

Electromagnetic Compatibility Test Report

Test Report No: MOT 030208

Issued on: February 03, 2008

Product Name

VoWLAN SR

Tested According to

**FCC 47 CFR, Part 15, Subparts E
IC RSS-210**

Tests Performed for

Motorola Israel Ltd.

3, Kremenitski Street, Tel Aviv, Israel

Test Report details:

Test commencement date: 05.01.2008
Test completion date: 15.01.2008
Customer's Representative: Teddy Neeman
Issued on: 03.02.2008

Assessment information:

This report contains an assessment of the EUT against Electromagnetic Compatibility based upon tests carried out on the samples submitted. The results contained in this report relate only to the items tested. Manufactured products will not necessarily give identical results due to production and measurement tolerances. QualiTech, EMC Lab does not assume responsibility for any conclusion and generalization drawn from the test results with regards to other specimens or samples of type of the equipment represented by test item.

The EUT was set up and exercised using the configuration, modes of operation and arrangements defined in this report only.

Modifications:

Modifications made to the EUT

None

Modifications made to the Test Standard

None

Summary of Compliance Status

WLAN 802.11a

Test Spec. Clause	Test Case	Remarks
47 CFR §15.247 (a) (2) RSS-210 section A8.2 (1)	6 dB Bandwidth	Comply
47 CFR §15.247 (b) (3) & RSS-210 section A8.4 (4)	Maximum Peak Output Power, 2400-2483.5 MHz	Comply

1. General Description

Description of the EUT system/test Item:

Product name: VoWLAN SR

Model: F2978A

FCC ID: AZ489FT7032

IC: 109U-89FT7032

Description:

Single Mode VoWLAN 802.11a/b/g semi-rugged phone

Maximum Peak Output Power:

79.3mW (6Mbps) for WLAN 802.11a Middle and Upper Bands

39.8mW (6Mbps) for WLAN 802.11a Lower Band

Frequency range:

802.11a: 5.15-5.350, 5.470-5.825 GHz

Transmit Data rate:

Protocol	Rate [Mbps]							
802.11a	6	9	12	18	24	36	48	54

Type of Modulation:

Protocol	Modulation
802.11a	OFDM (64QAM, 16QAM, QPSK, BPSK)

Antenna Specification:

Type:

WLAN a/b/g: Integral (on board) PIFA Dual Band

Gain:

802.11a: +1 dBi peak, free space.

2. Method of Measurements

2.1. Conducted RF Measurements:

The RF output of the transmitter under test was directly connected to the input of the Spectrum analyzer through a specialized antenna connector provided by the manufacturer, and an attenuator as specified. The external attenuator and cable loss were added to the reading. Worst-case results of the various modulation modes (where applicable) were reported.

For carrier frequency separation, number of hopping frequencies, time of occupancy, 20dB BW, peak output power, band edge emissions, and spurious emissions were measured according the guidelines in DA 00-705.

For PSD, emission peak was zoomed within the pass band with spectrum analyzer's settings as reported (Sweep time=Span/3kHz). Transmitter outputs transmitting simultaneously were aggregated through a combiner.

For Maximum Conducted Output Power, the spectrum analyzer was set for free ran, and 100 traces were averaged in power averaging mode. The transmitter was continuously transmitting, at a duty cycle of about 99%, and power was integrated across a bandwidth of the 26dB EBW of the signal, using the spectrum analyzer's band power measurement function with band limits set equal to the EBW band edges. Alternatively, Peak Output Power was measured using a Peak Power Meter.

For spurious emissions measurement, the spectrum from 9 KHz to 40GHz was investigated with the transmitter set to the lowest, middle and highest channel frequencies.

For frequency stability, the 26dB Emission Bandwidth measurement was performed under extreme conditions with the DUT tuned to the band-edge channel. Worst case results were compared with the band-edge.

2.2. Radiated Emissions Measurements in the restricted bands:

For radiated emissions, which fall in the restricted bands the spectrum from 1MHz to 25GHz was investigated following the guidelines in ANSI C63.4-2003, with the transmitter set to the lowest, middle and highest channel frequencies. Measurements were performed with peak detector and repeated averaged with VBW=10Hz.

