

HyperDrive UDMA3

FCC Statement

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions:(1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

The device has been evaluated to meet general RF exposure requirement. The device can be used in portable exposure condition without restriction.

Sanho Manufacturer's Limited Liability

Sanho warrants to the end user, that this product, excluding its content and / or software supplied with or on the product, will be free from material defects in the manufacture, will conform to Sanho's published product specifications and be fit for normal use during the Warranty Period specified below, commencing on the date of purchase provided that the product is legally purchased on the market.

To make a warranty claim please contact Sanho at the telephone number below or at support@hypershops.com within the warranty period and provide proof of purchase (showing date and place and name of the reseller) and product name, type and number. You may return the product after obtaining a Return Material Authorization number and following any other guidelines provided by our customer support. For further information, see www.hypershops.com. Sanho may at its option repair this product or provide you with an equivalent replacement. Sanho will not be liable for indirect or consequential (including loss of data) , or for damage caused by improper use(including use with an incompatible device) and use not in accordance with the instructions), or by improper installation, unprofessional repair, modification or accident. This constitutes Sanho's entire liability, which will never exceed the price you paid for it, plus the necessary costs you made for the warranty claim.

Sanho products must not be used in applications where failure could threaten injury or life, such as life support systems.

National, state and local laws may grant you other rights that are not affected by this warranty.

Warranty Period: 1 Year

Sanho Corporation
47456 Fremont Blvd.
Fremont CA 94538, U.S.A
Tel: +1(408)737-7878

Additional terms and conditions can be found at www.hypershops.com

Usage of this product constitute acceptance of these terms and conditions.

Safety Operation Instructions

We recommend user to test device before first use to familiarize with the functions and to ensure that device functions as per published specifications.

Do not replace the internal battery in the battery compartment. The device is installed with internal battery that is certified safe and compatible by the manufacturer. Replacing with incompatible battery may result in short circuit and fire hazard. Please contact Sanho for the battery compartment assembly replacement instead.

Do not use the device in a moist environment and do not handle the device if your hands are wet. If liquid enters the device, please immediately power off the device, remove the battery, and send it back to the dealer for repair. Never try to use a device that has been corroded by liquid, as it may result in short circuit and cause fire.

Carefully power off the device and remove the battery if the device produces odd smell, extreme heat and smoke. Handle with care, as the device may be very hot.

If you are not using the original AC charger provided, please make sure your charger has an output up to 10W and certified safe by your country safety commission.

The device may be hot while charging. Please charge the device in a ventilated area.

Power off the device before opening the back cover and installing or removing the hard drive.

Do not place the device near heavily magnetized object. Otherwise, data may be lost.

Select 'OK' button to start Import,
Press the 'Left' or 'Right' button
to select Import option.

Import All: Copy all files from Source to Destination Folder
Incremental Import: Copy only new files created from the Source to the Destination Folder

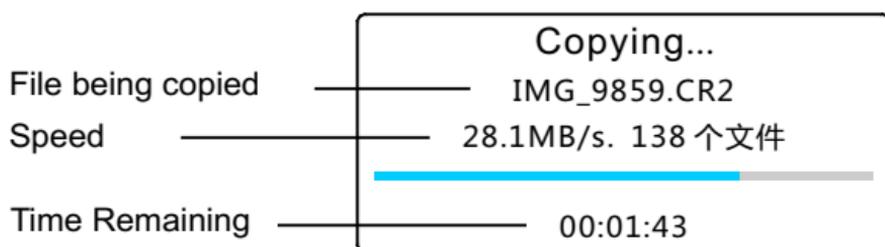

Select the Menu button. The Settings Menu will pop up allow user to Change Source, Change Destination, Select Visual Import Setting, File Verification Setting, Folder Name Setting.

Import

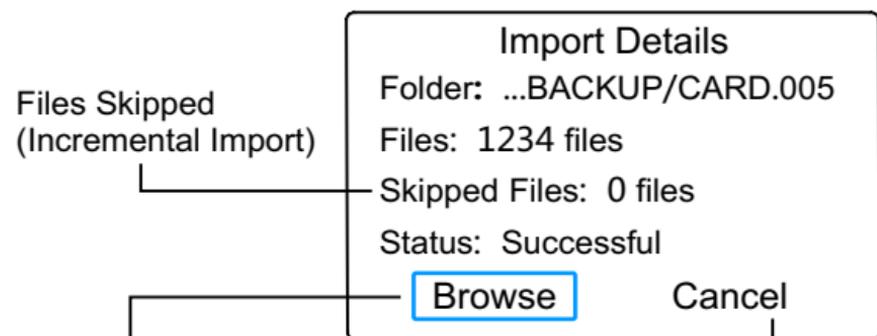

Import All

When 'Import All' is selected, a new Folder will be created in the destination location. You can define the Folder Naming Rule, i.e. name according to sequential number of based on date.

The screen will display the import progress during the operation.

Upon completion, the screen will display Import Details.

