Hello Rod,

I just spoke with Rich. Due to the available data, we will not require that you submit data at the tenth harmonic. This is a one time exception. In the future you will need to have equipment capable of testing to the proper frequency range.

Hello Joe,

I have purchased a new EMCO 3160-09, Standard Gain Horn (18 - 26.5 GHz) to eliminate the antenna issue. So the remaining issue is the upper limit of my HP8562A of 22 GHz. The analyzer actually can display up to a little beyond 26 GHz but I don't think the technical spec.'s are guaranteed beyond 22 GHz..

Best Regards,
Rod