2.3. Radiated Emission measurements:

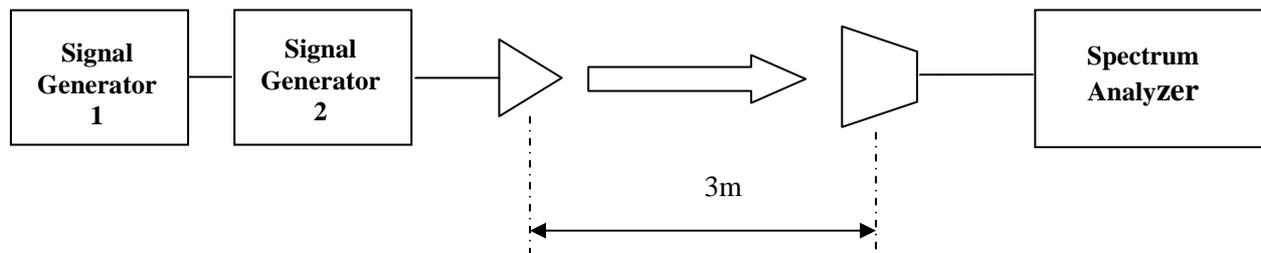

Measurements were performed at a 3-meter measurement distance in the semi-anechoic chamber in order to evaluate the radiated electromagnetic interference characteristics of the EUT. The EUT was placed on a non-metallic table/support, 0.8m above the turntable, was configured, arranged and operated in a manner consistent with typical application and load conditions. The test program of exercising the equipment ensured that various parts of the EUT were exercised to permit detection of all EUT disturbances.

An appropriate antenna depending upon the frequency range, per ANSI C63.4-2003 clause 4.1.5 was used. While the turntable was being rotated, the height of the antenna was varied from 1 to 4m for the frequency range of 30MHz to 1GHz. The highest radiated emission was detected by manipulating the system cables to the worst-case position. This process was repeated for both antenna polarizations. The spectrum up to 40GHz was investigated for spurious emissions, using a band-reject filter where appropriate.

The amplitudes of worst-case emission were measured with the detector modes and resolution bandwidths over various frequency ranges according to the requirements of ANSI C63.4-2003 clause 4.2.

2.4. DFS Response Requirements measurements, Client Device:

Radar Waveform Calibration: the following equipment setup was used to generate and calibrate the radiated radar waveform. The Spectrum Analyzer was set to span zero at a selected radar frequency, 3kHz RBW and VBW, and Peak detection.