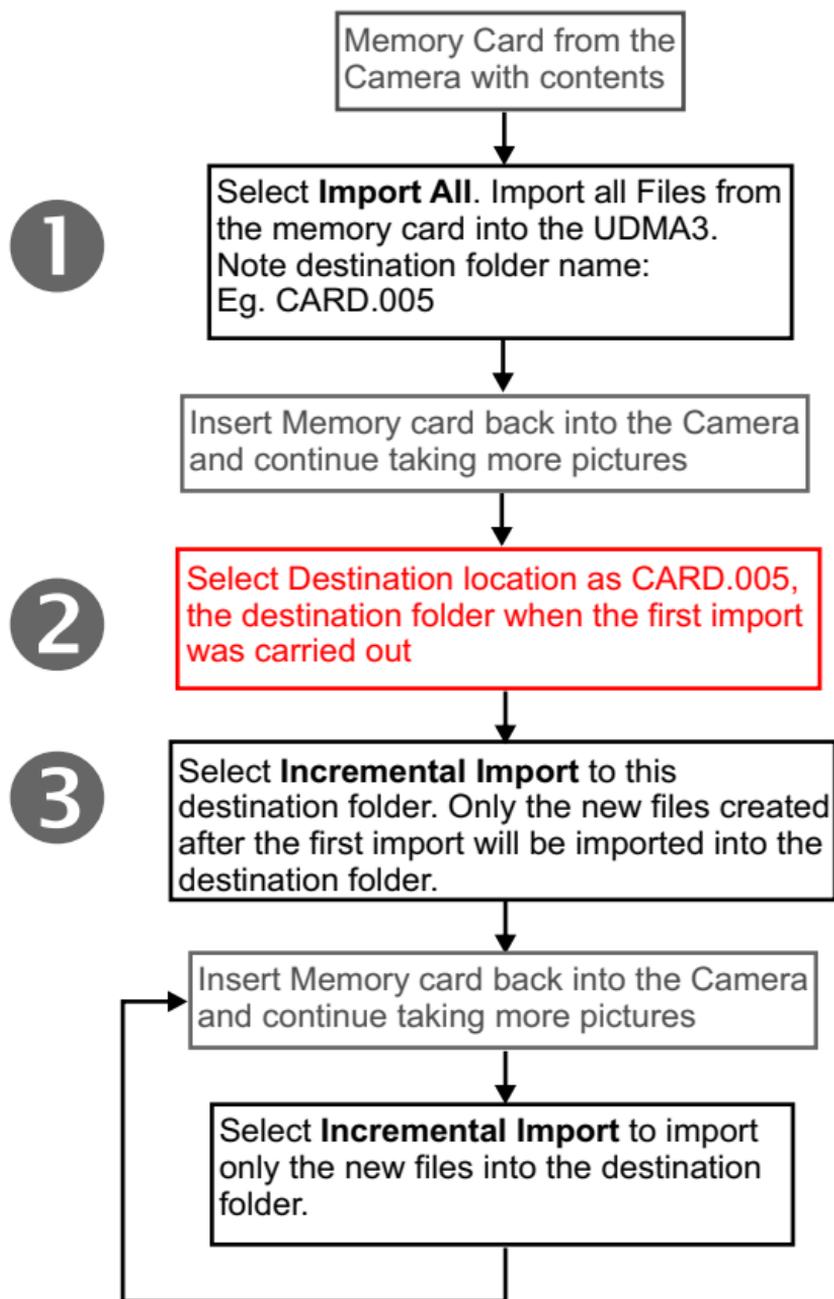

Press 'OK' button to start browsing the files, Select the Left or Right button to change your option. Select 'Cancel' to return to the Main Menu.

If 'Import All' is selected and carried out twice from the same memory card, two folders will be created in the destination location on each operation, and the files will be imported twice, utilizing twice the memory space in the destination location.

Import

Incremental Import Defined

For Incremental Import, the device will first identify if the file to be copied exists in the destination location (by identifying the file name). If the file is already existing in the destination location, the device will skip this file and move on to another file.

☰ Menu	⊕ Select ⊕ Start

Select 'OK' to start import.

Use the 'Left' and 'Right' button to change import method.

Downloading photos from Memory Card used on Camera: While using Incremental Import, always define a NEW destination folder whenever the memory card has been reformatted to capture new pictures. The camera repeats file names when capturing picture files in a newly reformatted memory card.

In Incremental Import mode, the system will skip importing file names that already exist in the destination folder.

Using a new destination folder will ensure that the system does not skip importing any file by error.

Import

Data Verification

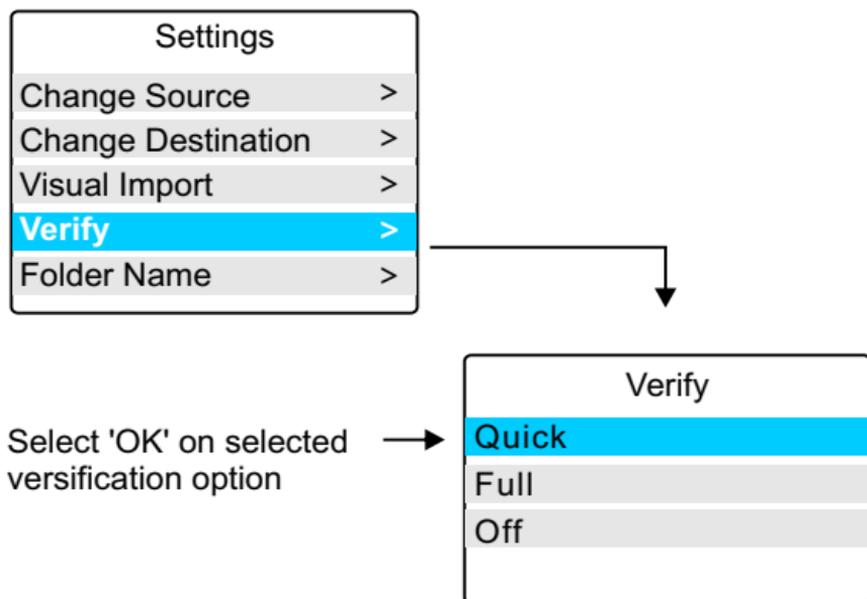

Data security is paramount importance to every user. The UDMA3 is able to securely import and store data. Also, the UDMA3 provides the Verification feature to verify that the data is imported correctly by comparing the data from the source to the imported data into the destination location. You can select:

Quick Verification:

Verify only the first 2M header of every files. If the file is less than 2M header, complete verification will take place.

