

# mobile antennas

# VHF Unity Gain Roof Mount

35-45 MHz

## SW35

SW35

The SW35 is the mobile antenna which RFI recommends in VHF low band, two frequency simplex or duplex applications. The relatively broad bandwidth of this base loaded antenna allows coverage of both transmit and receive frequencies in a small, physically manageable antenna.

The whip section of highly flexible 17-7PH stainless steel provides maximum durability, retaining its shape after knocks, bumps or bends. This whip section is fitted to a base loading coil which incorporates an impedance matching circuit. The coil is housed in black fibreglass with chrome plated brass end-fittings. The antenna is suitable for field tuning over the band 35-45 MHz.

The antenna is designed to fit standard VHF bases, such as the MB9 and can utilise the full line of accessories and fittings which are offered with this range.

- Recommended for two frequency applications
- Broad bandwidth allows coverage of both transmit and receive frequencies (Tx to Rx splits of up to 2 MHz)
- Base loaded construction
- Strong - fibreglass coil with chrome plated brass end-fittings
- Flexible 17-7PH tapered stainless steel radiator takes the knocks and keeps its shape

Typical VSWR response (SW35)

## Electrical

Model No.	SW35
Gain	Unity over a 1/4 wave
Frequency MHz	35 - 45
Power W	100
Tuned Bandwidth	1.5 MHz @ 1.5:1 VSWR 2 MHz @ 1.75:1 VSWR
Tuning	Field tune to minimum VSWR

## Mechanical

Model No.	SW35
Whip Material	Tapered 17-7PH stainless steel
Whip Length mm	1600 (including base coil)
Mounting	MB9, MB10 or MB12 bases (not included)
Cable and Connector	Not included, order separately

# VHF Unity Gain Roof Mount

66-175 MHz

**SW1  
TSW1  
111ST**

In the 66-175 MHz band,  $\frac{1}{4}$  wave antennas are preferred in many mobile applications. Mounted high on a vehicle they provide excellent omnidirectional performance, are easily tuned and are extremely affordable. They fit standard VHF roof mount bases such as the MB9 and can utilise the full line of accessories and fittings available for such applications.

## SW1

- Parallel stainless steel whip
- Interference thread locking mechanism prevents loosening of whip due to vibration

## TSW1

- 17-7PH tapered stainless steel whip
- Resilient construction retains shape after bending or knocks

## 111ST

- $\frac{1}{4}$  wave stainless whip with integral spring
- Ideal for heavy industrial applications

SW1, TSW1, 111ST

Typical VSWR response (SW1)

### MOUNTING NOTES

The SW1 and all the other antennas featured on this page are excellent performers when mounted on the roof. Mounting these antennas in other positions will result in degraded performance. As an example, in a gutter mount position as shown here, the result is a pattern 'pulled' to the open side of the roof which is likely to impact considerably on performance.

# Delta Series Broad Band Roof Mount

66-1000 MHz

**DSW1401**  
**DSW1402**

DSW1402

DSW1401

Delta Series antennas are broadband  $\frac{1}{4}$  wave antennas designed to cater to modern mobile transceivers which commonly cover an entire operating band of frequencies.

The Delta series antennas allow coverage of greater than 6% bandwidth for a VSWR of less than 1.5:1 in the VHF bands. This bandwidth is even greater at UHF frequencies due to the increased diameter to length ratio of the whip section.

This bandwidth is made possible through the extraordinary performance characteristics of the MB14 antenna base. The MB14 base is intricately constructed, much like a coaxial connector, and provides a useable frequency range extending well above 1000 MHz. The precisely controlled termination results in a superb match, and facilitates the unusually broad bandwidth.

Delta Series antennas are unity gain antennas, which deliver a standard, omnidirectional pattern when mounted in the centre of a metal roof.

The radiating sections are constructed from extremely flexible 17-7PH stainless steel to resist bending and deformity. The DSW1401 features a bright stainless steel finish and the DSW1402 is finished in stylish black high gloss plating. The antennas are supplied packaged complete with whip section, mounting base fitted with cable and an instruction sheet for easy installation by semi-skilled personnel.

- Broad bandwidth allows coverage of entire operating bands
- MB14 constant impedance base designed specifically for high performance at frequencies up to and above 1000 MHz
- Whip sections are interchangeable and easily replaced in the field
- 17-7PH stainless steel whip section
- Supplied package includes base, whip, cable and instruction sheet for easy installation
- Slimline ferrule

# VHF High Gain Roof Mount

The FW11 is a fibreglass roof mount antenna which provides the highest gain available in this frequency band. The gain and performance of this antenna make it ideal in areas with low or inconsistent signal strength. It fits standard VHF mounting bases such as the MB9 and can utilise the full line of accessories and fittings which are offered with this range.

It is important to note the narrow operating bandwidth of this antenna limits its use to single frequency applications.

The antenna is supplied to be tuned over its entire operating band. The antenna must be tuned in its installed position for minimum VSWR, with tuning quite critical due to the inherently high Q of the antenna. It fits standard VHF mounting bases, such as the MB9 and can utilise the full line of accessories and fittings which are offered with this range.

- 2.5dB high gain for superior performance
- Ideal in areas with low or inconsistent signal strength
- End fed  $\frac{3}{4}$  wave in a  $\frac{5}{8}$  wave package

## Electrical

Model No.	FW11	FW11-28	FW11-29

Mounting	Suits MB9, MB10 or MB12 bases (not included)		
Cable and Connector	Not included, order separately		

# VHF Roof Mount

70-175 MHz

## HPM-RM-99

HPM-RM-99

The HPM-RM-99 is a flexible, helically loaded electrical  $\frac{1}{4}$  wave for applications where height restrictions prohibit the use of standard quarter wave antennas.

Fitted to a standard MB9 antenna base, the HPM-RM-99 is less than 350mm tall. The lower section of the antenna is a solid fibreglass former. The upper section is a helically wound stainless steel section providing a flexible antenna suitable for height restricted areas. The antenna is ideal in mining applications because of this flexibility.

The antenna is ordered to a specified frequency and should be fine tuned in the field.

- Helically loaded electrical  $\frac{1}{4}$  wave which stands less than 350mm tall
- Extremely small and flexible

*NOTE: For low profile applications, also consider the TLA80 Series of transmission line style antennas*

## Electrical

Model No.	HPM-RM-99
Gain	-3dB over a $\frac{1}{4}$ wave
Frequency MHz	70 - 175
Power W	25

Whip Material	Fibreglass brass and stainless steel
Whip Length mm	350mm (max)
Mounting	Suits MB9 (not included)
Cable and Connector	Not included, order separately

# VHF Ground Independent Mopole™

The CD17 and CD18 are ground plane independent Mopole™ antennas which provide excellent performance in a “compromise” mounting position. The CD17 and CD18 also provide an extended bandwidth in a physical arrangement which is ideal for every application from sedans to the heaviest industrial vehicles.

- Ground independent Mopole™ design allows installation in a variety of mounting locations
- Bandwidth of over 3MHz for VSWR <1.5:1 (slightly less for CD18) Accommodates most duplex requirements
- High impedance matching transformer allows end feeding of electrical half wave element
- Shortened half wave radiators suit restricted height applications
- Tapered stainless steel or fibreglass versions available

NOTE: The CD17 and CD18 are highly compressed ½ wave antennas and although they function independently of a ground plane, perform markedly better if earthed. Earthing via a gutter or mirror style bracket will ensure the best possible field performance.

## Electrical

# VHF High Gain Roof Mount

148-175 MHz

**FW12**  
**SW12**

SW12 FW12

The SW12 stainless steel and FW12 fibreglass antennas are base loaded e wave high gain antennas which, when mounted high on a roof clear of obstructions, provide superior gain and pattern characteristics. The antennas are identical in performance so the choice of antenna depends on user preference.

Both antennas are easily tuned in the field for minimum VSWR. They mount via standard VHF bases and can utilise the full line of accessories and fittings which are offered in this range.

## SW12

- 17-7PH tapered stainless steel whip fitted to a durable fibreglass base loading coil
- Resilient construction retains shape after bending or knocks

## FW12

- Braided fibreglass antenna with integrated base loading coil
- Black UV stabilised heatshrink mounted over chrome plated brass ferrule

Typical VSWR response (FW12)

The FW12 and SW12, when mounted in the centre of the roof, provide excellent gain and omnidirectional performance - free from any nulls or holes. The antennas are ideal for applications requiring centre roof mounting.

# VHF Ground Independent Mopole™

148-175 MHz

## CD25

CD25

The CD25 has been designed for applications where height restrictions are an issue. The antenna lends itself well to mining applications or other low clearance installations .

The CD25 is essentially a “shortened” version of our popular CD28 series antenna design. As the height has been shortened for lower profile applications, so the performance and associated bandwidth have been compromised.

The end fed design of this Mopole™ incorporates a unique transformer in the base section. The transformer is housed in a high impact thermoplastic moulding matched to a rugged PVC whip section.

The CD25 is a ground independent antenna, making it ideal for use in “alternative” mounting locations such as gutters, mirrors or non-conductive surfaces. The antenna is supplied with an MBC base allowing for the entire antenna to be removed and replaced at will.

- Reduced height - ideal for use in mining and underground use
- Robust construction
- Unique patented design (Aust Pat. #596830)

Typical VSWR response (CD25-42-50)

Free space radiation pattern

## Electrical

# VHF Ground Independent Mopole™

The CD28 series are ground independent Mopole™ antennas ideal in "alternative" mounting positions such as gutter, mirror or trunk mounts.

Utilising a patented matching circuit, the CD28 series antennas are end fed dipole antennas combining a durable thermoplastic housing with a flexible tapered stainless whip section resistant to knocks and bends.

