Appendix 1

Description - Equipment Under Test (EUT)

Equipment: GSM Base station transceiver unit (dTRU) 850 MHz

TX frequency band: 869 – 894 MHz

Modulations: GMSK, 8PSK, 16QAM, 32QAM, AQPSK

Declared maximum output power, RMS value in [dBm]	Modulations				
	GMSK	8PSK	16QAM	32QAM	AQPSK
Hybrid combined (HC) mode	43.0	39.7	38.3	37.9	39.6
Uncombined (UC) mode	46.3	43.0	41.6	41.2	42.9
TCC mode	49.0	45.7	44.3	43.9	45.6

Supply voltage 24 V DC

Purpose of test

The purpose of this test is to justify a Class II Permissive Change of the test object to include the use of AQPSK modulation with SCPIR 0 dB. This report verifies maintained performance characteristics of affected items according FCC CFR47 by re-testing the updated equipment and comparing results for AQPSK modulation in SCPIR 0 dB with GMSK reference modulation. For band-edge performance the acceptable settings for the new implemented AQPSK modulation were determined.

Summary of results

Measurement results are similar for all tested modulations, apart from output power, where GMSK modulation results in the highest RMS output power, and band-edge performance, where specific restrictions apply as described in appendix 4. Where several modulations were compared, GMSK modulation shall be considered a worst case set-up.

Tested configuration

All measurements were performed with the test object installed in a RBS 2206 V2 cabinet. The hardware list for radiated and conducted measurements is shown in appendix 7. Unless noted otherwise the test object was activated at maximum power, configured for TCC mode with RBS master 2E setting 51, resulting in the highest achievable output power. For band-edge performance verification UC and TCC configurations were used as described in appendix 4. In all configurations used random data was transmitted by the activated TX in all time slots with the various tested modulations being activated one at a time.

Appendix 1

Conducted measurements

Conducted measurements were done at the output TX/RX 1 of the CDU-G8.

Radiated measurements

During radiated emission measurements the TX/RX 1 output of CDU-G8 was via a 50 ohm attenuator connected to a spectrum analyser to monitor the transmitted signal level. For the scope of this test it was deemed sufficient to measure radiated spurious emission at the TX band centre frequency for GMSK modulation as worst case reference modulation with the highest RMS power and compare it with results for the AQPSK modulation with SCPIR 0 dB.

Test frequencies used

Channel	ARFCN	Frequency	Comment
B	128	869.2 MHz	TX frequency adjacent to lower frequency band edge
B+1	129	869.4 MHz	TX low alternate frequency, 1 channel inside band
M	190	881.6 MHz	TX band centre frequency
T-1	250	893.6 MHz	TX high alternate frequency, 1 channel inside band
T	251	893.8 MHz	TX frequency adjacent to higher frequency band edge

Manufacturer's representative

Hua Yang, Ericsson (China) Communications Company Ltd

References

Appendix 2

RF Power output measurements according to CFR 47 2.1046

Date	Temperature	Humidity
2011-12-06	23 °C ± 41 °C	27 % ± 5 %

Test set-up and procedure

Measurements were made with the CDU output connected to a Peak power analyser via a 50 ohm attenuator.

Measurement equipment	SP number
Boonton RF Peak power meter/analyser	503 144
Boonton Power sensor 56518-S/4	503 146
Attenuator	504 159
Multimeter Fluke 87	502 190
Testo 635 temperature and humidity meter	504 203

Measurement uncertainty: 0.7 dB

Results

Configuration: TCC mode, RBS master 2E setting 51

Transmitter power (dBm)			
Channel	Modulation	Peak	RMS
M	GMSK	49.2	48.5
M	AQPSK	48.9	44.9

The maximum measured PAR was 4.0 dB.

Limits

CFR 47 § 22.913: 500 W ERP shall not be exceeded.

Complies?	Yes
-----------	-----

Appendix 3

Occupied bandwidth measurements according to 47CFR 2.1049

Date	Temperature	Humidity
2011-12-06	23 °C ± 41 °C	27 % ± 5 %

Measurements were made at CDU-G8 output connector. The output was connected to a spectrum analyser with the RMS detector activated. The spectrum analyser was connected to an external 10 MHz reference standard during the measurements.