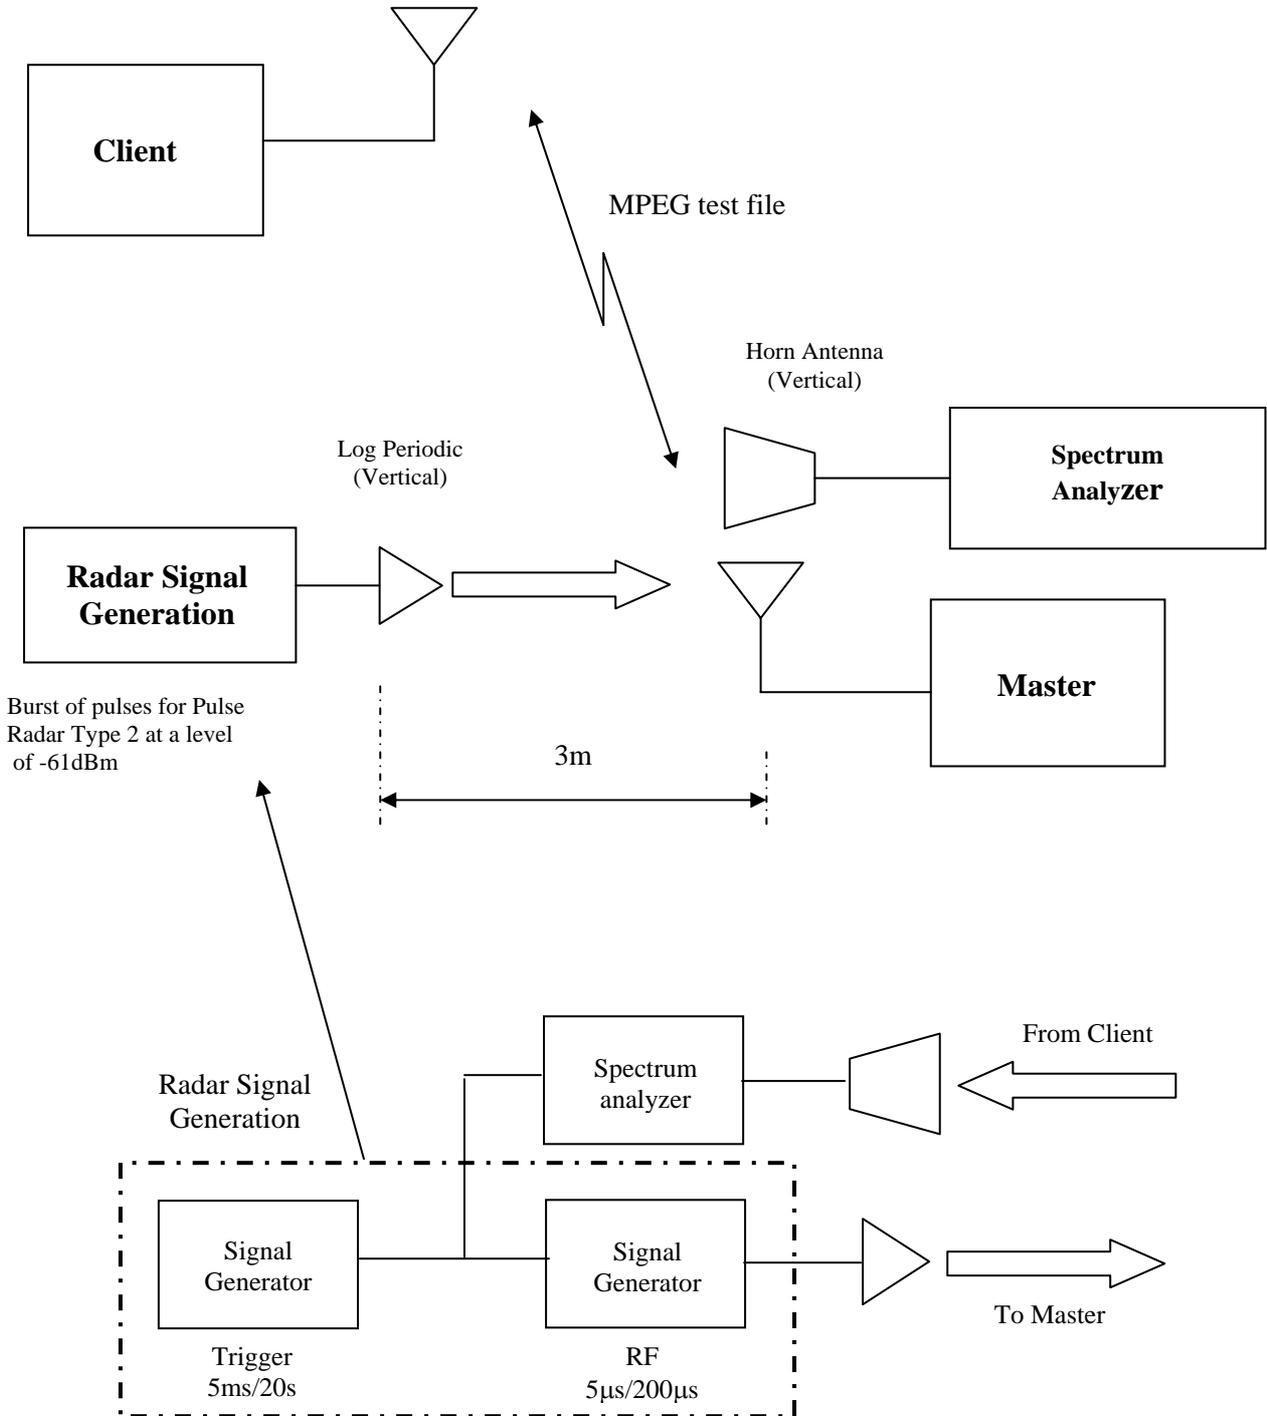

Test Procedure:

The IP master device was operated upon start-up and performed a Channel Availability Check and continued normal operation on the selected channel, transmitting MPEG Test File to the client. The selected channel frequency was also set as the RF frequency of the Radar Signal Generation devices. A burst of 25 pulses was generated for a minimum of 30 trials (Radar Type 2) pre-calibrated at appropriate levels above the threshold level to ensure “Radar detection” by the Master device. The Spectrum Analyzer was used as a monitor to verify that the Client EUT has vacated the channel within the Channel Move Time and to verify the Channel Closing Transmission Time do not exceed 200ms starting at the beginning of the Channel Move Time plus any additional intermittent control signals up to an aggregate of 60ms, during the remaining of the 10seconds period.