Full Verification:

Complete data verification of the entire file.

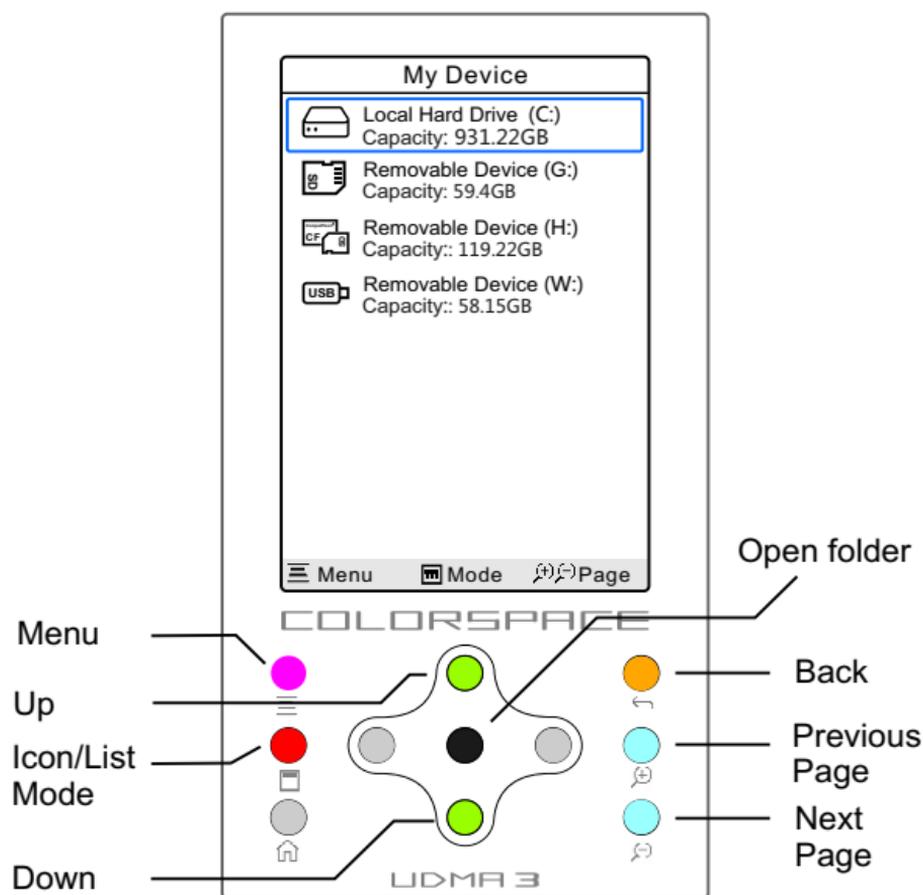

Data Verification DOES NOT prevent data loss as a result of hard drive defect or computer defect. Please do extra back up of important data in a different device.

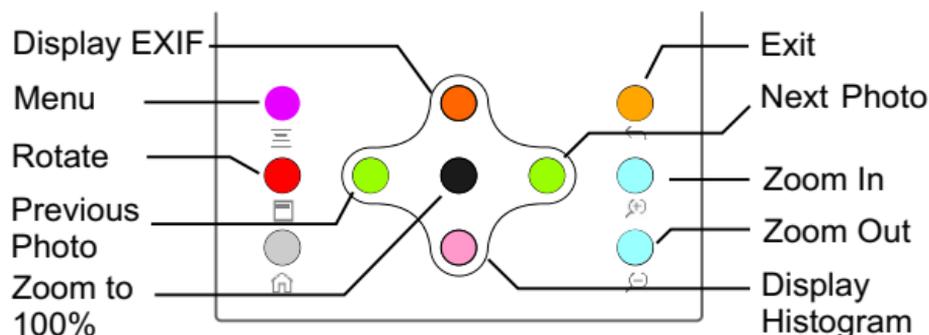

File Manager

Basic Operations

From the Main Menu, select 'File Manager'

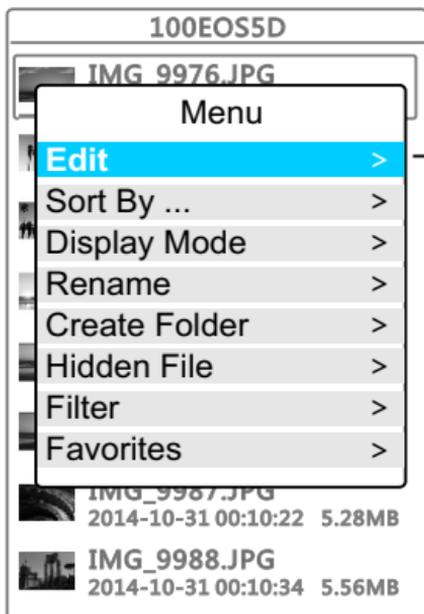

When browsing photo, select a photo by pressing the 'OK' button. Once you are in the photo, navigate as follow:

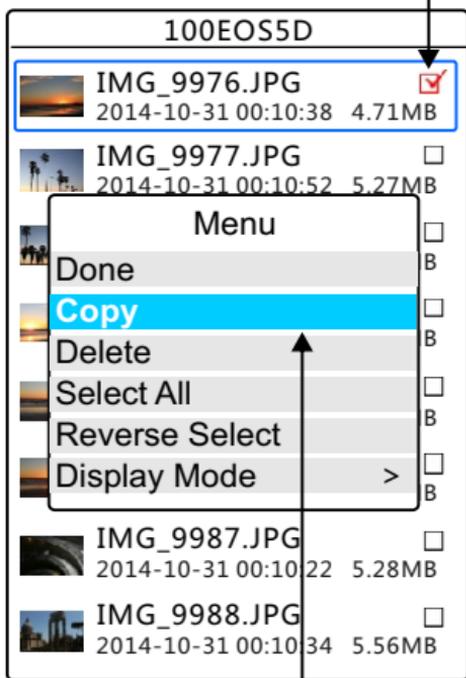

File Manager

Copy/Paste File

In the File Manager list, press the \equiv button. A sub-menu page will pop up. Select 'Edit'.

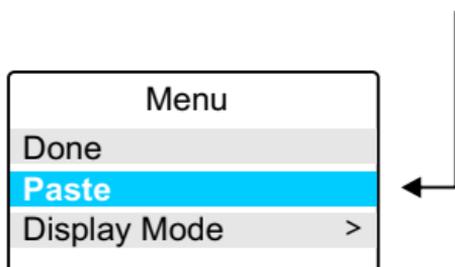

In the Edit mode, a check box will show on the right of each file.

Select the files to be edited, press 'OK' to mark the check box on selected files. Press the \equiv button, and select 'Copy'.

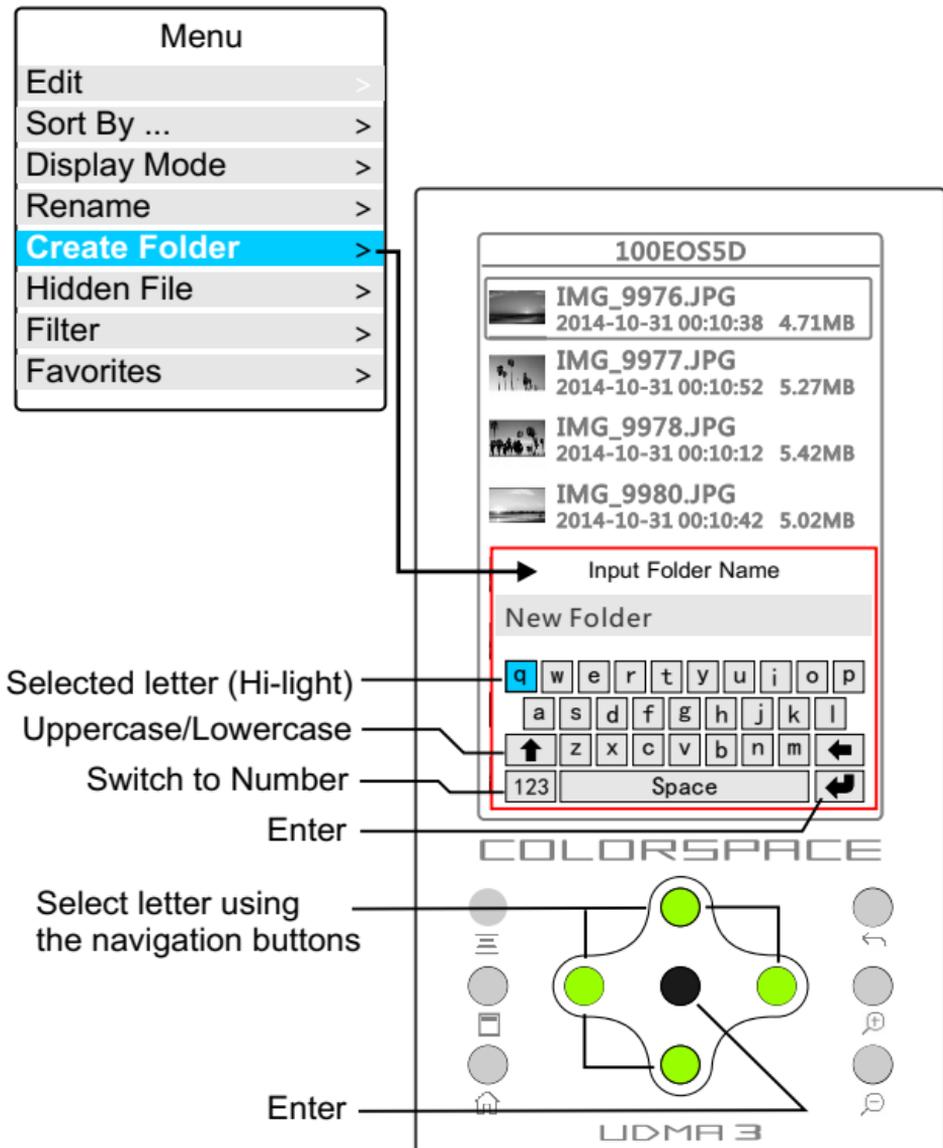

Next, browse for the destination folder, press the \equiv button, Select 'Paste'

