TITLE: APX8500 2.4 GHz Covert Glass-Mount BT/WIFI ANTENNA

1. SCOPE

This document contains specifications pertinent to the AXP8500 2.4 GHz Covert Glass-Mount BT/WIFI antenna for use in mobile radios. It includes General, Mechanical and Electrical Requirements, VQA/Final tests, and Qualification tests.

2. APPLICABLE DOCUMENTS

- 12M02897W18 Controlled and Reportable Materials Disclosure
- 12M05022A87 Motorola Quality Procedure Outsourced Assembled Kits
- 12M05041A30 Motorola Barcode and Label Applications Standard
- 12M80967A78 Motorola Vendor Material Quality Control
- 12S10601A Motorola Packaging Rules for Vendors
- 12S10616A Motorola Marking and Containers for Consumer Products Division
- 12G13933A01 Motorola Receiving Bar Code Specification for Vendors

3. REQUIREMENTS

3.1 General

Manufacturer needs to report any change in process/ material that would affect the electrical/ mechanical performance of the antenna.

2.4 GHz Covert Glass-Mount BT/WIFI ANTENNA DEFINED IN THIS DOCUMENT	
Part Number	Description
PMAN5100A	2.4 GHz Covert Glass-Mount BT/WIFI Antenna with 17ft Cable and QMA Connector

3.1.1 Application: This antenna is used with vehicle mount mobile radios.

The information contained in this document is proprietary to Motorola Solutions and shall not be reproduced or used in whole or in part without Motorola Solutions written consent.

Material or Methods Specification

Number: PMAN5100A
Issue: A
Page 4 of 14

TITLE: APX8500 2.4 GHz Covert Glass-Mount BT/WIFI ANTENNA

3.1.2 Mechanical Requirements: Table 1. See Antenna diagram on page 6.

Part Number	Description	WIFI Antenna Cable	Install Manual
PMAN5100A	2.4GHz BT/WIFI Glass Mount for vehicle installations	PVC Free RG316 FEP 1ft and PFP-195 16ft with QMA Plug (QMA Plug: Amphenol LMR-195 or Motorola Approved Equivalent)	Install Manual for Wi-Fi Glass Mount PMLN7726A

Table 1: Mechanical Requirements

3.1.2 Mechanical:

Random Vibration Test: Per MIL-STD-810E, Method 514.4, Procedure I-3.3

Temperature Cycle Test: In temperature/humidity chamber and perform 5 contiguous cycles of the following temperature cycle:

- a. Begin test at room temperature (+23°C).
- b. Ramp up to 70°C in 94 + 15/-0 minutes (0.5°C/min).
- c. Soak at 70°C for 60 +30/-0 minutes.
- d. Ramp down to -40°C in 220 + 15 minutes/-0 (0.5°C/min).
- e. Soak at -40°C for 60 +30/-0 minutes.
- f. Ramp back to room temperature in 126 + 15 minutes/-0 (0.5°C/min).

Humidity Cycle Test: In temperature/humidity chamber and perform the following 24-hour temperature/humidity profile:

- a. Begin test at 25°C/50% relative humidity.
- b. Ramp temperature to 40°C + 5°C and relative humidity to 95% + 5% in 3 hours + 30 minutes/-0.
- c. Hold at 40°C + 5°C and 95% + 5% relative humidity for 6 hours + 30 minutes/-0.
- d. Ramp temperature to 25°C + 5°C and relative humidity to 80% + 5% in 3 hours + 30 minutes/-0.

The information contained in this document is proprietary to Motorola Solutions and shall not be reproduced or used in whole or in part without Motorola Solutions written consent.

Material or Methods Specification

Issue: A
Page 5 of 14

TITLE: APX8500 2.4 GHz Covert Glass-Mount BT/WIFI ANTENNA

- e. Ramp relative humidity to 95% + 5% while maintaining temperature at 25°C + 5°C in 3 hours + 30 minutes/-0.
- f. Soak at 25°C + 5°C and 95% + 5% relative humidity for 6 hours.
- g. Ramp temperature to 40°C + 5°C while maintaining relative humidity at 95% + 5% in 3 hours + 30 minutes/-0.
- h. Repeat steps c through g for a total of 6 cycles.