For “30 Minute Non-Occupancy”, Associated Test: The client was associated with the master and after master detection of radar pulse, the client moved with the master to the next chosen channel, and while streaming the MPEG test file, the vacated channel was monitored to verify that the DUT does not resume any transmission on this channel. The spectrum analyzer was running in max hold on the center of the vacated channel for more than 30 minutes. The 30 minute observation started immediately following the 10 second channel move time.

For “30 Minute Non-Occupancy”, Non - Associated Test: The client device was powered on and the master device was powered off, and a scan was taken across all channels. The spectrum analyzer was running in max hold and sweep time of 20ms. Sweeping was left for a period of more than 30 minutes to verify that the client is not employing active scanning and not transmitting on any channel without being associated with the master device.

Radiated Setup: EUT is a client and Radar test Waveform is injected into the Master.

3. Test Facility & Uncertainty of Measurement

3.1. Accreditation/ Registration reference:

- A2LA Certificate Number: 1633.01

3.2. Test Facility description

The tests were performed at the EMC Laboratory, QualiTech Division, ECI Telecom Group

Address: 30, Hasivim St., Petah Tikva, Israel.
Tel: 972-3-926-8443

3m Anechoic Chamber:

The 3m-screened chamber is used in two configurations: the semi-anechoic configuration for Radiated Emission measurements and the full-anechoic configuration for Radiated Immunity tests.

Semi Anechoic Configuration:

Measurement distance	3m
Chamber dimensions	9.5m x 6.5m x 5.2m
Antenna height	1 - 4m
Shielding Effectiveness	Magnetic field ≥ 80 dB at 15 kHz ≥ 90 dB at 100 kHz Electric field > 120 dB from 1MHz to 1GHz > 110 dB from 1GHz to 10GHz
Absorbing material	Ferrite tiles on the walls and ceiling Frankonia hybrid absorbing material in selected positions on the walls
Normalized Site Attenuation measured at 5 positions	± 3.49 dB, 30MHz to 1GHz
Transmission Loss measured at 5 positions, at 1.5m height	± 3 dB, 1GHz to 18GHz

Full-Anechoic Configuration:

Measurement distance	3m
Chamber dimensions	7m x 4m x 3m
Antenna height	1.55m at Horizontal & Vertical polarizations
Shielding Effectiveness	Magnetic field ≥ 80 dB at 15 kHz ≥ 90 dB at 100 kHz Electric field > 120 dB from 1MHz to 1GHz > 110 dB from 1GHz to 10GHz
Absorbing material	Ferrite tiles on the walls and ceiling Frankonia hybrid absorbing material in selected positions on the walls and floor
Field Uniformity to EN61000-4-3	± 3 dB 80MHz to 18GHz

3.3. Uncertainty of Measurement:

Test Name	Test Method & Range	Uncertainty	
		Combined std. Uc(y) [dB]	Expanded U [dB]
Radiated Emission	30MHz÷230MHz, Horiz. polar.	1.8	3.6
	30MHz÷230MHz, Ver. polar.	2.0	3.9
	230MHz÷1000MHz, Horiz. polar.	1.5	3.0
	230MHz÷1000MHz, Vert. polar.	1.5	3.0
Conducted Emission	9 kHz÷150 kHz	1.4	2.8
	150 kHz÷30MHz	1.1	2.2

4. WLAN 802.11a: Report of Measurements and Examinations

4.1. Emission Bandwidth (26dB BW)

Reference document:	47 CFR §15.403 (h) (i)		
Test Requirements:	For purposes of this subpart the emission bandwidth shall be determined by measuring the width of the signal between two points, one below the carrier center frequency and one above the carrier center frequency, that are 26 dB down relative to the maximum level of the modulated carrier. Determination of the emissions bandwidth is based on the use of measurement instrumentation employing a peak detector function with an instrument resolution bandwidth approximately equal to 1.0 percent of the emission bandwidth of the device under measurement.		
Test setup:	See sec 2.1	Pass	
Method of testing:	Conducted		
Operating conditions:	Under normal test conditions		
S.A. Settings:	RBW: 100kHz, VBW: 300kHz		
Environment conditions:	Ambient Temperature: 22°C	Relative Humidity: 48%	Atmospheric Pressure: 1011.4 hPa
Test Result:	See below	See Plot 4.1.1 - Plot 4.1.12

