Re: **Application for a Class II Permissive Change request to certificated transceiver with FCC ID: AZ489FT4826.**

Gentlemen:

Motorola Inc., 8000 West Sunrise Boulevard, Fort Lauderdale, Florida 33322, herein submits its' request for a Class II Permissive Change for the above transceiver.

An additional family of batteries were designed for use with the above transceiver. The SAR values measured with these new batteries exceed the 3.2 mW/g at the face of the previous filing but are far below the FCC's limit of 8mW/kg. Since SAR values exceed those originally reported to the FCC, this change does not meet the requirements for a Class 1 Permissive Change. However, the performance data conforms to FCC limits, thus meeting the requirements for a Class II Permissive Change.

Please update the FCC files and re-issue the grant with new SAR values at the face of 3.59 mW/g and at the body of 2.30 mW/g.

A SAR EME Compliance Test Report attached contains data showing that all measure SAR values are within FCC limits.

All other data, including Spurious Emissions, reported to the FCC at the time when Certification was granted continues to be compliant.

Please contact me at (954) 723-5793 if you require any additional information.

Sincerely,
