### Class II Permissive Change measurements on GSM Base station Transceiver Unit with FCC ID: B5KEKRC1311004-2

(8 appendices)

Revision 1 uses updated client information in appendix 1 regarding the declared nominal output power.

#### Test object

Transceiver Unit dTRU-19, product KRC 131 1004/2, revision R4A

#### Summary

| Standard                                    | Compliant | Appendix | Remarks |

## Appendix 1

### Description of the test object

Equipment: GSM Base station transceiver unit (dTRU) 1900 MHz

TX frequency band: 1930 - 1990 MHz

Modulations: GMSK, 8PSK, 16QAM, 32QAM, AQPSK

| Declared maximum output power, RMS value in [dBm] | Modulations |      |       |       |       |
|---------------------------------------------------|-------------|------|-------|-------|-------|
|                                                   | GMSK        | 8PSK | 16QAM | 32QAM | AQPSK |
| Hybrid combined (HC) mode                         | 41.7        | 38.4 | 37.0  | 36.6  | 38.3  |
| Uncombined (UC) mode                              | 45.0        | 41.0 | 40.3  | 39.9  | 41.6  |
| TCC mode                                          | 46.0        | 44.0 | 41.3  | 40.9  | 42.6  |

Supply voltage 24 V DC

### Purpose of test

The purpose of this test is to justify a Class II Permissive Change of the test object to include the use of AQPSK modulation with SCPIR 0 dB. This report verifies maintained performance characteristics of affected items according FCC CFR47 by re-testing the updated equipment and comparing results for GMSK reference modulation with AQPSK modulation in SCPIR 0 dB. For band-edge performance the acceptable settings for the new implemented AQPSK modulation were determined.

### Summary of results

Measurement results are similar for all tested modulations, apart from RF output power, where GMSK modulation results in the highest RMS output power, and for band-edge performance, where specific restrictions apply as described in appendix 4. Where several modulations were compared, GMSK modulation shall be considered a worst case set-up.

### Tested configurations

All measurements were performed with the test object installed in a RBS 2206 V2 cabinet. The hardware list for radiated and conducted measurements is shown in appendix 7. Unless noted otherwise the test object was activated at maximum power, configured for TCC mode with RBS master 2E setting 49, resulting in the highest achievable output power. In all used configurations random data was transmitted by the activated TX in all time slots with the various tested modulations being activated one at a time.

## Appendix 1

**Conducted measurements**

Conducted measurements were done at the output connector TX/RX 1 of CDU-G19.

**Radiated measurements**

During radiated emission measurements the TX/RX 1 output of CDU-G19 was via a 50 ohm attenuator connected to a spectrum analyser to monitor the transmitted signal level. For the scope of this test it was deemed sufficient to measure radiated spurious emission at the TX band centre frequency for GMSK modulation as worst case reference modulation with the highest RMS power and compare it with results for the AQPSK modulation with SCPIR 0 dB.

**Frequencies used**

| Channel | ARFCN | Frequency  | Comment                                            |
|---------|-------|------------|----------------------------------------------------|
| B       | 512   | 1930.2 MHz | TX frequency adjacent lower frequency band edge    |
| B+1     | 513   | 1930.4 MHz | TX low alternate frequency, 1 channel inside band  |
| M       | 661   | 1960.0 MHz | TX band centre frequency                           |
| T-1     | 809   | 1989.6 MHz | TX high alternate frequency, 1 channel inside band |
| T       | 810   | 1989.8 MHz | TX frequency adjacent higher frequency band edge   |

**Manufacturer's representative**

Hua Yang, Ericsson (China) Communications Company Ltd

**References**

Measurements were done according to relevant parts of the following standards:

ANSI C63.4-2009

ANSI/TIA/EIA-603-C-2004

ANSI/TIA/EIA 136-280-D-2002

CFR 47 part 2, October 1<sup>st</sup>, 2010

## Appendix 2

### RF Power output measurements according to CFR 47 2.1046

|            |              |            |
|------------|--------------|------------|
| Date       | Temperature  | Humidity   |
| 2011-12-05 | 23 °C ± 3 °C | 23 % ± 5 % |

### Test set-up and procedure

Measurements were made at the CDU-G19 output connector. The output was connected to a Peak power analyser via a 50 ohm attenuator.

| Measurement equipment                      | SP number |
|--------------------------------------------|-----------|
| Boonton 4500A RF Peak power meter/analyser | 503 144   |
| Boonton Power sensor 56518-S/4             | 503 146   |
| Attenuator                                 | 504 159   |
| Multimeter Fluke 87                        | 502 190   |
| Testo 635 temperature and humidity meter   | 504 203   |

**Measurement uncertainty:** 0.7 dB

### Results

Configuration TCC mode, RBS master 2E setting 49.

| Transmitter power (dBm) |            |      |      |
|-------------------------|------------|------|------|
| Channel                 | Modulation | Peak | RMS  |
| M                       | GMSK       | 47.1 | 46.2 |
| M                       | AQPSK      | 46.8 | 42.7 |

The maximum PAR measured above was 4.1 dB.

### Limits

According to CFR § 24 there are no conducted limits at the antenna connector.