- Performance - Exhibits 3 dB improvement in performance over a ¼ wave whip
- Versatile - Ground independent design allows use in alternative mounting locations
- Rugged - The transformer circuit is housed within a high impact thermoplastic moulding which is virtually indestructible
- Unique termination method simplifies installation and re-cabling in the field
- Designed, manufactured and patented in Australia [Australian Patent # 596830 and 656793]

## Electrical

Model No.	CD28-37-50	CD28-41-50	CD28-37-70	CD28-41-70
Gain	3dB over a ¼ wave. See note (1)			
Frequency MHz	133 - 163	148 - 175	133 - 163	148 - 175
Power W	50			
Tuned Bandwidth	4 MHz @ 1.5:1 VSWR 8 MHz @ 2.0:1 VSWR	4 MHz @ 1.5:1 VSWR 8 MHz @ 2.0:1 VSWR	4 MHz @ 1.5:1 VSWR 8 MHz @ 2.0:1 VSWR	5 MHz @ 1.5:1 VSWR 10 MHz @ 2.0:1 VSWR
Tuning	Field tune to minimum VSWR using supplied chart			

## Mechanical

Model No.	CD28-xx-50	CD28-xx-70
Whip Material	17-7 PH tapered stainless steel whip with moulded base coil assembly	
Whip Length mm	1340	
Mounting	MBC base (included)	Threaded stud
Cable and Connector	Not included, order separately. See note (2)	

(1) Mopole™ antennas such as the CD28 have been shown to exhibit a 3dB improvement in received signal level in the field when compared to a ¼ wave whip however in pattern tests exhibit only 1.5 to 2dB over a ¼ wave (equivalent to 1.5-2dBi). This improvement in performance can be attributed to a lower radiation angle level of these ground independent antennas.  
 (2) Available preterminated with 5m 8058 RG58C/U. Use -73 or -53 suffix to replace -70 or -50 suffix.

Australian Patent No. 596830 and 656793

# VHF Glass Mount

144-175 MHz

## APS151.3

APS151.3

The APS151.3 is a glass mount antenna employing a small, stylish coupling box mounted inside the vehicle. This allows the radio signal to be transmitted through the vehicle glass to a half wave radiating element mounted externally. This high impedance matching network delivers low loss power transfer and the end result is comparable to a roof mounted antenna without drilling a hole.

- Performance - unity gain end fed ½ wave elements don't require a ground plane to achieve low VSWR and low radiation angle
- Secure Mounting - the high performance mounting provides long lasting holding power
- Convenient - installation and tuning complete in minutes with comprehensive instructions

Typical VSWR response

The APS151.3 is most commonly mounted on a rear window. This pattern is a little distorted in shape but will offer good all round performance.

# UHF Ground Independent Mopole™

380-520 MHz

**CD50 Series  
CD51 Series**

CD50

The CD50 and CD51 Series UHF ground independent Mopole™ antennas are versatile and popular antennas, providing excellent performance in virtually any mounting position.

When mounted on a vehicle gutter or similar position, these UHF Mopoles™ provide optimum performance with a largely omnidirectional pattern. Due to the low angle of radiation inherent in the dipole antenna pattern, a 4.0 dB improvement in performance is typical when compared to a ¼ wave whip in the centre of a metal roof.

The end fed design of the UHF Mopoles™ incorporates a truly unique transformer in the base section. In this patented feed assembly, the dielectric of the coaxial feeder cable is trimmed to a set length and then introduced into the coil in termination. The result is a precisely matched feed which is so consistent that tuning to frequency from a chart becomes a matter of course.

CD51 antennas are fitted with a flexible nylon radome over a copper element - ideal in industrial applications. CD50 antennas have an elegant and durable tapered stainless steel whip section.

There are two styles of mounting arrangements offered. The CD50-xx-70 and CD51-xx-70 versions mount via a threaded stud and nut assembly. The antenna can be easily terminated, tuned and re-terminated in the field using the instructions supplied. Its patented design allows the coaxial cable to be replaced in the field without specialised tools or soldering.

The CD50-xx-50 and CD51-xx-50 versions mate with the MBC coaxial base providing an internal, permanent connection in a completely sealed unit. The MBC base is easy to install and allows the entire antenna to be removed and replaced at will.

- Versatile - Ground plane independence allows alternative mounting locations
- Performance - High performance and largely omni-directional pattern when not centre roof mounted
- Convenient - Patented design allows termination or re-termination in seconds
- Stainless steel whip or flexible nylon whips cater to individual needs
- Durable - Base coil is virtually indestructible
- Unique transformer design
- Australian Patents #596830 and #656793

# UHF Ground Independent Mopole™

380-520 MHz

**CD50 Series**  
**CD51 Series**

Typical VSWR response (CD51)

UHF Mopoles™ are excellent performers even when gutter mounted as this pattern demonstrates. The Mopole™ design has resulted in an antenna which is largely omnidirectional in spite of its gutter mounting position.

Mounting	MBC base (included)	Threaded stud	MBC base (included)	Threaded stud
Cable and Connector	Not included, order separately. See note (2)			

(1) Mopole™ antennas such as the CD50 and CD51 exhibit a 4dB improvement in performance over a ¼ wave whip but in pattern tests deliver only 2.0 to 2.5dB of actual gain. This improvement in performance can be attributed to a lower angle of radiation and is of particular benefit to users in rugged terrain conditions and in heavily built up city areas.

(2) Available preterminated with 5m 8058 RG58C/U. Use -73 or -53 suffix to replace -70 or -50 suffix.

Australian Patent No. 596830 and 656793

# UHF Phasemaster™ Roof Mount

400-520 MHz

**CSW10 Series  
CSW20 Series**

CSW24

The CSW10 and CSW20, the original Phasemaster™ antennas, are our most popular roof mounts due to their unmatched performance and superior strength. The highly flexible stainless steel whip and consistent 4.5dB gain has made them a favourite in virtually all roof mount applications.

- Outstanding performance - precisely matched phasing coil separating  $\frac{5}{8}$  wave over  $\frac{1}{2}$  wave electrical elements
- Available in classic s/s finish or black high gloss finish
- Supplied in colour coded bands then fine tuned in field with chart
- Flexible 17-7PH Stainless steel whip will always bounce back after knocks and bumps

Typical VSWR response (CSW14)

This pattern shows that the Phasemaster™ antenna is meeting the gain and omnidirectional performance we have stated in our specifications. The antenna is producing a "textbook" pattern and is delivering 4.5dB gain. This antenna is an excellent performer and is highly recommended for any roof mount application.

# UHF Elevated Feed Mopole™

The CD91 Series are 4 dB elevated feed Mopole™ antennas which are suited to mounting on vehicle roof racks and gutters. These antennas are specifically designed for use on emergency service vehicles to elevate a ¼ wave antenna above lights and sirens.

The antenna can easily be upgraded to a high gain antenna in seconds, by unscrewing and replacing the whip section. The antenna is ordered pre-tuned to a specific band.

- Performance - provides 4 dB improvement over ¼ wave even when mounted on roof rack or gutter mount
- Quality construction - choke assembly is hand crafted from solid brass and chrome plated
- Ideal on emergency service vehicles elevating the antenna above lights and sirens
- Upgrades to high gain antenna in seconds
- Order in pre-tuned bands
- Can be used with a variety of mounts. See accessories section for options.

Typical VSWR response (CD91)

## Electrical

Model No.	CD91-65-70	CD91-70-70	CD91-71-70	CD91-72-70
Gain	4dB over a ¼ wave. See note (1)			
Frequency MHz	400 - 420	450 - 470	470 - 490	490 - 520
Power W	100			
Tuned Bandwidth	Entire specified band @ <1.5:1 VSWR			
Tuning	Supplied pre-tuned			

## Mechanical

Model No.	CD91-65-70	CD91-70-70	CD91-71-70	CD91-72-70
Colour Code	Black	Red	Blue	Yellow
Whip Material	Flexible stranded stainless steel whip with black PVC coating and chrome plated brass elevated feed choke assembly			
Whip Length mm	395 (includes whip and choke section)			
Mounting	Threaded stud and nut assembly mounts in either 16mm or 13mm dia. mount hole			
Cable and Connector	Not included, order separately. See note (2)			

(1) Mopole™ antennas such as the CD91 exhibit a 4dB improvement in performance over a ¼ wave whip but in pattern tests deliver only 2.0 to 2.5dB of actual gain. This improvement in performance can be attributed to a lower angle of radiation and is of particular benefit to users in rugged terrain conditions and in heavily built up city areas.  
 (2) Available preterminated with 5M RG58 cable. Use -73 (8058 cable) or -75 (9001 cable) to replace -70 suffix.

# UHF Elevated Feed Mopole™

400-520 MHz

## CD93 Series CD94 Series

CD93

The CD93 and CD94 Series are high performance elevated feed mobile antennas which can be used in virtually any mounting position. When gutter or roof bar mounted, high above a vehicle, CD93 and CD94 Series antennas deliver a full 6.5dB of gain over a ¼ wave whip.

- Totally ground plane independent
- Elevated feed boosts radiating element above obstructions
- "Phasemaster™" whip section provides superior performance and strength
- Quality construction - choke assembly is crafted from solid brass and available in both chrome and black finishes
- Fibreglass whip option available
- Can be used with a variety of mounts. See accessories section for options.

See also new CD900 Series UHF CBRS antennas on page 132

Typical VSWR response (CD93 Series)

This pattern shows that when elevated above obstructions, the CD93 is fully ground independent and delivers superior gain. This pattern is showing that the published gain figures of 6.5dB over a ¼ wave whip are justified.

TEST FREQUENCY: 460 MHz  
REFERENCE ANTENNA  
MODEL: SW7  
MOUNT: MB10 Roof Centre  
TEST ANTENNA  
MODEL: CD93  
MOUNT: GM2 Gutter Drivers Side

## Electrical

Model No.	CD93-65-70	CD93-70-70	CD93-71-70	CD93-72-70
	CD94-65-70	CD94-70-70	CD94-71-70	CD94-72-70
Colour Code	Black	Red	Blue	Yellow
Gain	6.5dB over a ¼ wave. See note (1)			
Frequency MHz	400-420	450-470	470-490	490-520
Power W	100			
Tuned Bandwidth	Entire specified band @ <1.6:1 VSWR			
Tuning	Supplied pre-tuned			

## Mechanical

Model No.	CD93 Series	CD94 Series
Whip Material	17-7PH stainless steel with black high gloss finish	17-7PH plain stainless steel
Whip Length mm	810 max (Includes whip and choke section)	
Mounting	Threaded stud and nut assembly mounts in either 13mm or 16mm dia. mount hole	
Cable and Connector	Not supplied, order separately. See note (2)	

(1) Mopole™ antennas such as the CD93 and CD94 have been shown to exhibit a 6.5dB improvement in received signal level in the field when compared to a ¼ wave whip however in pattern tests exhibit only 1.5 to 2dB over a ¼ wave (equivalent to 1.5-2dBi). This improvement in performance can be attributed to a lower radiation angle level of these ground independent antennas.