Salt Spray (Fog) Test: Per MIL-STD-810E, Procedure I, Method 509.3

3.1.3 Electrical Requirements:

Table 2: BT/WLAN Specifications

Motorola P/N	Freq Range (GHz)	Nominal Impedance (Ohms)	Max. Power (Watts)	Peak Gain (dBi)	Nominal VSWR (over 90 %BW)	MAX. VSWR
PMAN5100A	2.30- 2.50	50	1	2.0 – 3.0 ¹	< 1.6:1 ¹	< 2.0:1 ¹

¹ Note: Measured in an anechoic setup/ open space with no interference. The antenna cable was cut to 1-foot length and terminated with SMA Male connector. A 16-foot PFP-240 cable assembly was attached to the antenna pigtail and terminated with Male QMA. The antenna was mounted on a 12 W x 5 H x .25- inch glass pane bordered with a metal rim (right side border of the pane).
Additional Note: PFP-195 is used on the shipping product, instead of PFP-240 used during testing. The difference in these cables is 0.7 dB, and this is already included in the numbers above.

The information contained in this document is proprietary to Motorola Solutions and shall not be reproduced or used in whole or in part without Motorola Solutions written consent.

6. TYPICAL VSWR FOR REFERENCE

(Mounted as shown in Fig 1B, with 17ft Cable)

Note: Measured in an anechoic setup/ open space with no interference. The antenna cable was cut to 1-foot length and terminated with SMA Male connector. A 16-foot PFP-240 cable assembly was attached to the antenna pigtail and terminated with Male QMA. The antenna was mounted on a 12 W x 5 H x .25- inch glass pane bordered with a metal rim (right side border of the pane).

Additional Note: PFP-195 is used on the shipping product, instead of PFP-240 used during testing. The difference in these cables is 0.7 dB, but it NOT included in the results above.

The information contained in this document is proprietary to Motorola Solutions and shall not be reproduced or used in whole or in part without Motorola Solutions written consent.

7. TYPICAL PEAK GAIN FOR REFERENCE

(Mounted as shown in Fig 1B, with 17ft Cable Loss)

Note: Measured in an anechoic setup/ open space with no interference. The antenna cable was cut to 1-foot length and terminated with SMA Male connector. A 16-foot PFP-240 cable assembly was attached to the antenna pigtail and terminated with Male QMA. The antenna was mounted on a 12 W x 5 H x .25- inch glass pane bordered with a metal rim (right side border of the pane).

Additional Note: PFP-195 is used on the shipping product, instead of PFP-240 used during testing. The difference in these cables is 0.7 dB, but it NOT included in the results above.

8. TYPICAL EFFICIENCY FOR REFERENCE

(Mounted as shown in Fig 1B, with 17ft Cable Loss)

Note: Measured in an anechoic setup/ open space with no interference. The antenna cable was cut to 1-foot length and terminated with SMA Male connector. A 16-foot PFP-240 cable assembly was attached to the antenna pigtail and terminated with Male QMA. The antenna was mounted on a 12 W x 5 H x .25- inch glass pane bordered with a metal rim (right side border of the pane).

Additional Note: PFP-195 is used on the shipping product, instead of PFP-240 used during testing. The difference in these cables is 0.7 dB, but it NOT included in the results above.

The information contained in this document is proprietary to Motorola Solutions and shall not be reproduced or used in whole or in part without Motorola Solutions written consent.

9. TYPICAL RADIATION PATTERNS

(Mounted as shown in Fig 1B, with 17ft Cable)
Phi=0

Note: Measured in an anechoic setup/ open space with no interference. The antenna cable was cut to 1-foot length and terminated with SMA Male connector. A 16-foot PFP-240 cable assembly was attached to the antenna pigtail and terminated with Male QMA. The antenna was mounted on a 12 W x 5 H x .25- inch glass pane bordered with a metal rim (right side border of the pane).

Additional Note: PFP-195 is used on the shipping product, instead of PFP-240 used during testing. The difference in these cables is 0.7 dB, but it NOT included in the results above.

10. OTHER ANTENNA PARAMETERS

(Mounted as shown in Fig 1B, with 17ft Cable)

Band	Frequency (GHz)	3 dB Vertical Beamwidth (degrees)	Peak Gain Angle from Horizon (degrees)
2.4 GHz	2.45	48' (With Cable)	21' (With Cable)

Note: Measured in an anechoic setup/ open space with no interference. The antenna cable was cut to 1-foot length and terminated with SMA Male connector. A 16-foot PFP-240 cable assembly was attached to the antenna pigtail and terminated with Male QMA. The antenna was mounted on a 12 W x 5 H x .25- inch glass pane bordered with a metal rim (right side border of the pane).
