

## 911 CALL PROCESSING PROCEDURE

August 18, 2000

Federal Communication Commission  
Equipment Approval Service  
P.O. Box 358315  
Pittsburgh, PA 15251-5315

**Subject: FCC regulation # 22.921 Emergency 911 Call Processing Procedures**  
**FCC ID: BGBMT345XFOR6A**

Gentlemen:

1. An emergency call can be made from any phone state, including but not necessarily limited to the following.:
  - ✓ **Keypad Lock**- All programming is over-ridden when (9-1-1 Send) is entered. The user must press and hold the 9 key when the "Emergency '9' Setting" is enabled in the user interface (reference section 10.4.7 of the users manual).
  - ✓ **No service available**- Due to a failure of the IR scanning procedures to find an acceptable favored, or neutral service provider, the phone shall search for any service to originate an emergency call. The phone will continue scanning until service is found.

If you have any questions or require additional information, please contact me by telephone (858) 538836, Facsimile at (858) 535-8801 or by e-mail at [kelley.mckown@cmts.dmea.com](mailto:kelley.mckown@cmts.dmea.com)

Sincerely,

A handwritten signature in blue ink that reads "Kelly David McKown". The signature is fluid and cursive, with "Kelly" on the left and "David McKown" on the right.

Kelly David McKown  
Sr. Test Engineer  
Mitsubishi Wireless