4.2. Maximum Conducted Output Power, 5180-5250 MHz, 5.25–5.35 GHz and 5.47–5.725 GHz

Reference document:	47 CFR §15.407 (a) (1), (2), (3)		
Test Requirements:	<p>(1) For the band 5.15-5.25 GHz, the maximum conducted output power over the frequency band of operation shall not exceed the lesser of 50 mW or 4 dBm + 10 log B, where B is the 26-dB,emission bandwidth in MHz. In addition, the peak power spectral density shall not exceed 4 dBm in any 1-MHz band. If transmitting antennas of directional gain greater than 6 dBi are used,</p> <p>(2) For the 5.25–5.35 GHz and 5.47–5.725 GHz bands, the maximum conducted output power over the frequency bands of operation shall not exceed the lesser of 250 mW or 11 dBm + 10 log B, where B is the 26 dB emission bandwidth in megahertz. In addition, the peak power spectral density shall not exceed 11 dBm in any 1 megahertz band. If transmitting antennas of directional gain greater than 6 dBi are used, both the maximum conducted output power and the peak power spectral density shall be reduced by the amount in dB that the directional gain of the antenna exceeds 6 dBi. (3) For the band 5.725–5.825 GHz, the maximum conducted output power over the frequency band of operation shall not exceed the lesser of 1 W or 17 dBm + 10 log B, where B is the 26-dB emission bandwidth in MHz. In addition, the peak power spectral density shall not exceed 17 dBm in any 1–MHz band both the maximum conducted output power and the peak power spectral density shall be reduced by the amount in dB that the directional gain of the antenna exceeds 6 dBi.</p>		
Test setup:	See sec 2.1	Pass	
Method of testing:	Conducted, Power meter		
Operating conditions:	Under normal test conditions		
S.A. Settings:	RBW: 1MHz, VBW: 3MHz		
Environment conditions:	Ambient Temperature: 22°C	Relative Humidity: 48%	Atmospheric Pressure: 1011.4 hPa
Test Result:	See below	-	

Test results:

5150-5250MHz Band:

Frequency [MHz]	26 dB Bandwidth (B) [MHz]	4 + 10Log B [dBm]	Measured Peak Power [dBm]	AVG Output power* [dBm]	Power Limit [dBm]	Margin [dB]

4.3. Peak Power Spectral Density

Reference document:	47 CFR §15.407 (a) (1), (2), (3), (5)		
Test Requirements:	For the band 5.15-5.25 GHz, the peak power spectral density shall not exceed 4 dBm in any 1MHz band. If transmitting antennas of directional gain greater than 6 dBi are used, both the maximum conducted output power and the peak power spectral density shall be reduced by the amount in dB that the directional gain of the antenna exceeds 6 dBi.		
Test setup:	See sec 2.1	Pass	
Method of testing:	Conducted		
Operating conditions:	Under normal test conditions		
S.A. Settings:	RBW: 1MHz , VBW: 3MHz , Sweep Time: Auto		
Environment conditions:	Ambient Temperature: 22°C	Relative Humidity: 48%	Atmospheric Pressure: 1011.4 hPa
Test Result:	See below	See Plot 4.3.1 - Plot 4.3.12

4.5. Conducted Spurious Emissions

Reference document:	47 CFR §15.407 (b) (1),(2),(3),(4) & §15.407 (b)(6)		
Test Requirements:	<p>The peak emissions outside of the frequency bands of operation shall be attenuated in accordance with the following limits: For transmitters operating in the 5.15-5.25 GHz band: all emissions outside of the 5.15-5.35 GHz band shall not exceed an EIRP of -27 dBm/MHz. For transmitters operating in the 5.25-5.35 GHz band: all emissions outside of the 5.15-5.35 GHz band shall not exceed an EIRP of -27 dBm/MHz. For transmitters operating in the 5.47-5.725 GHz band: all emissions outside of the 5.47-5.725 GHz band shall not exceed an EIRP of -27 dBm/MHz. For transmitters operating in the 5.725-5.825 GHz band: all emissions within the frequency range from the band edge to 10 MHz above or below the band edge shall not exceed an EIRP of -17 dBm/MHz; for frequencies 10 MHz or greater above or below the band edge, emissions shall not exceed an EIRP of -27 dBm/MHz. Unwanted emissions below 1 GHz must comply with the general field strength limits set forth in Sec. 15.209.</p>		
Test setup:	See sec 2.1	Pass	
Method of testing:	Conducted		
Operating conditions:	Under normal test conditions		
S.A. Settings:	RBW: 1 MHz, VBW:1 MHz		
Environment conditions:	Ambient Temperature: 22°C	Relative Humidity: 48%	Atmospheric Pressure: 1011.4 hPa
Test Result:	See below	See Plot 4.5.1- Plot 4.5.34	