File Manager

Create New Folder

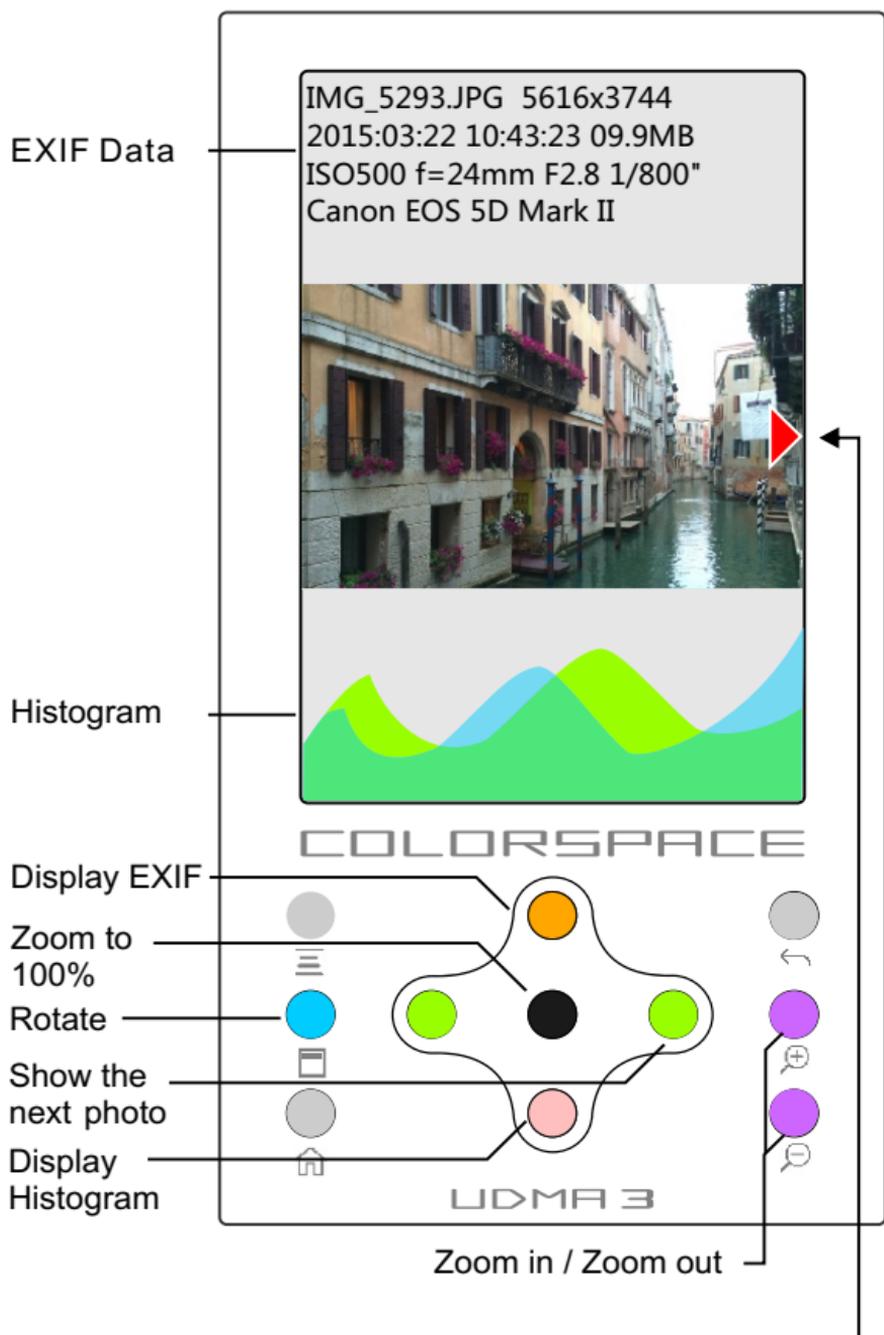

In the File Manager list, press the  button, select 'Create Folder'

Input a new folder name by typing on the keyboard with the navigation buttons and 'OK' button.

Browser

Select a photo for viewing. When the photo is display in full screen, you can use keypad button to browse the photo as follow:

Right arrow: The next picture has already been loaded and ready to view. Press the 'Right' button to view the next photo.

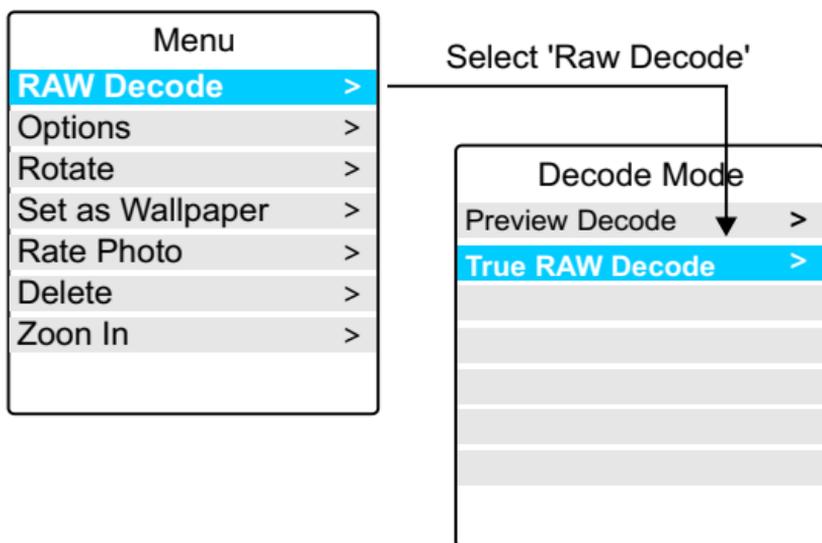

Browser

Decoding Raw File

A Professional Camera photo has two sets of data for each photo file. A reduced size photo file for quick preview and a true RAW photo file that contains all data captured from camera sensor.

