RE: FCC ID: BV8M803M_ATCB002856

Attention: Kathy Grzovic

I have a few comments on this Application. Please note that further comments may arise in response to answers provided to the questions below.

1. Please note that the measured power between a PC and the original must be within 0.5dB for conducted power and 3dB for ERP. Please note that the last PC2 on this device added certain emissions designators at 25W. Please note that the conducted power for many of these emissions designators is more than 1dB different. For example in the 851-869MHz range the grant of Feb 2005 shows 25W, but the test report for this PC shows the highest measured power in this range as 20.65 W or 0.83dB lower. This then does not fall within the purview of an acceptable power variance for the purpose of a PC. Please make the measurement again to be in line with an acceptable power variance or please file for a new FCC ID number.

Response: Please refer to the revised test report uploaded with this response, showing the power measured after the device was properly tuned.

The items indicated above must be submitted before processing can continue on the above referenced application. Failure to provide the requested information may result in application termination.

Correspondence should be considered part of the permanent submission and may be viewed from the Internet after a Grant of Equipment Authorization is issued.

Please do not respond to this correspondence using the email reply button. In order for your response to be processed expeditiously, you must submit your documents through the AmericanTCB.com website. Also, please note that partial responses increase processing time and should not be submitted.

Any questions about the content of this correspondence should be directed to the sender.
