\pm 2.3$ dB |
| Frequency Stability                 | 30 MHz to 2 GHz            | $\pm 5.0$ Hz |
| Occupied Bandwidth                  | Up to 20 MHz Bandwidth     | $\pm 1.1$ Hz |
| Band Edge                           | 30 MHz to 20 GHz Amplitude | $\pm 2.3$ dB |