UDMA3 is able to decode RAW data from the camera sensor contained within a RAW photo.

When browsing a RAW photo, press the ☰ button,

Due to the large size of a RAW file, the decoding process may take a couple seconds. For example, a CR2 format photo from Canon 5D Mark II may take only 3s to load the preview photo but takes 43s to decode the RAW photo.

A decoded RAW photo color may look slight different from the preview photo as the color have not been corrected in a decoding process.

Sync with External Hard Drive

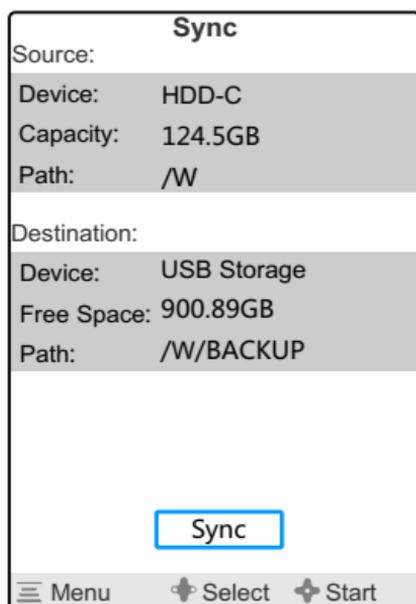

The UDMA3 data can be backed up and sync with another portable hard drive. During the one-way sync process, from the UDMA3 to another external portable hard drive, if a same filename is detected in the external hard drive, the file will not be copied to the external hard drive.

We recommend syncing your data to another hard drive periodically for extra back up.

Connect a FAT32 portable hard drive to the USB port on the UDMA3:

You can format the external hard drive to FAT32 format using the UDMA3.

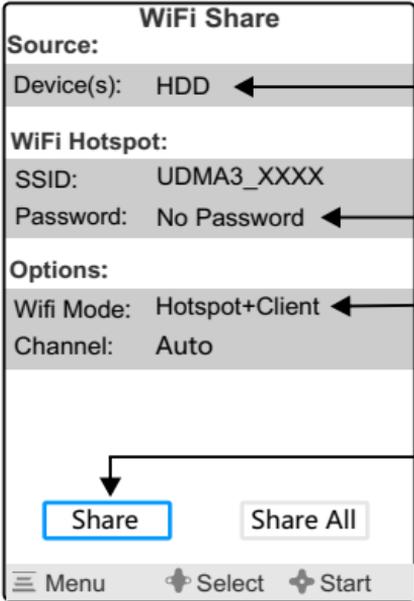

On the Main Menu, select 'Sync'. In the Sync Menu, make sure the source and destination location is correct. Select 'OK' to start syncing.

Connect external power to UDMA3 during the Sync process.

Wireless File Sharing

Using WiFi File Sharing

The UDMA3 has a WiFi wireless file sharing capability by creating its own WiFi hotspot. You can access the data in the UDMA3 via mobile devices link smart phones, tablets and laptops. From the Main Menu select 'WiFi'

Only devices listed here will be share.

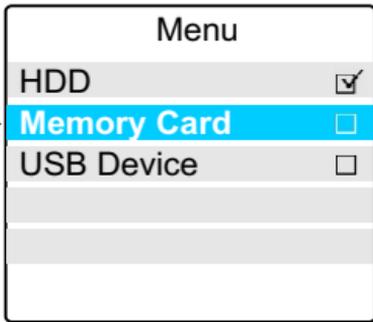

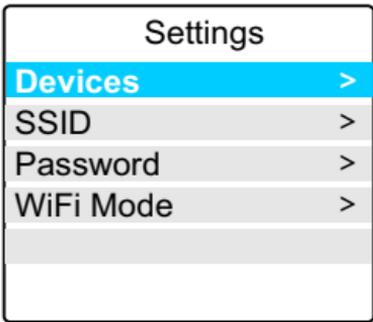

Data owner can set password to restrict access

'Client' mode allow user to join a wireless network

To conserve power, the system will by default only share files in the internal hard drive.

You can choose to share all devices. This would consume more power and reduce UDMA3 working duration though.

Press button,select 'Device', then select devices that you wish to share wirelessly.

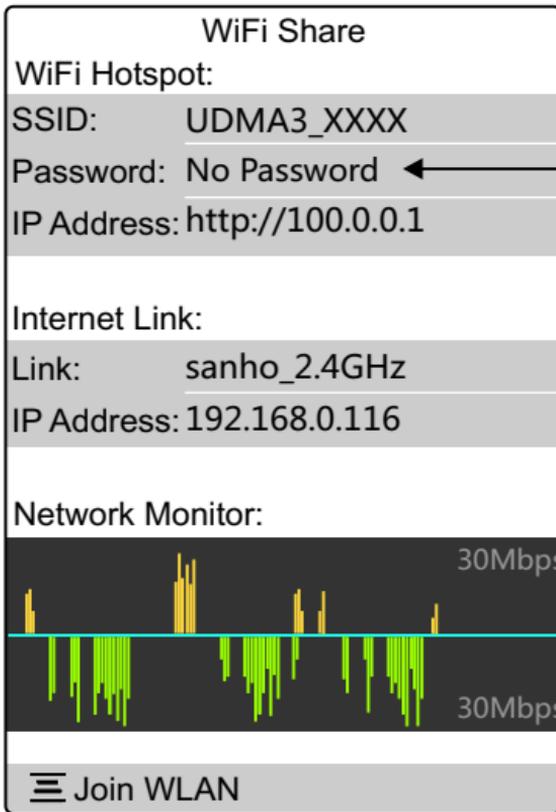

Wireless File Sharing

WiFi Data Sharing Status

Once the system is in the WiFi data-sharing mode, the screen will then display the following:

Ad-hoc WiFi hot spot created by UDMA3. Mobile devices and computer can access the data in UDMA3 via the Ad-hoc WiFi hot spot. There is no need for existing WiFi Internet in order for this feature to work.