Test results:

5150-5250 MHz: Spurious

Frequency [MHz]	Data Rate [Mbps]	Antenna Gain [dBi]	Measured Value [dBm/MHz]	Calculated EIRP [dBm/MHz]	EIRP Value Limit [dBm/MHz]	Reference Plots	Margin	Result

4.6. Spurious Radiated Emissions, Restricted Bands

Reference document:	47 CFR §15.407 (b) (7)		
Test Requirements:	The provisions of Sec. 15.205 apply to intentional radiators operating under this section.		
Test setup:	See sec 2.2, with High Pass Filter	Pass	
Method of testing:	Radiated		
Operating conditions:	Under normal test conditions		
S.A. Settings:	f >1GHz: Peak: RBW= 1MHz, VBW= 3MHz, Average: VBW= 10 Hz f <1GHz: RBW: 120kHz, VBW: 1MHz		
Environment conditions:	Ambient Temperature: 22°C	Relative Humidity: 48%	Atmospheric Pressure: 1011.4 hPa
Test Result:	See below	See Plot 4.6.1- Plot 4.6.58	

Test result:

Frequency [MHz]	Emission Level [dBμV/m]	Detector Type	Polarization V/H	Limit [dBμV/m]	Margin [dB]
41.26	28.32	QP	V	40	11.68
All other emission at least 15 dB below the limit					

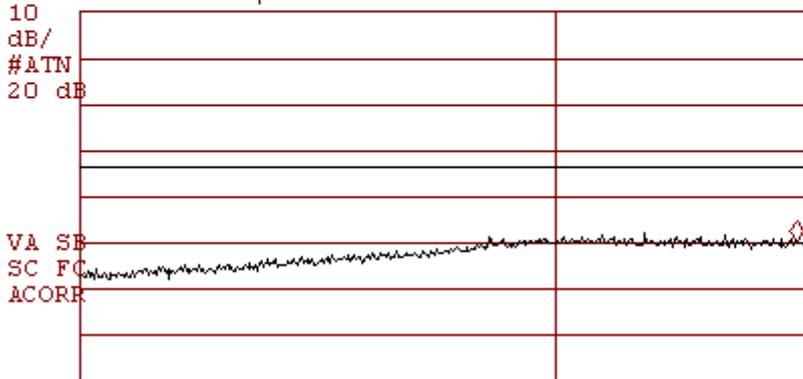

Note: Radiated Emission [dBμV/m] = measured [dBμV] + Correction-factor [dB(1/m)]
Correction Factor = Antenna factor + Cable Loss

4.7. Frequency Stability

Reference document:	47 CFR §15.407(g)		
Test Requirements:	Manufacturers of U-NII devices are responsible for ensuring frequency stability such that an emission is maintained within the band of operation under all conditions of normal operation as specified in the user's manual.		
Test setup:	See sec 2.1	Pass	
Method of testing:	Conducted		
Operating conditions:	Under normal test conditions		
S.A. Settings:	RBW: 100kHz, VBW: 300kHz		
Environment conditions:	Ambient Temperature: 22°C	Relative Humidity: 48%	Atmospheric Pressure: 1011.4 hPa
Test Result:	Data indicates that the fundamental emission is maintained within the band of operation under extreme conditions.	See Plot 4.7.1 to Plot 4.7.12	

Test results:

4.8. Antenna Connector Requirements

Reference document:	47 CFR §15.203	
Test Requirements:	An intentional radiator shall be designed to ensure that no antenna other than that furnished by the responsible party shall be used with the device. The use of a permanently attached antenna or of an antenna that uses a unique coupling to the intentional radiator shall be considered sufficient to comply with provisions of this section.	
Result:	The VoWLAN SR employs for WLAN a/b/g an Integral (on board) PIFA Dual Band.	Comply

