Columbia, MD 21046

**Subject: APPLICATION FOR CLASS 2 PERMISSIVE CHANGE TO FCC AUTHORIZED Transceiver
with FCC ID: AZ489FT5836, 806-824MHz/851-869 MHz.**

Dear Sir / Madam,

A permissive change is requested for a 800 MHz Portable (the subject transceiver) which is marketed in the United States and elsewhere.

Motorola has removed Restricted Materials from some components to demonstrate compliance to Environmental Preferred Parts (EPP) requirements per 12G02897W18, Controlled, Restricted and Reportable Materials Disclosure (Rev, J, Appendix C, Section 2) and 12G13933A12, Component Temperature Requirements To Support "PB-Free" Solder and the implementation of non ZIF receiver back end as part of the EPP conversion project. Also, the current ring PA was replaced with the Mitsubishi PA on the transmitter portion as part of the EPP conversion effort.

Performance data on Radiated Spurious Emissions was obtained in accordance with 47 CFR 2.1053. All Spurious Emissions performance measurements were performed at the Motorola Plantation Facility OATS, which is an FCC listed site. Attached results shows that data are within FCC limits but degrade (2Fc) to those in the filing when FCC Certification was originally granted.

All other data, including RF Exposure, reported to the FCC at the time when Certification was granted continues to be compliant.

This radio continues to meet all FCC emissions requirements, including RF Exposure, for which authorization was granted. However, the radiated spurious emissions were degraded to those reported originally to the FCC, thus meeting the requirements a Class 2 Permissive Change.

Sincerely,

/s/ Mike Ramnath (signed)

Mike Ramnath
