ENGINEERING STATEMENT

The measurements shown in this report were made in accordance with the procedures described on test pages. All reported testing was carried out on a sample equipment to demonstrate limited compliance with FCC 47 CFR Part 2 and FCC 47 CFR Part 90. The sample tested was found to comply with the requirements defined in the applied rules.

1.3 CONFIGURATION DESCRIPTION

The settings below were deemed representative for all traffic scenarios when settings with different modulations, channel bandwidths, number of carriers and RF configurations has been tested to find the worst case setting. The settings below were used for all measurements if not otherwise noted:

LTE:

MIMO mode single carrier: E-TM1.1, E-TM3.2, E-TM3.1

MIMO mode multi carrier (x2): E-TM1.1

The complete testing was performed with the EUT transmitting at maximum RF power unless otherwise stated.

The EUT consists of 2 antenna ports. All measurements were performed on both Antenna ports, (A & B).

Pre-test results were used to establish the worst case configuration of the EUT for Frequency Stability. It was established that QPSK – 10 MHz was the worst case for Frequency Stability measurements. As the EUT can be powered by a DC supply, measurements were also conducted at voltage extremes at 20 °C.

The LXN 500 supports LTE Band 14 – 758 – 768 MHz, (downlink) and 788 – 798 MHz, (uplink), frequency bands.

Test Models as defined in 3GPP TS 25.141 and TS 36.141 were used to represent the required modulation for test.

The EUT was powered by an external 120 V AC 60 Hz Supply which provided power to the EUT.

1.5 PRODUCT INFORMATION

1.5.1 Technical Description

The Equipment Under Test (EUT) –is a Motorola LTE Ultra-Portable Infrastructure working in the public mobile service Band 14 which provides communication connections to Band 14 network. The EUT can operate from a 120 V 60 Hz AC, 12 or 24 V DC supply.

The Equipment Under Test (EUT) is shown in the photograph below. A full technical description can be found in the Manufacturer's documentation.

1.7 TEST CONDITIONS

For all tests the EUT was set up in accordance with the relevant test standard and to represent typical operating conditions. Tests were applied with the EUT situated in a shielded enclosure, test laboratories or a chamber as appropriate.

The EUT was powered from a 120 V 60 Hz AC supply.

1.8 DEVIATION FROM THE STANDARD

No deviations from the applicable test standards or test plan were made during testing.

1.9 MODIFICATION RECORD

All tests were performed in Modification State 0 – as supplied except for tests at -20 °C.

Modification State 1 – modifications to PA matching circuit to improve device linearity

The major items of test equipment used for the above tests are identified in Section 3.1.

2.1.4 Environmental Conditions

Ambient Temperature	22.5°C
Relative Humidity	55.2%

2.1.5 Test Method

All measurements were made in accordance with FCC KDB 971168 D01 Clause 5.2.1 and 5.7.1 and summed in accordance with FCC KDB 662911 D01.

Measurements were performed with a Spectrum Analyser using the Band Power measurement function. The detector was set to RMS with an RBW of 300 kHz and VBW of 1 MHz. The detection bandwidth was configured to be wider than the total bandwidth of the carrier or combinations of carriers, (multi-carrier). Using a sweep time of 5 seconds, the average measurement was recorded.
