Re: Request for Type Acceptance

To Whom It May Concern:

Enterprise Electronics Corporation, designer and manufacturer of meteorological radars, is requesting acceptance for a meteorological radar transmitter utilizing a state-of-the-art solid state modulator. The new modulator has been tested extensively and will be incorporated in systems to be designated "MiniMax-100C." The solid state modulator will offer higher reliability and better stability for enhanced Doppler performance. The systems will be manufactured and marketed by Enterprise Electronics Corporation, Enterprise, Alabama.

Sincerely,

ENTERPRISE ELECTRONICS CORPORATION