(2) Available preterminated with 5M RG58 cable. Use -73 (8058 cable) or -75 (9001 cable) to replace -70 suffix.

# UHF Broadband Dipole

The CD440 is a broadband UHF Mopole™ designed to cover the entire 400-470MHz band without adjustment. Being a ground independent design, the CD440 is suited to alternative (non-roof) mounting locations such as bull bar or roof rack. It's versatility makes it ideal for emergency service applications requiring broad bandwidth and high performance.

- Broadband - covers 400-470MHz without adjustment
- Circuit board radiator provides consistent gain across entire frequency band
- Versatile - Ground plane independent allowing alternative mounting locations
- Durable - thick fibreglass radome fitted to a heavy duty spring
- Can be used with a variety of mounts. See accessories section for options.

## Electrical

Model No.	CD440
Gain	4dB over a ¼ wave. See note (1)
Frequency MHz	400 - 470
Power W	100
Tuned Bandwidth	Entire specified band @ <1.5:1 VSWR
Tuning	Supplied pre-tuned

## Mechanical

Model No.	CD440
Whip Material	31mm dia. woven black fibreglass
Whip Length mm	490
Spring	Electropolished stainless steel (integrated)
Mounting	Mounts via a 12mm dia. threaded stud
Cable and Connector	5.0m RG58C/U fitted, no connector supplied

(1) As the CD440 is a half wave dipole antenna, actual pattern tests show unity gain vs. a half wave dipole. In the field, however, the CD440 will deliver performance which is approximately 4dB better than a ¼ wave whip mounted in the centre of a metal roof, mainly because it exhibits a lower angle of radiation.

# UHF Glass Mount

380-474 MHz

## AP354 Series

AP354

The AP354 is a broadband glass mount antenna specifically designed for Tetra mobile applications. Featuring patented On-Glass technology the AP354 transmits and receives through the glass making it ideal for fleet use with a no-holes installation. The antenna has been specifically designed for broadband use with no additional tuning required across the whole band from 380-474MHz for a VSWR of less than 1.9:1.

- Unique - glass mount design transmits and receives through the glass
- Weatherproof - water cannot enter the vehicle through gasket failure or cable channels
- Efficient - mounts high on the vehicle for maximum omnidirectional radiation pattern
- Broadband - requires no field tuning across entire frequency range
- Time-saving - simple mounting method allows no-hole installation in minutes

Typical VSWR response (AP354)

## Electrical

Model No.	AP354
Gain	Unity over ¼ wave

Whip Length mm	254
Mounting	Glass mount
Cable and Connector	5.0m RG58C/U fitted, no connector supplied

# UHF Glass Mount

The AP454 Series is a third generation glass mount antenna for UHF applications. The AP454 features an unobtrusive interior mounted coupling box and a number of whip options.

- Convenient - installation and tuning completed in minutes
- High gain options available
- Broadband - AP454-72-4G provides broadband 3dB gain across entire specified bandwidth

## WHIP OPTIONS

**AP454-3G** - end fed ½ wave

**AP454-xx-5G** - 5/8 over a ½ wave collinear

**AP454-72-4G** - end fed 5/8 wave

Typical VSWR response (AP454-5G)

Typical VSWR response (AP454-72-4G)

Typical VSWR response (AP454-3G)

The radiation pattern for the AP454-3G, while clearly a compromise in performance over a ¼ wave whip, remains a much better option in the UHF band than a mis-applied antenna. The nulls in the pattern shown are largely due to the placement of the antenna slightly below the vehicle roof line.

# VHF Low Profile

70-85 MHz

## TLA 80

TLA80

The TLA80 is a low profile transmission line antenna for use in mobile applications with severe height restrictions. Transmission line design allows the antenna to deliver excellent omnidirectional coverage with a substantial height reduction over standard whip style antennas.

These exceptionally rugged antennas are commonly used in high risk applications such as trains and emergency vehicles or in high vibration environments.

The TLA80 is constructed from alodined aluminium and supplied with a rubber gasket for secure sealing.

- Low Profile - Only 70mm tall makes it ideal for height restricted applications
- Vertically polarised radiation pattern when mounted horizontally
- Frequency tuneable in the field

# UHF Low Profile

255-530 MHz

## TLA600 Series

TLA600-57

The TLA600 series is a range of low profile transmission line antennas for use in applications where little or no ground plane exists.

These antennas can be used on buses, trucks, trains or in telemetry applications where the antennas are to be mounted on a fibreglass roof or similar non-conductive surface.

- Available with integrated active GPS antenna for asset tracking/vehicle location applications on request. \*
- Functions with or without a ground plane, allowing one antenna to be used in an entire system, regardless of mounting application.\*\*
- Performance equivalent to a  $\frac{1}{4}$  whip wave mounted in the centre of a metal roof
- All antennas supplied pre-tuned to the nominated bands and require no field adjustment
- Low profile (<80mm) height overall
- Plastic moulded radome is attractive and durable, resistant to car washes, UV Stable and weatherproofed
- Neoprene gasket seal provides excellent waterproofing of fitted antenna
- Available in all major UHF bands

Typical VSWR response for TLA600-71

This is a logarithmic plot of the horizontal (H Plane) pattern of the TLA600 Series. With a peak gain of 2.1 dBi, the TLA-600 is performing effectively identically to a  $\frac{1}{4}$  wave whip.

\* When ordering specify - GPS suffix - i.e. TLA600-57-GPS  
\*\* TLA620-99 cannot be used without a ground plane

# UHF Unity Gain Low Profile

380-520 MHz

## TLA400 Series

TLA400

The TLA400 is a low profile transmission line antenna ideal for applications with strict height requirements. The TLA400 delivers performance equivalent to a 1/4 wave whip, yet measures only 66mm tall. It's rugged construction and low profile make it an ideal choice for industrial, rail and mining applications.

- Low Profile - Only 66mm tall - ideal for height restricted applications
- Extremely Rugged - Cast aluminium construction
- Reliable - Fully pattern tested in verified range conditions
- Corrosion Resistant
- Fully interchangeable with existing products in the field

Typical VSWR response

This is a sweep in the horizontal plane of the TLA400. It is clear that the pattern is identical to that of a 1/4 wave whip. This antenna is highly recommended but must be centre roof mounted.

TEST FREQUENCY: 410 MHz

# Cellular Transit Antenna

The TLA2000 is an ideal antenna solution for GSM data applications in both fixed and mobile situations. Designed to offer true dual band performance the TLA2000 is ready for use with the latest GSM (GPRS) modems. With a high impact resistant vacuum formed ABS radome and neoprene mounting gasket, the TLA2000 can be used for indoor or outdoor applications.

- Applications include public vending machines, ATM kiosks and industrial automotive use
- Designed for use on conductive or nonconductive surfaces
- TLA3000 model incorporates integrated GPS antenna

# Trunking Glass Mount

806-870 MHz

**AP868.3**

AP868.3

The AP868.3 has been specifically designed for the 806-870MHz international trunked mobile band. The antennas look identical to their cellular cousins but are optimised for full 3dB gain performance within the trunking band.

- Limited lifetime warranty
- No-fuss installation - antenna supplied completely assembled and ready for installation
- High performance - unique coupling design delivers genuine 3 dB gain
- Pliable mounting foot for maximum adhesion to curved windows
- Black high gloss plating won't scratch, chip or peel

Typical VSWR response

The pattern shown for the AP868.3 shows that the antenna provides an excellent, largely omnidirectional radiation pattern and exhibits 3dB gain over a ¼ wave whip mounted in the centre of a metal roof.

TEST FREQUENCY: 850 MHz

# High Gain Trunking Roof Mount

The SW1585 antenna is derived directly from our high performance cellular roof mount antenna. It is a 3 dB gain antenna, optimised for the 806-870MHz international trunked mobile bands. The SW1585 will deliver excellent all-round performance and is generally considered to be the optimum choice for professional users.

At the heart of the SW1585 is the MB14 antenna base. This base is intricately constructed, much like a coaxial connector. The precisely controlled termination which is achieved is reliable electrically and mechanically and provides a superb match, resulting in a broad bandwidth, and extremely low VSWR.

- High performance
- Limited lifetime warranty
- Roof mounting for optimum performance
- MB14 base for superior match and bandwidth
- Black high gloss plating won't scratch, chip or peel

# High Gain Trunking Collinear

806-870 MHz

## CD1595

CD1595

The CD1595 is a high gain mobile trunking band antenna providing a genuine 6 dB gain, ideally suited for use in fringe areas and rural applications where performance is paramount.

These antennas are extremely robust in design with the radiating element housed in a black fibreglass radome fitted to an integral heavy duty electropolished stainless steel spring.

With a 13mm stud mount, these antennas may be installed onto a number of mounting brackets such as mirror, bull bar, gutter or fender mounts and are ideal for installations in commercial vehicles, four wheel drives and trucks.

These antennas have been factory terminated with an FME connector and are supplied complete with a Mini-UHF adaptor to simplify installation.

- Suits Australian and International trunking bands
- 6 dB Gain ideal for fringe areas and rural applications
- Supplied pre-terminated with connectors to suit most radio types
- Robust design for heavy duty applications

## Electrical

Cable and Connector	5.0m Cellfoil® low loss cable with FME fitted mini UHF adaptor included

# Systems engineering services

RFI offer an extensive range of design, development and related services in support of our customers. These include:

- Site layout and construction advice
- RF systems design
- Intermodulation and interference analysis
- Retuning
- Reconfiguration advice
- Site fault finding
- Multicoupling equipment design and selection

We welcome the opportunity to work with you through each requirement including initial design, tender preparation, right through to installation and commissioning of systems.

Our objective is to provide you with the most complete service utilising our extensive engineering expertise and product knowledge across our entire product portfolio.

**ITG2000**

ITG2000

A breakthrough in mobile antenna design!

Finally, an antenna which can radiate effectively from the inside of the vehicle. Unlike most mobile antennas, which have a vertical whip section, the antenna is a tiny radiator which lies flat inside the vehicle windscreen!