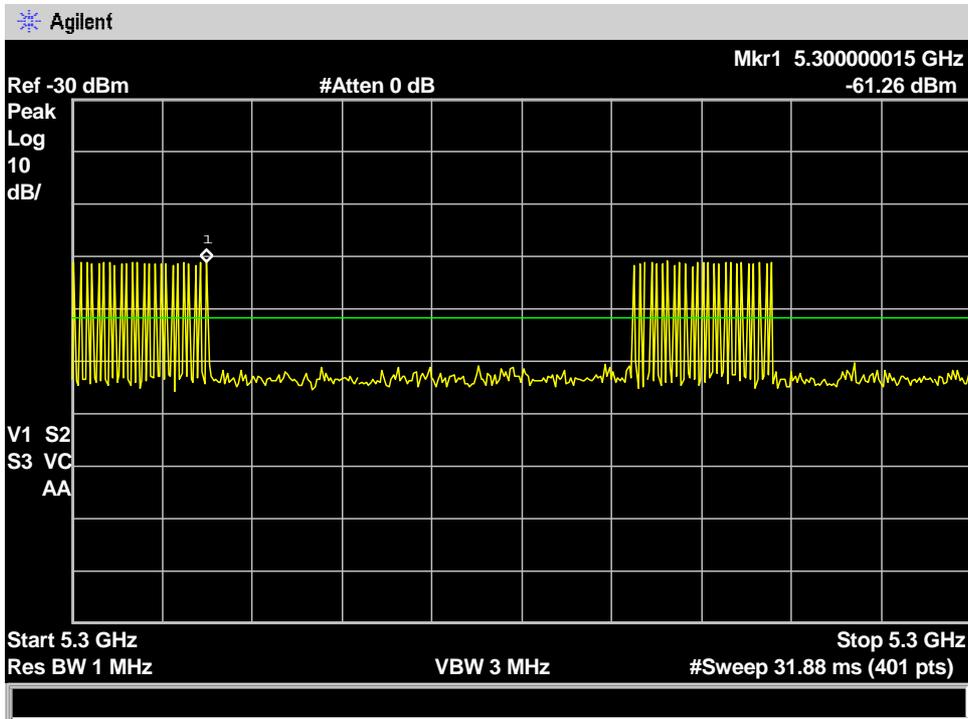

4.9. Dynamic Frequency Selection (DFS)

Reference document:	47 CFR §15.407(h)(2)(i)(B) & §15.407(h)(2)(iii) and FCC 06-96		
Test Requirements:	Radar Detection Function of Dynamic Frequency Selection (DFS). U-NII devices operating in the 5.25-5.35GHz and 5.47-5.725 GHz bands. Operational Modes. The DFS requirement applies to the following: (B) The requirement for channel move time applies in both the master and slave operational modes. DFS Response Requirements: (iii) Channel Move Time. After the radar's presence is detected, all transmissions shall cease on the operating channel within 10 seconds. Transmissions during this period shall consist of normal traffic for a maximum of 200 ms after detection of the radar signal. In addition, intermittent management and control signals can be sent during the remaining time to facilitate vacating the operating channel.		
Test setup:	See sec 2.4	Pass	
Method of testing:	Radiated		
Operating conditions:	Under normal test conditions		
S.A. Settings:	RBW: 3 MHz, VBW:3 MHz, Span 0		
Environment conditions:	Ambient Temperature: 22°C	Relative Humidity: 48%	Atmospheric Pressure: 1011.4 hPa
Test Result:	See below	See Plot 4.9.1 to Plot 4.9.4	