You can set password for secure access

Join existing WiFi Network at home or at work. Computer and mobile devices in the same network will be able to access the data in UDMA3.

Please be warned that unauthorized person could access data transfer in a WiFi network. Therefore, it is advised to NOT wirelessly share data in a public WiFi network, especially when there is no password access set for the network.

Wireless File Sharing

Connecting to Existing WiFi Network

Press  button to join existing WiFi network. UDMA3 will scan for existing network and show all available networks.

Select a WiFi Network →

Press 'OK' ↓

Key in Password →

Press  once complete

Upper/Lower case ↖

Press  to cancel joining WLAN.

Select Switch Done

Wireless File Sharing

Accessing UDMA3 on mobile devices/computers

On your mobile phone or computer, go to <Settings>

Select <WiFi>, then select the Ad-hoc WiFi network created by UDMA3. For example, in this case is 'UDMA3_E4E6'

Install the iUSBport App in your mobile device to access the UDMA3.

Where App is not available for some devices or computer, the UDMA3 can be accessed via Chrome or Safari browser. Enter the url <http://100.0.0.1> or <ftp://100.0.0.1> in the browser.

Photo Recover

This function can recover photos that have been accidentally deleted from a memory card into UDMA3 at one time.

Select 'Recover' from the Main Menu. The recover photos will be copied and store in the 'Recover' folder in the UDMA3. UDMA3 will not copy the recovered photos back into the memory card.

The following photos format can be recovered by UDMA3:

Camera Model	Photos Format
CANON	CR2/TIF/CRW
NIKON	NEF
PENTAX	DNG/PEF
SAMSUNG	PEF
RICOH	DNG
SONY	SR2/ARW
OLYMPUS	CRF
PANASONIC	RAW
MAMIYA	MEF

Once you have discovered that there are photos in a memory card that has been accidentally deleted, please refrain from using the memory card and try to recover the photos with the UDMA3 immediately. If you have overwritten the memory card with new files, you may not be able to recover the photos.

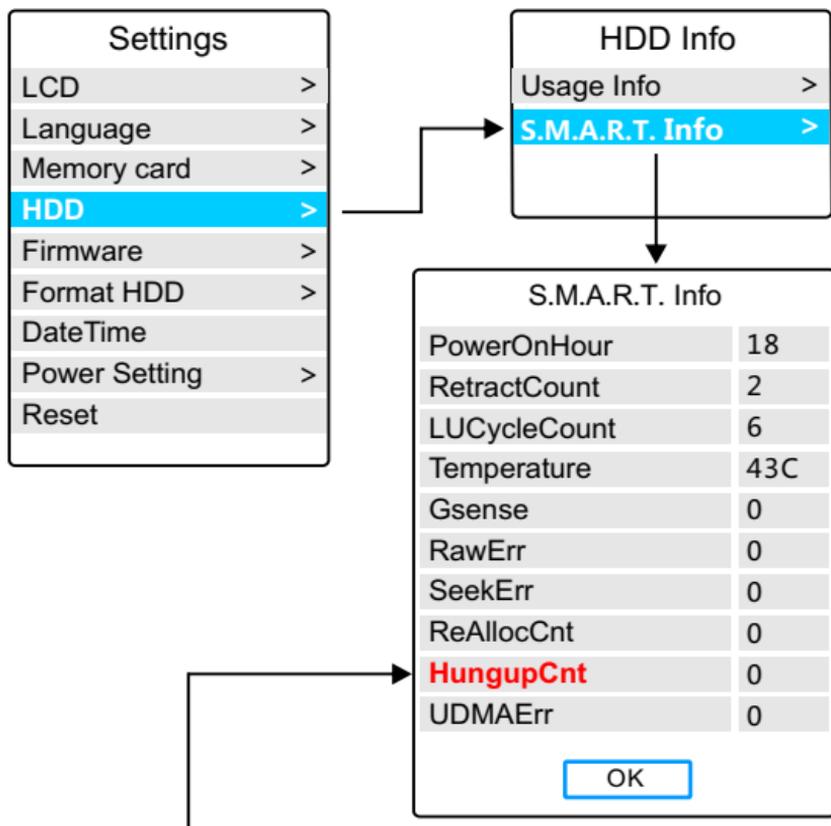

Settings

View Hard Drive S.M.A.R.T. Information

Hard drive conditions may deteriorate overtime from prolong usage. This feature allows user to check the conditions of a mechanical hard drive installed in the UDMA3.

S.M.A.R.T. stands for Self-Monitoring, Analysis and Reporting Technology. This feature detects and records any defect and foreseeable failures of the hard drive and warns user of any failure that may result in data loss.

