ENGINEERING STATEMENT

The measurements shown in this report were made in accordance with the procedures described on test pages. All reported testing was carried out on a sample equipment to demonstrate limited compliance with FCC 47 CFR Part 15B. The sample tested was found to comply with the requirements defined in the applied rules.

1.5 Product Information

1.5.1 Technical Description

The Equipment Under Test (EUT) was an ACR Electronics Inc, SAR LINK. Model: SOS 300.
The primary function of the EUT is as a 406 MHz transmitter.

A full description and detailed product specification details are available from the manufacturer.

2.1.1 Specification Reference

FCC 47 CFR Part 15B, Clause 15.107

2.1.2 Equipment Under Test and Modification State

SOS 300 S/N: #1761 - Modification State 0

2.1.3 Date of Test

25-May-2017

2.1.4 Test Method

The EUT was placed on a non-conductive table 0.8m above a reference ground plane and 0.4m from a vertical coupling plane.

All power was connected to the EUT through an Artificial Mains Network (AMN). Conducted disturbance voltage measurements on mains lines were made at the output of the AMN. The AMN was placed 0.8m from the boundary of the EUT and bonded to the reference ground plane.

2.2.4 Test Method

The EUT was set up in a semi-anechoic chamber on a remotely controlled turntable and placed on a non conductive table 0.8m above a reference ground plane < support 0.1m above a reference ground plane.

A prescan of the EUT emissions profile was made while varying the antenna to the EUT azimuth and antenna to the EUT polarization using a peak detector; measurements were taken at a 3m distance. Using the prescan list of the highest emissions detected and their bearing and associated antenna polarisation, the EUT was then formally measured using a Quasi-Peak detector. The readings were maximised by adjusting the antenna height, polarisation and turntable azimuth, in accordance with the specification.