Not only is the Duet™ the first truly effective antenna designed to be mounted inside the vehicle, it provides full dual band performance, covering both the 900 and 1800 MHz bands. The secret of the design lies in its unique patented matching circuit. The antenna uses a stripline fed slot radiator with a patch circuit used to introduce dual resonance at 900 MHz and 1800 MHz. The result is an omnidirectional pattern in both bands and a unique mix of vertical and horizontally polarized radiation.

In performance terms the Duet™ is extraordinary. Free space field tests show the antenna exhibiting unity gain over a ¼ wave at GSM900 (2.1 dBi) and 1.5 dB Gain over a ¼ wave in the GSM1800 MHz band (3.5dBi). When mounted on a vehicle in full network drive tests however the amazing performance of this antenna is really revealed.

The Duet™, mounted on a vehicle screen and tested in network drive tests, is rated at -2dB over a ¼ wave, but this is some 4-5 dB BETTER than even the best externally mounted glass mount antennas and more than 11dB better than using a portable phone in the car without an external antenna! The unique mix of polarization and great efficiency of the radiator make the Duet™ a high performance antenna, not a performance trade off as would normally be expected when using an internal antenna.

Superb performance (especially in urban areas) and no external parts. This simplifies installation, pleases ever more fastidious car owners and eliminates vandalism and car wash problems. The Duet™ antenna is truly a breakthrough product, one which finally addresses the requirements of the network operators and still meets the desires of end users.

# Dual Band Cellular Glass Mount

890-960 MHz  
1710-1880 MHz

**ITG2000**

- Easy to install - A simple peel and stick mounting foot is placed on the inside of the vehicle glass. Run the pre-terminated cable assembly to the car kit - connect and go!
- Discreet - The mounting section is slimline and unobtrusive
- Dual Band compatible - Designed to operate in single and dual band GSM applications
- Completely Internal - No threat of vandalism, no concerns of external wind noise and no car wash damage
- Versatile - The tiny radiating section can be mounted on front or rear windscreens
- High Performance - Optimised for operation with mixed polarization cell sites. Eliminates signal fading and outperforms most external glass mounted antennas

ITG4000

### The Global Antenna

The Quadrant™ is perhaps the most versatile cellular antenna in the world. It can be used in almost any of the existing cellular systems, will provide superior performance to externally glass mounted antennas and yet can be mounted quickly and easily inside the vehicle with no external parts.

A derivation of the Duet™ dual band product (and included in the same patent), the Quadrant™ uses the same stripline fed slot radiator technology with patch circuits used to introduce multi band performance. Being slightly larger than the dual band Duet™, the Quadrant™ has been configured to suit not only GSM900 and GSM1800 systems but also covers AMPS, TDMA and CDMA 800 systems. It also covers the GSM1900 and PCS1900 bands. This enables the Quadrant™ to be used in more than nine out of ten cellular systems anywhere on the globe.

Ship the Quadrant™ to almost any market in the world, and the antenna can be installed quickly, easily and yet deliver incredible performance. With a unique mix of vertical and horizontal polarisation (as is also shown by the cell sites themselves), the Quadrant™ will work especially well in urban and suburban areas. It even (just) out performs it's sister, the Duet™, because of the very slightly larger footprint.

Free space field tests show the Quadrant™ exhibiting just over unity gain relative to a quarter wave at GSM900 and AMPS/TDMA/CDMA 800 Bands (i.e. 2.5 dBi) and 1.8 dB of Gain relative to a quarter wave in the GSM1800 MHz and GSM/PCS1900 MHz bands (i.e. 4dBi). When mounted on a vehicle and tested in full network drive tests (which were performed in an urban environment) it performs even better.

Mounted on a vehicle screen, the Quadrant™ is rated at -1dB over a ¼ wave, but this is some 5-6 dB BETTER than even the best externally mounted glass mount antennas and more than 12dB better than using a portable phone in the car without an external antenna!

The Quadrant™ is truly a breakthrough. There is no performance trade-off. One antenna provides global cellular coverage (ideal for vehicle manufacturers or hands-free kit manufacturers) with a single item. No installation mistakes, with one antenna for every job, and a simple installation with no external parts to be fitted.

Supplied complete with mounting instructions and a pre-terminated low loss, fully shielded coaxial cable, the Quadrant™ can help reduce inventories, reduce installation costs, boost air time and deliver superior customer satisfaction in just about every cellular system in the world.

# Multi Band Cellular Glass Mount

- Truly global cellular coverage.- One antenna suits all of the following systems: GSM 900, GSM 1800 (DCS 1800, PCN 1800), GSM 1900, AMPS, TDMA, CDMA 800, DECT, PCS 1900, (CDMA1900)
- Superb performance – approaches a quarter wave antenna and easily out-performs external mounted glass mount antennas. Patented mixed polarity design.
- Reduce inventories – one antenna suits all systems and can be shipped globally
- Completely internal – no impact on prestige vehicles, no threat of vandalism, no car wash damage and simplified installation
- Supplied ready to go with peel and stick mounting and pre-terminated, fully shielded low loss coaxial cable

ITG5000

The Quintet™ offers incredible versatility. It can be used in almost any cellular system, will provide superior performance to externally glass mounted antennas and yet can be mounted quickly and easily inside the vehicle with no external components.

A derivation of the Duet™ and Quadrant™ dual/multi band products, the antenna uses stripline fed slot radiator technology with patch circuits used to introduce multi band performance. Being slightly larger than the multi band Quadrant™, the Quintet™ has been configured to suit not only GSM900 and GSM1800 systems but also covers AMPS, DAMPS and CDMA 800, SMR systems, PCS1900, DCS1800 and UMTS/3G.

The incredible versatility of the ITG5001 is taken one step further with the ITG5000 version which is effectively two antennas in one. This antenna provides global cellular coverage and GPS satellite coverage making it an ideal telematics solution for vehicle manufacturers, or car kit installers, reducing inventory and installation time.

The GPS element is a small ceramic patch antenna with a high performance active amplifier and industry leading noise figure to ensure faster acquisition of multiple satellites. The Quintet™ is equally appropriate for in-vehicle integrated telematics solutions or after market applications calling for both cellular and GPS installations in recreational or industrial vehicles.

Ship the Quintet™ to any market in the world, and the antenna can be installed quickly, easily and yet deliver incredible performance. With a unique mix of vertical and horizontal polarization (as is also shown by the cell sites themselves), the antenna can be mounted at any angle and still deliver optimum performance.

- The ultimate telematics solution - GPS and cellular in one antenna for almost any market worldwide. (ITG5000)
- Perfect solution for private vehicles, fleet management and vehicle OEMs etc.
- Completely internal – simple installation, no external parts.

## EAM2000

EAM2000

The EAM2000 is a breakthrough antenna, able to be mounted completely inside wireless equipment. This makes it ideal for use in a variety of “new” wireless applications including ATM’s, vending machines and remote monitoring units.

Being ground plane insensitive it can be installed either on or off ground plane. With a depth of only 13 mm, this makes the EAM2000 ideal for the tightest of mounting positions.

- Ideal for the latest M2M applications
- Slimline - for ease of installation
- GSM Dual or single band compatible
- Completely internal - no threat of vandalism or damage

Typical VSWR response GSM 900

# Cellular Roof Mount

Roof mount antennas are recommended by system operators, mobile manufacturers and system designers as they provide the strongest reception and most reliable performance of any cellular mobile antenna.

At the heart of each RFI roof mount antenna is the MB14 base. The base is intricately constructed, much like a coaxial connector. The precisely controlled termination is reliable electrically and mechanically provides a superb match resulting in a broad bandwidth.

- Roof mounting for optimum performance
- Black finish will not scratch or peel
- Limited lifetime warranty
- SW1495 (CDMA only) offers 5 dB gain for maximum range in country or fringe areas
- SW1486/1686 Magnetic base versions available for portable applications complete with protective rubber boot

# e-glass® Cellular Dual Band

890-960 MHz  
1710-1880 MHz

## EG880 Series

EG883

The EG800 series e-glass® antennas are genuine dual band antennas designed specifically for GSM 900/GSM 1800 applications. All of these antennas offer superb, true dual band performance.

The e-glass® utilises an elliptical slot radiator in the coupling box, with a patch element housed in the mounting foot. The patch element is E-shaped to allow the coupling of both bands very effectively. The whip element is fully moulded with dual phasing coils (3dB whip only), the result being an antenna that provides abundant gain in both the 900MHz and 1800MHz bands.

Featuring a new-look mounting foot and coupling box, e-glass® antennas are supplied complete with a pre-terminated lead of low loss, fully shielded coaxial cable.

- True dual band performance at 900 and 1800 MHz
- Fully shielded low loss pre-terminated cable supplied
- EG884 combination kit supplied with unity and 3dB gain whips offering choice of gain and reducing inventory

Typical VSWR response (EG880)

EG880 typical E-plane response at 925 MHz

EG880 typical E-plane response at 1795 MHz

## Electrical

Model No.	EG880	EG883	EG884

Australian Patent App No. 34316/02

# CDMA Cellular Glass Mount

The glass mount antenna has long been the world standard for cellular mobile antennas. This glass mount antenna is supplied completely assembled ready for quick, effortless installation. The mounting foot is constructed from flexible plastic and mounts securely using very high bond tape.

Established as the world's premier cellular mobile antenna, the glass mount antenna is ideal for both end-users and original equipment manufacturers ideal for virtually all applications.

- 'Solid State' Slimline Coupling Box - Unsurpassed performance in a low profile housing
- Pliable mounting foot for maximum adhesion to curved windows coupled with a choice of whips.
- Simple Installation - Supplied completely assembled and ready for installation with very high bond tape (VHB) - simply peel and stick
- Distinctive packaging for easy stock identification
- Incorporates turbulence spiral for whisper quiet performance

## Electrical

Model No.	AMD877.3 Series
Gain	3dB over a 1/4 wave
Frequency MHz	820 - 896
Power W	50
Tuned Bandwidth	Entire specified band @ <1.9:1 VSWR
Tuning	Supplied pre-tuned, ready for installation

## Mechanical

Mounting	Mounted on glass with VHB tape
Cable and Connector	Supplied with 5.0m Cellfoam® cable. Please specify mini UHF, FME or TNC connector.

