M/A-COM seeks an Equipment Authorization Grant for the SkyMASTR 800 MHz base station Public Safety LMR radio.

Exhibits include photographs, schematics, parts list, block diagram, tune up procedure, FCC Part 90 and 15 compliance verification reports, and measurement data. There is no Operator manual with this base station as it is factory configured per customer order, installed by M/A-COM field service personnel (or M/A-COM trained customer technicians) and no user controls or adjustments are available. Special software tools are required to make setting adjustments. It is merely connected to tower mounted site antenna, control interface cabling, powered up, and it is fully operational.

This product is intended for legacy and new deployment market applications. Power is continuously variable from 10 to 100 watts, and antennas are determined at site licensing time, based upon installation and signal coverage specifics.

Confidentiality letter and Rhein Tech Laboratories, Inc. agent authorization letter to act on M/A-COM's behalf for this modification, have been provided as exhibits as well.

Thank you for your kind consideration and timely review of this new base station addition to the M/A-COM, Inc. LMR product family.

Sincerely,

A handwritten signature in black ink that reads "Daryl S. Popowitch".
