7435 Oakland Mills Road  
Columbia, MD 21046

Re: Form 731 Confirmation Number: EA212052 with FCC ID: AZ489FT4863.

Dear Mr. Dayhoff;

Motorola Inc., 8000 West Sunrise Boulevard, Fort Lauderdale, Florida 33322, herein submits its response to the 5<sup>th</sup> December 2003 request for information in Correspondence Number 26057.

Q1) The RF power measured is 1.1 watts, however the requested RF power on the 731 Form is 726 mW. Please clarify.

R1) The RF power measured at 1.1 Watts is the conducted power into 50 Ohms taken at the antenna port and using a power supply set to the factory test voltage of 3.8V. The RF power listed on the FCC Form 731 of 726 mW is the radiated output power with a fully charged battery. The product has a non-removable integrated antenna and as such the radiated power is being used for grant purposes.

Contact me at (954) 723-5793 if you require any additional information.

Best Regards,