# Cellular Elevated Feed

820-960 MHz

**CD1210**  
**CD1610**  
**CD1515**

This elevated feed 1.5dB gain mobile antenna is available in CDMA, GSM and PTMP bands. The “elevated feed” construction of the antenna is designed to keep the upper radiating portion of the antenna above the roof level to achieve an omnidirectional pattern.

This versatile ground independent design allows installation in “alternative” mounting locations where a roof or glass mount antenna is not desired or will not provide adequate performance. The antenna can be used with or without the optional mounting kits available. These mounting kits provide these antennas with the versatility to be mounted on vehicle gutter, fender, boot and other locations.

- High performance - Elevated feed design requires no ground plane for omnidirectional 1.5 dB gain coverage
- Ground independent design allows installation in almost any location
- Large variety of mounts available to suit any application

Typical VSWR response (CD1610)

## Electrical

Model No.	CD1210	CD1610	CD1515
Gain	1.5dB over a ¼ wave		
Frequency MHz	820 - 896	890 - 960	850 - 930
Power W	40		
Tuned Bandwidth	Entire specified band @ < 1.9:1 VSWR

## Mechanical

Model No.	CD1210	CD1610	CD1515
Whip Material	Stainless steel with black finish		
Whip Length mm	195	180	188
Mounting	14mm Stud mount		
Cable and Connector	Supplied with 5.0m Cellfoam® cable. Specify FME, mini UHF, FME or N-male connectors		

# Cellular Elevated Feed

Elevated feed antennas provide high performance in virtually any mounting position. The elevated feed design raises the radiating element above the vehicle roof or other obstructions to provide a strong omnidirectional pattern and high performance for vehicle gutter, fender, boot or magnetic mounting.

- High performance omnidirectional gain
- 'Problem Solver' - Elevated feed design eliminates need for a ground plane and boosts the radiating element over obstructions
- Black finish will not scratch or peel
- Limited lifetime warranty
- CD1250 (CDMA only) offers 5 dB gain for maximum range in country or fringe areas
- Range of fittings available including fender (shown), gutter and magnetic mount

# Cellular High Gain Collinear

824-960 MHz

## CD1790 Series

CD1795

The CD1790 Series are high gain mobile cellular antennas catering for both CDMA and GSM900 bands and ideally suited for use in fringe areas and country applications.

These antennas are extremely robust in design with a patented PCB designed radiating element housed in a black or white fibreglass radome fitted to an integral heavy duty electro-polished stainless steel spring.

With a 13mm stud mount, these antennas may be installed on a number of mounting brackets and are ideal for installations in commercial vehicles, four wheel drives and trucks. They can also be used as fixed base station antennas for wireless local loop applications.

These antennas have been factory terminated with an FME connector to simplify installation and come complete with a TNC and Mini-UHF adapter to suit all phones and require no further cable termination.

- CDMA and GSM900 compatible
- High gain ideal for fringe areas and rural applications
- Available in white: CD1795-W or CD1797-W
- Available with GPS sub-assembly (see page 53)
- Patented PCB based collinear design offering the ultimate in pattern and gain stability

Other model and gain variations available upon request

## Electrical

# Elevated Feed Mopole™

These 1.5 dB gain elevated feed antennas are ideal in applications where height and aesthetics are a consideration. The elevated feed design raises the radiating element above the vehicle roof level to provide a strong omnidirectional pattern and high performance. The ground independent design provides consistent performance regardless of mounting position. Mounting kits are available for both gutter and mirror mounts.

- Economical - Our most affordable cellular antenna for gutter and mirror mount or fixed applications
- Performance - Ground plane independent design allows mounting in a variety of applications
- Simple Installation - Stud mounted design allows for installation on a gutter or mirror mount
- Flexible - PVC enclosed radiator allows for superior flexibility

Typical VSWR response (CD1150)

Tuned Bandwidth	Entire specified band @ <1.5:1 VSWR		70 MHz @ <2:1 VSWR
Tuning	Supplied pre-tuned, ready for installation		

## Mechanical

Model No.	CD1140	CD1150	CD1160
Whip Material	Brass elevated feed, radiator enclosed in flexible PVC tubing		
Whip Length mm	195 (including elevated feed section)		
Mounting	Threaded stud and nut assembly 16mm clearance hole required		
Cable and Connector	5.0m Cellfoam® cable. Please specify connector		

# GPS Antenna

1575.42 MHz

## GPS1 GPS1-BKT

GPS1-BKT

GPS1

The GPS1 is a high performance compact GPS antenna designed to accommodate automotive applications and a wide variety of OEM, system integrator and end user applications.

This 25mm patch antenna is coupled with a 28dBi gain active amplifier which operates from 2.5 VDC to 12 VDC with a low 11mA consumption (at 2.5 VDC).

The GPS1 comes enclosed in a UV stable, high impact, fully weatherised housing, with 5m of double screened low-loss RG174 (type) cable terminated with an MCX connector (other connectors available on request).

The GPS1-BKT is an optional mounting bracket kit which mates with the GPS1 antenna. This kit includes a black chrome plated stainless steel bracket and fittings. The bracket's 16mm hole allows mounting of a variety of RFI ground independent mobile antennas. The result is a neat multiband antenna installation.

## Electrical

Model	GPS1
Frequency MHz	1575.42

The CDM2400 series are a range of mobile antennas specifically designed for mobile WLAN applications. Utilising a fibreglass radome with a heavy duty stainless steel spring these antennas offer a robust and high performance solution, well suited to mining, warehousing, public transport and emergency services applications.

The CDM2400 series utilise a patented PCB based collinear design offering the ultimate in pattern stability. Their ground independent design makes them suitable for a variety of mounting positions including bullbar, gutter and roof rack.

- Robust construction
- Integrated heavy duty spring
- Outstanding performance

# UHF CBRS Mopole™

476-477 MHz

## CD33 Series

CD33

The CD33 Series Mopole™ antenna is specifically designed to be used in a variety of mounting positions such as vehicle mirror, gutter or roof bar mounts according to individual needs.

Mounted in such positions, the CD33 is the ideal substitute for an antenna which would normally need to be mounted in the centre of a metal roof to obtain maximum efficiency.

The CD33 Series antenna is an end-fed dipole (½ wave). A tuned circuit has been incorporated in the base and the radiating element enclosed in a flexible nylon radome. The end result is an attractive, yet tremendously rugged package suited for almost any application.

- **Workhorse** - A terrific antenna for agricultural and work vehicle applications where durability is critical
- **Versatile** - Ground plane independent design allows installation in almost any location
- **High Performance** - Exhibits 4 dB gain over ¼ wave whip mounted in the centre of a metal roof
- **Rugged**- Radiating element is enclosed in flexible UV resistant nylon tubing
- **Convenient** - Available in a number of kits with full instructions for fitting by inexperienced installers

Typical VSWR response

## Electrical

Model No.	CD33-71-73
Gain	4dB over a ¼ wave. See note (1)
Frequency MHz	476 - 477
Power W	20
Tuned Bandwidth	Entire specified band @ < 1.5:1 VSWR
Tuning	Supplied pre-tuned

## Mechanical

Model No.	CD33-71-73
Whip Material	UV resistant flexible nylon tubing
Whip Length mm	330
Mounting	Base mounts in 16mm hole
Cable and Connector	5.0m RG58C/U cable fitted. A variety of pre-packed kits including connectors and fittings are also available

(1) As the CD33 is a half wave dipole antenna, actual pattern tests show unity gain vs. a half wave dipole. In the field, however, the CD33 will deliver performance which is approximately 4dB better than a ¼ wave whip mounted in the centre of a metal roof, mainly because it exhibits a lower angle of radiation.

The CD63 Series Mopole™ antennas offer complete versatility in mounting options. Unlike conventional roof mount antennas, the CD63 Series antennas have true ground independence which allows mounting in a variety of positions including vehicle mirror, gutter or roof bar mounts.

This extraordinary performance is made possible by the use of an exclusive (and patented) high impedance matching circuit in the base coil. This allows the end feeding of the collinear whip section, a  $\frac{5}{8}$  over  $\frac{1}{2}$  wave radiator wound from a single piece of high resilience 17-7PH stainless steel.

- Available in two mounting options, removable MBC style (CD63-71-50) or threaded stud and nut (CD63-71-70)
- Excellent performance - Exhibits 6.0dB gain over a  $\frac{1}{4}$  wave whip mounted in the centre of a metal roof
- Flexible - Stainless steel whip returns to original shape after bending
- Rugged - The base coil is housed in a high impact thermoplastic moulding and is practically indestructible
- Stylish - Attractive black finish, complements vehicle styling

Typical VSWR response

## Electrical

Model No.	CD63-71-50	CD63-71-70
Gain	6dB over a $\frac{1}{4}$ wave. See note (1)	
Frequency MHz	476 - 477	
Power W	20	
Tuned Bandwidth	Entire specified band @ <1.5:1 VSWR	
Tuning	Supplied pre-tuned	

## Mechanical

Model No.	CD63-71-50	CD63-71-70	CD63-71-73
Whip Material	17-7PH Stainless steel		
Whip Length mm	800 (whip and coil only)		
Mounting	MBC base supplied to fit 16mm hole	16mm stud mount	
Cable and Connector	None supplied		5m RG58C/U cable

(1) Mopole™ antennas such as the CD63 have been shown to exhibit a 6dB improvement in received signal level in the field when compared to a  $\frac{1}{4}$  wave whip however in pattern tests exhibit only 1.5 to 2dB over a  $\frac{1}{4}$  wave (equivalent to 1.5-2dBi). This improvement in performance can be attributed to a lower radiation angle level of these ground independent antennas.

Australian Patent No. 596830

# Elevated Feed Mopole™

470-490 MHz

## CD900 Series

CD921-71-75

The CD900 Series are high performance elevated feed mobile antennas which can be used in virtually any mounting position. When gutter or roof bar mounted, high above a vehicle, CD900 series antennas deliver a full 6.5dB gain over a ¼ wave whip. When mounted in other positions, such as on a vehicle fender or bull bar, the elevated feed design places a large portion of the antenna above the vehicle cabin, providing good all round performance regardless of mounting position.

- Totally ground plane independent
- Elevated feed boosts radiating element above obstructions
- MSW25 "Phasemaster II™" whip section provides unsurpassed performance and strength
- Quality construction - Choke assembly is crafted from solid brass and available in both chrome and black finishes
- Supplied pre-terminated with FME connector and UHF adaptor
- Can be used with a variety of mounts. See accessories section for options.

