

Identification Label

LOCATION

- See the Attached Photograph or Sketch
- Top of Radio
- Back of Radio
- Back of Radio under Belt Clip

TYPE

- The label is a polyester film laminate with a pressure sensitive adhesive backing. The adhesive is a permanent type acrylic with the minimum peel strength of 32 oz/inch.

MARKINGS (TEXT)

- See the Attached Photograph and Exhibit 3-5 for the actual location of the FCC label on the device.
- Label Attached Below.
- See Attached Drawing.

General Information

- I. Production Plans -- Pursuant 2.1033 (c)
Quantity production is planned.
- II. Application References -- Pursuant 2.1061
Reference is made to the following Motorola "Application References"
1. Mobile Products and their application.
 2. Mobile Products Transmitter Modulations Methods.
 3. Plantation, Florida Antenna Range.
- III. Data Submittal Procedure:
Data is supplied in accordance with Part 2, Sub-part J of the Commissions' rules.

Necessary Bandwidth Computation for 8K10F1D, 8K10F1E and 8K10F1W Emission Designators

The FCC Rule & Regulations Part 2, §2.202(b) defines Necessary Bandwidth as the minimum value of the occupied bandwidth sufficient to ensure that transmission of information at the rate and with the quality required for the system employed. §2.202(c) lists four methods of determining the necessary bandwidth, including the use of formulas in §2.202(g), and measurement in cases where the other methods of §2.202(c) do not apply. It is felt that while these formulas apply well to voice and many older digital modulation systems, the formulas do not apply to the high performance digital modulation employed in the system submitted for Certification because of difficulties determining representative values for the factors K and M. We have, therefore, used the measurement criteria of §2.202(c)(4).

The value cited, 8K10, is the bandwidth that contains 99% of the total transmitted power. The 99% value was chosen because §2.202(b) defines Necessary Bandwidth as the minimum value of the occupied bandwidth. In turn, §2.202(b) defines Occupied Bandwidth as the frequency bandwidth such that, below its lower and above its upper frequency limits, the mean powers radiated are each equal to 0.5% of the total mean power radiated by a given emission, i.e., contains 99% of the total transmitted power.
