MPE Calculations

- Frequency range : 2405 MHz ~ 2475 MHz

Maximum RF output power: 0 dBmMaximum antenna peak gain: 5.960 dBi

The EUT will only be used with a separation of 20 centimeters or greater between the antenna and the user.

The MPE calculation for this exposure is shown below.

The peak radiated output power (EIRP) is calculated as follows:

- Power density at the specific separation

Conclusion: N/A (The EIRP is below the limit.)

The maximum permissible exposure(MPE) of the general population/Uncontrolled for this device is 1.61 mW/cm²
