

Technical Justification letter for SAR Evaluation

December 14, 2012

FCCID: BEJMR400Q

The SAR evaluation is not required when the average power is less than 60/f(GHz).

The Max. peak power is **7.86 dBm**.

Calculation = $60 / 2.480\text{GHz} = 24.19\text{mW} = \mathbf{\underline{13.84\text{dBm}}}$

According to above comparing, the SAR evaluation is not required.
