

Information about the Applicant

Company Name	Motorola Inc.
Grantee	Mike Ramnath
Address	8000 West Sunrise Blvd.
City, State, Zip	Ft. Lauderdale, FL 33322
Job Number	SPTE0009
Model	F4421A & F4426A
FCC ID	AZ489FT7008
Agent	Rod Munro
Approval Type	Class II Permissive Change
Equipment Class	Mobile Cellular/PCS GSM Transceiver
Rule Part	22.901(d) and 24E

Overview

Reference cover letter provided by the client. This compliance opinion covers the GSM radio and is one of two compliance opinions, one for the Bluetooth and one for the GSM.

Recommendation

All items have been resolved to my satisfaction; I am therefore recommending this for approval.

Signature

Findings	
Specification	Finding
TCB Exclusion List. Item IId	Item IId of the TCB Exclusion List does not permit TCBs to authorize portable devices that require Occupational/ Controlled Exposure (except for Push-to-Talk radios). The SAR report contains several references to Occupational / Controlled Exposure.
2.1043(b)(2)	The cover letter does not explain the Class II permissive changes made to the "certificated device". More detail is required in the cover letter. If any of the exhibits that were filed with the original application have changed, updated exhibits will be required as well. If any of the new exhibits require confidential treatment (e.g schematics, frequency block diagrams, parts list, theory of operation), a letter requesting confidential treatment of those specific exhibits will be required.

Resolution	
Specification	Resolution
TCB Exclusion List. Item IId	Updated SAR Test Report was provided that included only references to General Population / Uncontrolled Exposure conditions.
2.1043(b)(2)	The applicant's agent supplied an additional cover letter that provided details concerning the Class II permissive change.

Opinions

Opinion: Although the Class II permissive changes have degraded the SAR performance of the subject device, it continues to remain compliant with FCC requirements.

Discussion: The cover letters provided by the applicant and their agent attest that the changes made to the certified device have not altered any of the exhibits filed with the original application except for the SAR test report. The new SAR test report demonstrates compliance with the applicable RF exposure regulations.