From the Main Menu, select 'Settings', then 'HDD'

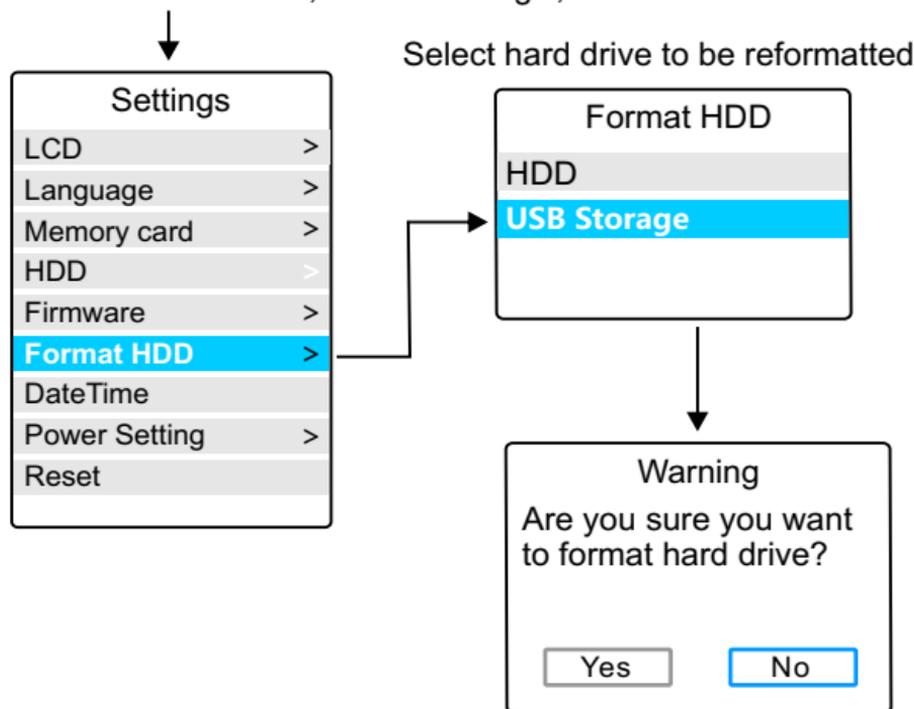

If the 'HungupCnt' reading has exceeded 10 units, please contact customer service and send us the complete S.M.A.R.T. information.

Settings

Formatting Hard Drive

Warning: Reformatting the hard drive will erase all files and data in the hard drive. Please connect the UDMA3 to external power supply if the battery power is low. The hard drive may be damaged if power supply is interrupted during the process.

From the Main Menu, select 'Settings', then 'Format HDD'

The system will prompt you twice to warn you for data loss from reformatting. Select 'Yes' to proceed. Reformatting the hard drive will erase all data and format the hard drive to a single partition FAT32 format.

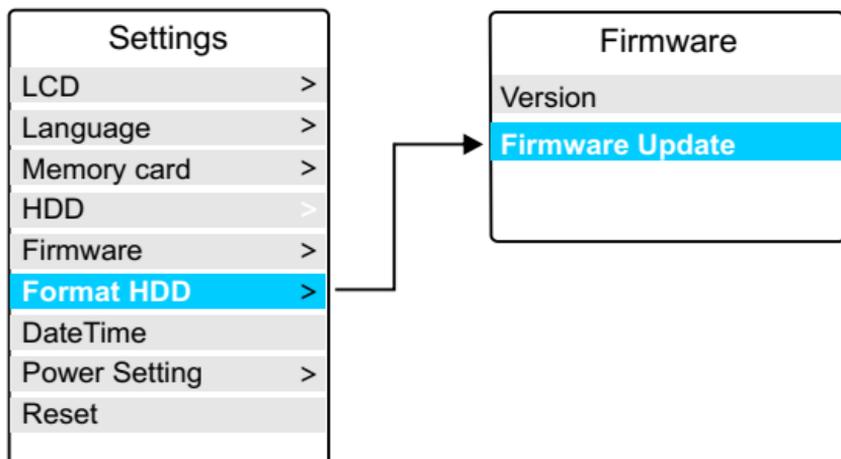

A message will display once completed.

Settings

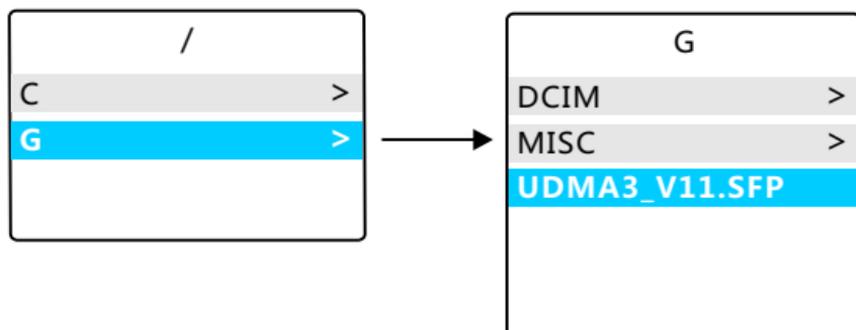

Firmware Upgrade

Please download the latest firmware from www.hyperdrive.com. Store the SPF firmware file in a memory card. Then insert the memory card into UDMA3.

From the Main Menu, select 'Settings'. Then, select 'Firmware' > 'Firmware Update' .

Select the SPF firmware file from the file list window.

Restart the UDMA3 once the firmware upgrade has completed.

Please do not remove the memory card and ensure sufficient battery power or plug in the external power supply. Interruption during firmware upgrade may cause device malfunction.