§ 24.232: The peak-to-average (PAR) ratio shall not exceed 13 dB. Base stations with an emission bandwidth of 1 MHz or less are limited to 1640 watts equivalent isotropically radiated power (EIRP).

|           |     |

### Band edge measurements according to 47CFR 2.1051

|            |              |            |
|------------|--------------|------------|
| Date       | Temperature  | Humidity   |
| 2011-12-05 | 23 °C ± 3 °C | 23 % ± 5 % |

#### Test set-up and procedure

The measurements were made per definition in §24.238, with the CDU output connected to a spectrum analyser with the RMS detector activated. The spectrum analyser was connected to an external 10 MHz reference standard during the measurements.

FCC rules allow a resolution bandwidth of one per cent of the emission bandwidth of the fundamental emission within the first 1 MHz off the band edge. FCC rules require a resolution bandwidth of 1 MHz for measurements of emissions with band edge offsets exceeding 1 MHz.

Measurement bandwidths of 3 kHz, 50 kHz and 1MHz were used and the respective limit was adapted by  $[10 * \log(\text{RBW}_{\text{used}}/\text{RBW}_{\text{required}})]$  dB.

| Measurement equipment                    | SP number |
|------------------------------------------|-----------|
| R&S FSIQ                                 | 503 738   |
| Attenuator                               | 504 159   |
| Multimeter Fluke 87                      | 502 190   |
| Testo 635 temperature and humidity meter | 504 203   |

**Measurement uncertainty:** 3.7 dB

#### Results

| Diagram   | Channel | Combiner configuration | RBS master 2E setting | Measured RMS power / [dBm] |
|-----------|---------|------------------------|-----------------------|----------------------------|
| 1 a, b, c | B       | UC mode                | 45                    | 40.3                       |
| 2 a, b, c | T       | UC mode                | 45                    | 40.3                       |
| 3 a, b, c | B+1     | TCC mode               | 49                    | 42.6                       |
| 4 a, b, c | T-1     | TCC mode               | 49                    | 42.5                       |

The diagrams are shown on the following pages.

#### Remark

For channels B and T above documented RMS output powers were found to represent the maximum acceptable values with AQPSK modulation using SCPIR 0 dB to meet band-edge requirements.

#### Limits

The power of any emission outside the frequency band shall be attenuated below the transmitter power (P) by at least  $43 + 10 \log P$  dB.

### Conducted spurious emission measurements according to 47CFR 2.1051

|            |              |            |
|------------|--------------|------------|
| Date       | Temperature  | Humidity   |
| 2011-12-05 | 23 °C ± 3 °C | 23 % ± 5 % |

#### Test set-up and procedure

The measurements were made per definition in §24.238, with the CDU output connected to a spectrum analyser. A pre-measurement was performed with the PEAK detector activated. Emission close to or above the limit with the PEAK detector is measured with the RMS detector activated. The spectrum analyser was connected to an external 10 MHz reference standard during the measurements.

#### Test set-up and procedure

The measurements were performed with both horizontal and vertical polarization of the antenna. The antenna distance was 3 m in the frequency range 30 MHz – 18 GHz and 1m in the frequency range 18-20 GHz.

The measurements were performed in Effective Radiated Power (ERP). A fully anechoic chamber was used during the measurements. The chamber is regularly calibrated with the substitution method and from that calibration an ERP correction factor is derived. The correction factor was used as a transducer to get the readings in ERP.

The measurement procedure was as the following:

1. A pre-measurement was first performed with peak detector. The EUT was continuously measured in 360 degrees.
2. Spurious radiation on frequencies closer than 6 dB to the limit was re-measured with RMS detector and with the substitution method according to the standard.

The test object was configured in TCC mode. TX ARFCN 661 (1960.0 MHz) was used.

| Measurement equipment                    | SP number |
|------------------------------------------|-----------|
| Anechoic chamber, Hertz                  | 15:116    |
| Rohde & Schwarz EMI Test Receiver ESI40  | 503 125   |
| Chase bilog antenna CBL 6121A            | 502 460   |
| Schaffner Reference Dipole BSRD6500      | 503 649   |
| EMCO Horn Antenna 3115                   | 502 175   |
| EMCO Horn Antenna 3115                   | 501 548   |
| Flann Std gain horn 20240-20             | 503 674   |
| MITEQ Low Noise Amplifier                | 503 277   |
| Attenuator                               | 504 159   |
| High pass filter                         | 503 739   |

| Testo 615 temperature and humidity meter | 503 498   |

## Appendix 6

The test set-up is shown in the picture below:

## Appendix 6

### Results

#### Modulation GMSK

| Frequency<br>(MHz) | Spurious emission level (dBm)    |                                  |
|--------------------|----------------------------------|----------------------------------|
|                    | Vertical                         | Horizontal                       |
| 30-20 000          | All emission > 20 dB below limit | All emission > 20 dB below limit |

#### Modulation AQPSK

| Frequency<br>(MHz) | Spurious emission level (dBm)    |                                  |
|--------------------|----------------------------------|----------------------------------|
|                    | Vertical                         | Horizontal                       |
| 30-20 000          | All emission > 20 dB below limit | All emission > 20 dB below limit |

**Measurement uncertainty:** 3.1 dB

### Limits

The power of any emission outside the frequency band shall be attenuated below the transmitter power (P) by at least  $43 + 10 \log P$  dB.

|           |     |
|-----------|-----|
| Complies? | Yes |
|-----------|-----|