Whip Material	Polyurethane over moulded 17-7PH black chrome plated whip section on bright chrome choke		Polyurethane over moulded 17-7PH black chrome plated whip section on black chrome choke	
Spring Options	No spring	SK954 spring included	No spring	SK953 spring included
Whip Length mm	850			
Mounting	Threaded stud and nut assembly mounts in either 13 or 16mm dia. hole			
Cable and Connector	5m Cellofoam™ with FME-101 terminated, UHF adapter supplied.			

(1) Mopole™ antennas such as the CD900 Series has been shown to exhibit a 6.5dB improvement in received signal level in the field when compared to a ¼ wave whip however in pattern tests exhibit only 1.5 to 2dB over a ¼ wave (equivalent to 1.5-2dB). This improvement in performance can be attributed to a lower radiation angle level of these ground independent antennas.

# UHF CBRS Collinear

The CD5000 is a high gain mobile CBRS antenna providing a genuine 5 dB gain and is ideally suited for use in fringe areas and country applications where performance is paramount.

This antenna is extremely robust in design with the patented PCB designed radiating element housed in a black or white (CD5000-W) fibreglass radome fitted to an integral heavy duty electro-polished stainless steel spring.

With a 13mm stud mount and ground plane independent design, this antenna may be installed onto a number of mounting brackets such as mirror, bull bar, gutter or fender mounts and are ideal for installations in commercial vehicles, four wheel drives and trucks. They can even be used as a base station antenna due to their ground plane independent design.

- 5 dB Gain ideal for fringe areas and country applications
- Robust design for heavy duty applications
- Available with GPS sub-assembly on request (see page 53)
- Available in white - CD5000-W
- Patented PCB based collinear design offering the ultimate in pattern and gain stability

## Electrical

Model No.	CD5000
Gain	5dB over a ¼ wave
Frequency MHz	476 - 477
Power W	25
Tuned Bandwidth	Entire specified band @ <1.5:1 VSWR
Tuning	Supplied pre-tuned

## Mechanical

Model No.	CD5000
Whip Length mm	900
Mounting	Threaded stud and nut assembly 13mm clearance hole required
Cable and Connector	5.0m 9006 supplied with FME-101 connector terminated and UHF adapter supplied

USA Patent: 6909403

# UHF CBRS Collinear

476-477 MHz

## CD6000 Series

CD6000

The CD6000 Series antenna is an ultra high performance antenna for use with 477 MHz UHF CB transceivers. The antenna delivers superior gain and will deliver exceptional range in fringe and country applications.

The radiating element is a series fed collinear enclosed in either a black or white fibreglass radome. The heavy duty stainless steel spring mounted at the base allows the antenna to flex and absorb vibrations.

The CD6000 is easy to install being fitted simply with a 12mm (M12) bolt. The antenna can be installed on a number of mounting brackets but we recommend use of a heavy duty bullbar mount for most applications. The CD6000 can be used on 4-wheel drives, trucks, agricultural machinery, boats or even as a base station antenna and will provide superior gain and performance in all applications.

- The ultimate in range and performance for UHF CB
- Built for extreme environments with stainless steel spring integrated for vibration absorption
- Retail ready - Packaged complete with cable and connector for hassle free installation
- Also available in white - CD6000-W

Typical VSWR response

## Electrical

Model No.	CD6000
Gain	6dB over a ¼ wave
Frequency MHz	476 - 477
Power W	20
Tuned Bandwidth	Entire specified band @ <1.5:1 VSWR
Tuning	Supplied pre-tuned

## Mechanical

Model No.	CD6000
Whip Material	Black fibreglass radome fitted with a 30cm aluminium mount tube locked to the base assembly   White fibreglass radome fitted with a 30cm aluminium mount tube locked to the base assembly
Whip Length mm	2000
Mounting	Base assembly is heavy duty electropolished stainless steel spring and collar fitted with 12mm aluminium bolt. Fixes to mounting bracket up to 12mm thick.
Cable and Connector	5.0m 9001 supplied to mate with UHF receptacle on base of antenna. UHF connector supplied for radio connection.

# 27 MHz Marine

The 27MHz marine antenna range includes three ground independent antennas designed specifically for the harsh marine environment. The ground independent design allows great mounting versatility in the marine environment.

These 27MHz marine unity gain antennas are housed within a flexible fibreglass radome with a tightly sealed enclosed element to provide protection in inherently corrosive marine applications.

The MDA Series deck mount antennas utilise the MAM1 marine mount which can be adjusted through 180° across both planes for great flexibility in mounting. The MDA-201 measures 1.9m tall and is ideal when mounting on a flybridge, above obstructions or on smaller vessels. The 3.1m MDA-301 antenna is designed to mount to the lower deck and provides the extra height needed to boost performance for long range communications.

The MMA-301 is a 3.4m antenna which mounts to a mast using two stainless steel U-bolts (not included).

- Performance - Ground independent design allows for mounting in virtually any location
- MAM1 Marine mount allows for adjustability in every direction
- Rugged - Designed specifically for the marine environment

Typical VSWR response (MDA-201)

## Electrical

Model No.	MDA-201	MDA-301	MMA-301
Gain	Unity over a ¼ wave		
Frequency MHz	27.7 - 28.0		
Power W	25		
Tuned Bandwidth	Entire specified band @ <2.0:1 VSWR		
Tuning	Supplied pre-tuned		

## Mechanical

Model No.	MDA-201	MDA-301	MMA-301
Whip Material	Flexible white fibreglass radome		
Whip Length mm	1900	3100	3400
Mounting	MAM1 marine mount (supplied)		2 x UB2 U-bolts (not included)
Cable and Connector	3.6m RG58 cable, no connector supplied		

# VHF Mast Mount Marine

156-162 MHz

**MME-101**  
**MME-331**

MME-101

These VHF marine antennas are designed specifically for the VHF international maritime bands and seaphone frequencies. They are ground independent mast mounting antennas which mount to a mast using customer chosen mounting hardware.

The antennas are housed within a fiberglass radome, with a tightly sealed radiating element to provide protection from the corrosive marine environment.

The MME-101 is a unity gain antenna measuring 1.5 m high and is ideal for mounting on a flybridge, above obstructions.

The MME-331 antenna is a 3 dB gain antenna which measures 2.9m in length. It is ideal in applications requiring high gain or in situations where extra height is needed.

- Unity or 3 dB gain versions
- Performance - ground independent design allows for mounting in virtually any location
- Rugged - designed specifically for the marine environment

## Electrical

Model No.	MME-101	MME-331
Gain	Unity over a ¼ wave	3dB over a ¼ wave
Frequency MHz	156 - 162	
Power W	25	
Tuned Bandwidth	Entire specified band @ < 1.8:1 VSWR	
Tuning	Supplied pre-tuned	

## Mechanical

Model No.	MME-101	MME-331
Whip Material	Flexible fiberglass radome	
Whip Length mm	1500	2900
Mounting	2 x UB2 U-bolts (not included)	
Cable and Connector	Short RG213 cable tail fitted with N-type connector (female)	

# VHF Marine Deck Mount

These VHF marine antennas are designed specifically for the VHF international maritime bands and seaphone frequencies. The ground independent design allows great mounting flexibility in the marine environment.

The antennas are housed within a fibreglass radome with the radiating element tightly sealed to provide protection from the corrosive marine environment.

The MDE Series deck mount antennas mount on an MAM1 marine mount which can be adjusted through 180° in both planes allowing great mounting flexibility. The MDE101 is a unity gain antenna measuring 1.3m high and is ideal for mounting on a flybridge, above obstructions or on smaller vessels.

The MDE331 antenna is a 3 dB gain antenna measuring 2.7m high. The MDE331 is ideal when mounting on the lower deck where it provides the extra height needed to elevate the radome section above flybridges and other obstructions. It is also useful in applications requiring a deck mounted high gain antenna.

- Unity or 3 dB gain versions
- Performance - Ground independent design allows for mounting in virtually any location
- MAM1 marine mount allows flexibility in mounting attitude
- Rugged - Designed specifically for the marine environment

156-162 MHz

Cable and Connector	3.6m RG58 cable. No connector supplied.	

# Cellular Marine Deck Mount

824-960 MHz

**MDD-203**  
**MDG-203**

The MDD and MDG Marine antennas are high gain omnidirectional antennas designed specifically for marine applications. The antennas do not require a ground plane and are supplied with a MAM1 marine antenna mount which allows the antenna to be mounted vertically regardless of the mounting surface which is used.

The high gain (3 dB) radiating element is enclosed in a white fibreglass radome. The radiating element has been placed near the top of the radome to ensure maximum range and to maintain omnidirectivity by keeping the antenna well above obstructions or occupants of the vessel.

To minimise connection and cable losses the MDD and MDG are supplied with 10.0 metres of 9006 low loss cable which is pre-terminated to ensure the integrity of this vital connection. The antenna is supplied complete with adapters to allow connection to almost any cellular phone car kit even by inexperienced installers.

The MDD and MDG offer superior performance, maximum range and the ultimate in reliability for marine applications.

- MAM1 Marine Mount allows for 180° adjustability
- Rugged design specifically for harsh marine environments
- Flexible construction from heavy duty fibreglass
- Retail ready packaging with pre-terminated feeder for use by inexperienced installers

hand portable antennas

# Hand Portable Antennas

## Typical Data for a 1/4 Wave Whip Antenna

RFI offer an extensive range of hand portable antennas for PMR, SMR and trunking applications. The majority of common connector options are catered to in a variety of different formats. The range of antennas is offered in an ideal form for workshop use with most models being tuneable in the field over an extended range of frequencies using the tuning chart provided. This results in reduced inventories and allows dealers to carry antennas "off the shelf" to be tuned to customer specified frequencies as required.

Each individual band is served by a separate series including:

### HPCB Series

A tightly compressed helical 1/4 wave antenna, shrink coated. Flexible only in the upper 200mm, L.O.A. approximately 400mm. The antennas are supplied pre-tuned for the 27 MHz citizen band, have a narrow bandwidth (approximately 200 KHz) and are not suited for fine tuning.

### HPM Series

A fully flexible heatshrink coated helical antenna. L.O.A. is approximately 400mm at its lowest frequency and the antenna can be tuned using the supplied tuning chart over the band 66-88 MHz. Tuned bandwidth is approximately 3% of centre frequency.