Measurement equipment	SP number
R&S FSIQ	503 738
Attenuator	504 159
Multimeter Fluke 87	502 190
Testo 635 temperature and humidity meter	504 203

Measurement uncertainty: 3.7 dB, 1.33 kHz

Results

Configuration: TCC mode, RBS master 2E setting 51

The measurement was performed at ARFCN 190 (881.6 MHz).

	Modulation	OBW
Diagram 1:	GMSK	241 kHz
Diagram 2:	AQPSK	237 kHz

The diagrams are shown on the following page.

Appendix 3

Diagram 1:

Diagram 2:

Date: 6.DEC.2011 14:18:06

Appendix 4

Band edge measurements according to 47CFR 2.1051

Date	Temperature	Humidity
2011-12-06	23 °C ± 41 °C	27 % ± 5 %

The measurements were made per definition in §22.917, with the CDU output connected to a spectrum analyser with the RMS detector activated. The spectrum analyser was connected to an external 10 MHz reference standard during the measurements.

FCC rules allow a resolution bandwidth of one per cent of the emission bandwidth of the fundamental emission within the first 1 MHz off the band edge. FCC rules require a resolution bandwidth of 100 kHz for measurements of emissions for offsets from the band edges exceeding 1 MHz.

Measurement equipment	SP number
R&S FSIQ	503 738
Attenuator	504 159
Multimeter Fluke 87	502 190
Testo 635 temperature and humidity meter	504 203

Measurement uncertainty: 3.7 dB

Results

Diagram	Channel	Combiner configuration	RBS master 2E setting	Measured RMS power / [dBm]
1 a, b, c	B	UC mode	43	41.5
2 a, b, c	T	UC mode	47	42.1
3 a, b, c	B+1	TCC mode	51	44.8
4 a, b, c	T-1	TCC mode	51	44.7

The diagrams are shown on the following pages.

Remark

For channels B and T the above documented RMS powers were found to represent the maximum acceptable RF output power with AQPSK modulation using SCPIR 0 dB to meet band-edge requirements.

Limits

The power of any emission outside the frequency band shall be attenuated below the transmitter power (P) by at least 43 + 10 log P dB.

Complies?	Yes

Appendix 5

Conducted spurious emission measurements according to 47CFR 2.1051

Date	Temperature	Humidity
2011-12-06	23 °C ± 41 °C	27 % ± 5 %

Test set-up and procedure

The measurements were made at the CDU-G8 output connector. The output was connected to a spectrum analyser. A pre-measurement was performed with the PEAK detector activated. Emission above the limit with the PEAK detector is measured with the RMS detector activated. The spectrum analyser was connected to an external 10 MHz reference standard during the measurements.

Measurement equipment	SP number
R&S FSIQ	503 738
Attenuator	504 159
High pass filter	502 758
Testo 635 temperature and humidity meter	504 203

Measurement uncertainty: 3.7 dB

Results

Configuration: TCC mode, RBS master 2E setting 51, TX ARFCN 190 (881.6 MHz)

Diagram 1 a: GMSK, 9 KHz – 1 GHz

Diagram 1 b: GMSK, 1 GHz – 10 GHz

Diagram 2 a: AQPSK, 9 KHz – 1 GHz

Diagram 2 b: AQPSK, 1 GHz – 10 GHz

The diagrams are shown on the following pages.

Remark

The emission at 9 kHz on some plots was not generated by the test object. A complementary measurement with a smaller RBW showed that it was related to the LO feed-through.

Limits

The power of any emission outside the frequency band shall be attenuated below the transmitter power (P) by at least 43 + 10 log P dB.

Complies?	Yes

Appendix 6

Field strength of spurious radiation measurements according to 47CFR 2.1053

Date	Temperature	Humidity
2011-06-20	22 °C ± 3 °C	48 % ± 5 %

Test set-up and procedure

The measurements were performed with both horizontal and vertical polarisation of the antenna. The antenna distance was 3 m in the frequency range 30 MHz – 10 GHz. The measurements were performed in Effective Radiated Power (ERP). A fully anechoic chamber was used during the measurements. The chamber is regularly calibrated with the substitution method and from that calibration an ERP correction factor is derived. The correction factor was used as a transducer to get the readings in ERP.

The measurement procedure was as the following:

1. A pre-measurement was first performed with peak detector. The EUT was continuously measured in 360 degrees.
2. Spurious radiation on frequencies closer than 6 dB to the limit was re-measured with RMS detector and with the substitution method according to the standard.
