

11. Environmental Evaluation for RF Exposure.

The subject transmitter is considered to be a Mobile Device per 47 CFR 90.1091 (b). Since any commercially available antennas may be used with this device, some will cause the ERP to exceed 1.5 Watt. The MPE was measured at a separation distance of 20 centimeters. These measurements were performed using the antenna specified in Exhibit 12.2, and the MPE was found to comply with the general population limits of 47 CFR 1.1310.