### HPH Series

A flexible helical antenna which is fully injection moulded for maximum durability. L.O.A. is approximately 250mm at its lowest frequency and the antenna can be tuned over the range 140-250 MHz using the tuning chart supplied. Tuned bandwidth is approximately 3%.

### HPHS Series

A flexible, highly compressed helical which is fully injection moulded for maximum durability. L.O.A. is approximately 200mm at the lowest frequency and the antenna can be tuned over the range 118-175 MHz using the tuning chart supplied. Tuned bandwidth is approximately 3%.

### HPU Series

These are full 1/4 wave antennas for maximum performance, fully injection moulded for maximum durability. L.O.A. is approximately 200mm at the lowest frequency and the antenna can be tuned over the range 380 - 1000 MHz using the supplied tuning chart. The antenna covers UHF, 800 MHz, and Tetra applications in a single antenna. Tuned bandwidth is approximately 7%.

### HPUS Series

These are flexible helically loaded 1/4 wave antennas which are fully injection moulded for maximum durability. L.O.A. is approximately 175mm and the antenna can be tuned over the range 260 - 800 MHz, covering Tetra and UHF applications. Tuned bandwidth is approximately 6%.

### CRD Series

These half wave dipole antennas are available only with BNC or TNC terminations and offer a true high performance UHF antenna in hand held applications. The dipole element is enclosed in a flexible PVC tubing and the antennas can be trimmed using the enclosed tuning chart over the specified band. Tuned bandwidth is approximately 2% of centre frequency.

All of the  **ANDREW<sup>®</sup>**  
cable you'll ever need  
is available at **RFI**

HELIAX<sup>®</sup> is the Andrew brand name that stands for the most complete, cost effective, high performance coaxial cable systems in the world. In land mobile, broadcast, cellular, HF, earth station, terrestrial microwave and many other applications, HELIAX<sup>®</sup> coaxial cable products are the industry standard of excellence. These outstanding cables are complemented by a range of compatible connectors, hangers, grounding systems and other installation accessories that form a complete RF transmission line system.

With our comprehensive stockholding and experienced sales team, RFI offers:

- **Complete Product range**
- **One Stop Shopping**
- **Fast Delivery**

## Mounting Options for all Mopole™ antennas

Part. No.	Illustration	Description
GM7		Fibreglass reinforced plastic adjustable vehicle gutter mount. Attaches to gutter using a philips screwdriver.
GM2		Heavy duty cast aluminium adjustable gutter mount. Attaches to vehicle gutter using allen key (provided) and includes buffer plate.
<b>TLM Series</b>		Trunk Lip Mount Series brackets made of stainless steel. (TLM-6 shown)
TLM-1		Heavy duty "L" shaped bracket for use with larger antennas such as CD93.
TLM-2		Heavy duty extra lip "Z" shaped bracket for use with larger antennas such as CD93.
TLM-3		Standard "L" shaped bracket
TLM-4		Standard extra lip "Z" bracket
TLM-5		Identical to TLM-3 except black
TLM-6		Identical to TLM-4 except black
TLM-7		Standard "Z" shaped bracket with compensation angle (for use on tightly raked trunk lids)
BK850		A black stainless steel bonnet or boot mount. Mounts directly to the bonnet or boot lid.
WM1		Slimline window mount allows ground independent antennas to be mounted on vehicles without gutters. Attaches using double sided tape and is angle adjustable with the use of an allen key.
MM2		Heavy duty mirror mount allows any mobile antenna to be mounted on a truck style mirror, roof rack or bull bar.
SK950 SK954 SK953		Heavy duty springs to suit CD90 Series antennas. SK950 - Parallel spring SK954 "Bellied" spring Both of stainless steel with plated-brass fittings SK953 black chrome equivalent to SK954
BBM-1		Black powder coated bull bar bracket for mounting mobile antennas onto vehicle bull bars. Comes complete with s/s hose clamp.
BBM-2		Polished stainless steel bull bar bracket for mounting mobile antennas onto vehicle bull bars. Comes complete with s/s hose clamp.
BBWM-1 BBWM-2		Polished wrap around stainless steel bull bar bracket with 6mm cable slot for ease of antenna mounting. BBWM-1 = 50mm BBWM-2 = 45mm

## Antenna Bases & Re-installation Kits

Part No.	Description	
MBC		Coaxial base providing an internal, permanent connection in a sealed unit. Easy to install and allows the entire antenna to be removed and replaced at will. Available with or without cable.
MBC-00-50F		MBC base with mini (RG174) lead. Allows feeder to be run through door jam or boot lid without crushing.
MB3		Magnetic style base, allows antennas to be transferred from car to car with ease. Complete with 5.0m of RG58 cable.
MK-850		Magnetic base for CD90 Series, CD1225 and CD1625 antennas. Rubber boot prevents magnet from scratching vehicle paint work. Cable exits via mounting turning.
MB9		VHF mobile base mounts either through the roof or on a bracket. Easy to terminate. 19mm hole required for blind hole mounting. Available with or without cable.
MB10		UHF mobile base mounts on a bracket or through the roof. A popular model measuring only 30mm diameter. 20mm hole required for blind hole mounting. Available with or without cable.
MB12		UHF mobile base mounts on a bracket or through the roof, measures 40mm in diameter. 20mm hole required for blind hole mounting. Available with or without cable.
MB14		Mobile base suitable for frequencies up to 2GHz. It delivers a precisely controlled termination resulting in a superb match. 19mm hole required for blind mounting. Only available with 5.0m of 8058 or 9001 cable pre-terminated.

Part No.	Description	
MSF1		Lightweight spring, fits any standard mobile antenna with 5/16" thread. Allows flexibility for low clearance such as car parks or overhanging trees.
BAF2		Black ball adjuster to swivel the antenna so the correct vertical angle can be gained when the antenna base is on a slope. Easy to adjust and tighten.
KAV385		Re-installation kit for glass mount II, III, IV antennas
KAV382		Re-installation kit for glass mount antennas
KG880		Re-installation kit for E-glass antennas
KG2000		Re-installation kit for ITG-2000
KG4000		Re-installation kit for ITG-4000
KG5000		Re-installation kit for ITG-5000 series.

# DC to DC Voltage Converters

## Unitek DC/DC Converters

SDC08

A complete line of high quality switch mode DC to DC converters in compact housings. These high efficiency converters are suitable for applications requiring a stable output and low energy consumption, such as radio and navigation equipment.

- The SDC 20 and SDC 30 can also be used as a 13.8Vdc battery charger enabling the charging of a 12V starter or accessory battery from a 24V system.
- The IDC-charger 12-24V can be used to charge a 24V battery from a 12V system, isolated. The output voltage of this model can be adjusted with a potentiometer.

## Non isolated Converters

Models	SDC05	SDC08	SDC12	SDC20	SDC30	STEP7	STEP10

# Batteryguard

The Unitek universal programmable batteryguard (BG) prevents excessive battery discharge and protects electric appliances against overvoltage.

Two models are available, 25A (BG 30) and 60A (BG 60). The mosfet switch is capable of carrying either 25A or 60A continuous load, and up to 40A or 80A transient load.

- Fully programmable with jumpers, the Batteryguard can be set to engage/disengage at several different voltages.
- Overvoltage protection - load disconnected when DC voltage exceeds 16V or 32V.
- Ignition proof - No relay but MOSFET switches, and therefore no sparks.
- Alarm output - The alarm output is activated if the battery voltage drops below the preset disconnect level for more than 15 seconds. Starting the engine or genset will therefore not activate the alarm. The alarm output is an open collector output to the negative (minus) rail, max. current 500mA. The alarm is typically used to activate a buzzer and/or lamp.
- Load disconnect - 1 minute after the alarm has been activated the load will be disconnected, but if the battery voltage increases to the connect threshold within this minute (after the engine/genset has been started for example) the load will not be disconnected.

Models	BG30	BG60
Maximum continuous load current	25A	60A
Operating voltage range	6 - 35V	
Current consumption	<7mA	
Alarm output delay	15 seconds	
Load disconnect delay	1 minute	
Casework	Anodised aluminium, black

# DC to DC Voltage Converters

## 24V DC to 12V DC Converters

VC2412-3

RFI's VC Series 24V-12V DC converters have been designed specifically for mobile applications in the communications industry. The VC Series converters incorporate excellent protection features, including overload, short circuit and voltage surge protection.

All units employ a linear output design with over-voltage protection. This is provided in conjunction with a high power relay which is triggered in milliseconds to interrupt supply. The converters utilise an advanced ridged pattern heatsink extrusion, allowing the units to operate at lower temperatures than previously designed converters.

- **Over-Voltage Protection** - Converters utilise a crowbar protective device to shut down the unit in 35 milliseconds with a high power relay which resets when power supply is interrupted. This eliminates the need to open the converter to replace blown internal fuses
- **Overload Safeguard** - Units automatically foldback the output to less than one half of the peak output rating and return to normal operation when the overload is corrected
- **Cooler Operation** - Heatsink extrusions are based on a ridged pattern which substantially increases heat dissipation capacity and improves reliability
- **Clear Communications** - Low ripple, low noise circuitry to minimise radio interference
- **Linear Output Stage** - Unit uses 2N3055 transistors for reliability
- **Designed and manufactured in Australia**

**HIGH POWER RELAY MEANS  
NO MORE BLOWN FUSES**

Models	VC2412-3	VC2412-6	VC2412-10	VC2412-15	VC2412-20

# Base Station Power Supply & Battery Charger

The SME240 series power supplies have been designed specifically for telecommunications applications demanding high reliability, low noise, fully automatic battery backup, battery protection and full protection of the output. Ideal in remote sites, they can be used completely unattended. With a host of protection features, the units are safe and reliable in any application.

The SME240-12-10 & SME 240-24-5 power supplies provide a power output of 140 watts at 13.6 and 27.2V respectively. The nominal input mains may be 200V to 240V and 50Hz or 60Hz.