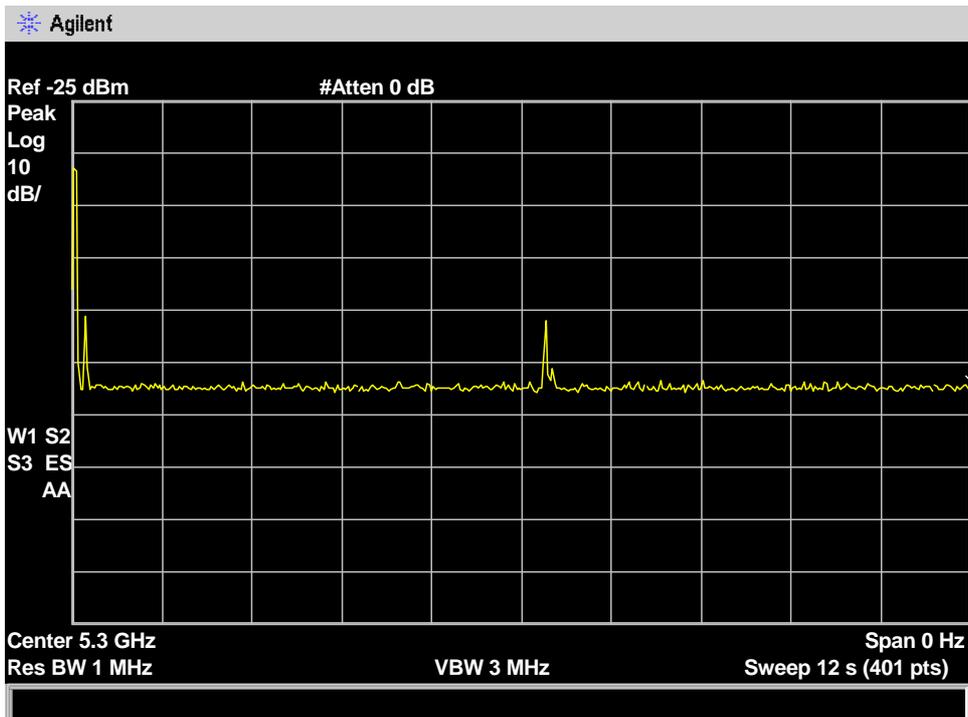

Test Results:

Channel Frequency [MHz]	Type of plot	Measured Channel Closing Transmission Time	Limit Channel Closing Transmission Time	Measured Move Time	Limit Move Time	Reference plots	Result
5280	Calibration of Radar Burst Level	-	-	-	-	4.9.1	Comply
5300	Transmission of the EUT on the operating channel at the end of the radar burst during the Channel Move Time	<40ms + aggregated <2ms	200ms + aggregated 60ms	< 6s	10s	4.9.2	
5260						4.9.3	
5320						4.9.4	
5280	30 Minute Non - Occupancy – Associated test	The client device did not transmit on this channel once the channel was cleared.				4.9.5	
5250 - 5725	30 Minute Non - Occupancy – Non - Associated test	The client device did not employ active scanning and did not transmit without being associated with the master device.				4.9.6

Channel Closing Transmission Time (Sweep 250ms)
Plot 4.9.4

30 Minutes Non-Occupancy, Associated test
Plot 4.9.5

30 Minutes Non-Occupancy, Non-Associated test
Plot 4.9.6

5. Appendix

Appendix A: List of Measuring Equipment used:

Equipment	Manufacturer/ Model	Serial Number	Due date
CISPR16 EMI Receiver	HP8546A	3710A00392	30-06-08
Spectrum Analyzer 9kHz ÷ 22 GHz	HP 8593EM	3536A00131	30-06-08
Spectrum Analyzer 100 Hz ÷ 26.5 GHz	Agilent E7405A	US41160436	30-06-08
LNA Amplifier 1 GHz ÷ 18 GHz	AMP – 5D-010180-30-10P-GW	618653	30-06-08
Power meter	Agilent N1911A	MY45100784	23-02-08
Dual Ridged Guide Ant.1-18 GHz	EMCO 3115	9602-4677	30-06-08
Antenna 18 GHz ÷ 26.5 GHz	Alpha Industry 861A/599	505	30-06-08
Turn table	HD100	100/693	-
Antenna Mast	HD 100	100/693	-
Biconical 20 –200 MHz	Schwarzbeck VHBB9124	9124/0255	16-05-08
Log-Periodic 200 – 1000 MHz	Schwarzbeck VUSLP9111	VUSLP9111184	16-05-08
Pre-Amplifier	MiTeq, AMF-5F-18002650-30-10P	945372	30-06-08
LISN	Fischer 50/250-25-2	-	30-06-08
Transient Limiter	HP11947A	-	30-06-08
Notch Filter	Micro-Tronics BRM50702-05	0001	30-06-08
Function Generator	HP-33250A	MY40000116	30-06-08
Signal Generator	HP 83732B	US37101834	30-06-08
Dual Ridged Guide Ant.1-18 GHz	EMCO 3115	6487	30-06-08
Access Point	Cisco AIR-AP1131AG-A-K9	FTX1129T22R	FCC ID: LDK102054E

Appendix B: Accreditation Certificate
