

**Exhibit 11. RF EXPOSURE INFORMATION**

The characteristics of having an antenna connector and no antenna are like those of transmitters classified as a mobile device, as defined in 47 CFR 2.1091(b), rather than a handheld portable device as defined in 47 CFR 2.1093(b). Thus, this module was environmentally evaluated for RF Exposure as a mobile device, and was found to be compliant with the MPE General Population limits for a mobile device in Table 1(B) of 47 CFR 2.1310 as required by 47CFR 2.1091(c).
