Subject: E-Label implementation on Model 1721

FCC ID: C3K1721

To Whom It May Concern:

The E-label implemented on the device is secured and protected from modification by third-parties.

The E-label is loaded on the device at the factory after which device is then locked through a One Time Programmable (OTP) setting which disables the ability to change the E-Label. After being locked the device will ignore all attempts to modify the E-Label. In addition the E-Label is not modifiable through a firmware update.

Best Regards,

A handwritten signature in black ink, appearing to read "Kitty", written over a horizontal line.