- Low noise output, ideal for telecommunications applications
- Lighter and more compact than comparable linear power supplies
- Battery overdischarge protection with automatic reset
- Mains failure and battery reverse polarity alarm output
- Convenient plug in output connector
- 5 year warranty
- Local technical support
- C-Tick approved (EMI/EMC)

Model No.	SME240-12-10	SME240-12-5
Input Voltage <i>V<sub>ac</sub></i> (Hz)	200-240	
Output Voltage <i>V adjustable</i>	12.0 - 14.0	24.0 - 28.0
Output Ripple Voltage <i>mVp-p</i>	<20	<20
Output Current <i>A</i>	10.0	5.0
Over Voltage Protection <i>V</i>	<16.0	<32.0
Load Regulation 1	±2% from set point taking into account all of line and load regulation and temperature coefficient when load powered by power supply	
Load Regulation 2	+0-2% of battery terminal voltage when load powered by battery	
Alarm Relay Contact Rating	Normally closed contact 60V @ 0.2A	
Operating Environment	0-50°C Ambient. Convection cooled	
Efficiency	90% Typical	
Weight <i>kg</i>	<1.0	
Compliance	AS3260, AS3548, ACA, EMC compliance, C-Tick Mark	

# RFI DISTRIBUTED LINES

For more than 25 years RFI has served the needs of the wireless communications market. RFI has grown to be not only a world class manufacturer of antennas but also a leading distributor of over 6000 wireless products from around the globe.

We have formed alliances with “best of breed” wireless technology companies around the world. So, whatever your network: land mobile, cellular, paging, telemetry, telematics, WLAN, we are able to provide components from antenna port to air interface.

In renewable energy we are fast gaining the reputation as the industry’s benchmark distributor. Extensive stockholdings, competitive pricing, comprehensive range and an extensive dealer network all contribute to this reputation for service.

- ▷ Extensive product range
- ▷ Competitive pricing
- ▷ Fast delivery
- ▷ Technical advice

UHF Series

Model. No.	Description	Cable Type	Centre Conductor	Crimp Set* or Tool
<b>Cable Plugs</b>				
UHF-21	Clamp - Silver plated	RG58, 9001, 9006	Solder	-
UHF-44	Crimp - Nickel	RG58, 9001, 9006	Crimp, captive	A
UHF-66	Clamp - Right-angle plug	RG58	Solder, captive	-
UHF-104	Twist on nickel	RG58, 9001, 9006	Crimp, captive	A
UHF-119	Crimp - Nickel	RG58, 9001, 9006	Crimp, captive	A
UHF-204	Screw thread nickel	RG58, 9001, 9006	Solder, captive	-
UHF-45	Crimp - Nickel	RG59	Crimp, captive	B
UHF-46	Crimp - Nickel	RG213	Crimp, captive	C
UHF-27	Twist on - Nickel	RG213, RG214	Solder	-
UHF-04	Clamp - Silver plated	RG213, RG214	Solder, captive	-
MP10FB	Solder - Nickel plated	9005, 10DFB	Solder	-
44ASP	Solder, Tab flare	FSJ4-50	Solder	-
L44P	Solder, Self-Flare	LDF4-50, RXL4-50	Solder	-

\* See Pages 165-167 for Crimp Tools Matrix

UHF connectors are non-constant impedance connectors suited for use at frequencies not exceeding 600 MHz. However, to ensure maximum performance at higher frequencies all UHF Series male connectors feature a high strength PTFE dielectric with the exception of the "CB style" connectors UHF-104, UHF-204 and UHF-27.

## Cable Preparation Tools

Part No.	Description	Illustration
BR-CPT-400	<p><b>Cable prep tool</b> Hand tool for fast and easy preparation of BR-400 cable. Strips jacket and cuts through outer shield and dielectric making cable ready for connector attachment. Incorporates deburring blade to prepare centre conductor.</p>	 <p>BR-CPT-400</p>
CST-399	<p><b>Coaxial cable stripping tool - Corex 2</b> 3 blade cutter. Adjustable blade height, reversible blade cartridge. Swedish precision tool to suit:</p> <ul style="list-style-type: none"> <li>• RG58</li> <li>• RG59</li> <li>• RG62</li> <li>• RG174</li> <li>• RG188</li> <li>• RG316</li> <li>• RG6</li> <li>• RG195</li> <li>• RG180</li> </ul>	 <p>CST-399</p>
CST-213	<p><b>Coaxial cable stripping tool - Maxi Corex</b> 3 blade cutter. Adjustable blade height, reversible blade cartridge. Packaged in robust plastic case and comes complete with knife and adjustment tool. Swedish precision tool to suit:</p> <ul style="list-style-type: none"> <li>• RG213</li> <li>• RG214</li> <li>• RG6</li> <li>• Twinax &amp; Ethernet cables</li> </ul>	 <p>CST-213</p>
EASIAx®	<p><b>Cable prep tool</b> Hand tool for fast precision cuts in Heliax® cables. Available for:</p> <ul style="list-style-type: none"> <li>• FSJ1 and 4 (MCPT-1412)</li> <li>• FSJ2 and 4 (MCPT-3812)</li> <li>• LDF4 and RXL4 (MCPT-L4)</li> <li>• LDF5 and RXL5 (MCPT-78)</li> </ul>	 <p>MCPT-L4</p>
EASIAx® Plus	<p><b>Automated cable prep tool</b> Fit to a standard power or battery drill for fast, reliable cable preparation in seconds. Removes jacket outer conductor and foam, then cuts back and chamfers the inner conductor for correct connector attachment. Available for cables from LDF1-50 through to LDF7-50.</p> <ul style="list-style-type: none"> <li>• LDF1-50 (CPTL1)</li> <li>• LDF2-50 (CPT-E2L2N)</li> <li>• LDF4-50 (CPT-L4ARC1)</li> <li>• LDF5-50 (CPTL5A)</li> <li>• LDF6-50 (CPTL6)</li> <li>• LDF7-50 (CPTL7)</li> </ul>	 <p>CPT-L4ARC1</p>

## Cutting and Stripping Tools and Accessories

Part No.	Description	Illustration
ACT-1	Ratchet crimp tool for insulated terminals. Incorporates 3 crimping positions for pre-insulated terminals (red, blue and yellow terminals)	 ACT-1
CST-001	Cable stripping tool for 32 to 8 AWG wires. Adjustable length stop, integrated cable cutter, strips single or twin wires. Swedish precision tool.	 CST-001

## Crimp Tool Dimensions

Crimp Set	Hex Dimensions (Outer Conductor)	Hex/Square Dimensions (Centre Conductor)	Typical Cable Sizes Using Crimp Set
A	5.41	1.69	RG58, 9001, 9006, RG142, RG223, RG400
B	6.48	1.69	RG59, RG62
C	10.54	2.54	RG213
D	10.9	2.54	RG214, RG63
E	3.25	0.72	RG174, RG63, RG179

## Cable Clamps

Item	Part No.	Description
KwikClamp	<b>Ideal for installing multiple runs (1, 2 or 3) on towers where space is limited. Self clamping hangers eliminate the need for drilling or adapters.</b>	
	L4CLAMP-RDN-1	Multi-run hanger, self clamp (1 run) suits LDF4-50
	L4CLAMP-RDN-2	Multi-run hanger, self clamp (2 runs) suits LDF4-50
	L5CLAMP-RDN-1	Multi-run hanger, self clamp (1 run) suits LDF5-50
	L5CLAMP-RDN-2	Multi-run hanger, self clamp (2 runs) suits LDF5-50
	L6CLAMP-RDN-1	Multi-run hanger, self clamp (1 run) suits LDF6-50
	L6CLAMP-RDN-2	Multi-run hanger, self clamp (2 runs) suits LDF6-50
	L7CLAMP-RDN-1	Multi-run hanger, self clamp (1 run) suits LDF7-50
L7CLAMP-RDN-2	Multi-run hanger, self clamp (2 runs) suits LDF7-50	
Angle Adapter Kits	<b>Ideal for mounting standard hangers and Click-On hangers to angle tower members up to 22mm thick</b>	
	31768A	Suits all sizes of hangers. (pack of 10)
	UA-3	Suits snap in hangers. (pack of 10)
Galvanised Angle Adapter Kits	247763	Galvanised and non-marring. For mounting 1/2" to 2 1/4" cable to angle tower members up to 19mm thick
Compact Angle Adapter Kits	<b>Compact, lightweight angle adapter suitable for use with single runs up to 2- 1/4" in diameter.</b>	
	243684-M	Suits all sizes of cables, including FSJ and LDF series (pack of 10)
Cold Shrink Weatherproofing	<b>Simply slips over the connection and compresses around the interface using a pull tab applicator</b>	
	241474-4	Suits 1/2" to 1/2" N connectors
	241474-5	Suits 7/8" to 7/8" N connectors
Feed Thru Glands	FTN-4	Nylon, suits 1/2" cable including LDF4-50
	FTB-4	Brass, suits 1/2" cable including LDF4-50
	40656A-3	Neoprene gasket, suits 1/2" cable including LDF4-50
	FTN-5	Nylon, suits 7/8" cable including LDF5-50
	FTB-5	Brass, suits 7/8" cable including LDF5-50
	40656A-1	Neoprene gasket, suits 7/8" cable including LDF5-50
	40656A-5	Neoprene gasket, suits 1 1/4" cable including LDF6-50
	40656A-2	Neoprene gasket, suits 1 5/8" cable including LDF7-50
Hoisting Grip	43094	Suits LDF4-50 cable
	19256B	Suits LDF5-50 cable
	29961	Suits LDF5-60 cable
	24312A	Suits LDF7-50 cable

# Coaxial Cable Hardware

## Grounding and Hanger Kits

Item	Part No.	Description
Universal Grounding Kit	UG1215-06B1	Universal grounding kit for 1/2" - 1 5/8" cable
Sure Ground™ Grounding Kits	SGL4-06B2	SureGround™ grounding kit with standard weatherproofing butyl rubber sealing tape, 2 hole lug for 1/2" cable - LDF4-50
	SGL5-06B2	SureGround™ grounding kit with standard weatherproofing butyl rubber sealing tape, 2 hole lug for 7/8" cable - LDF5-50
	SGPL5-06B2	SureGround™ Plus grounding kit with weatherproofing rubber boot , 2 hole lug for 7/8" cable - LDF5-50
	SGL6-06B2	SureGround™ grounding kit with standard weatherproofing butyl rubber sealing tape, 2 hole lug for 1 1/4" cable - LDF6-50
	SGL7-06B2	SureGround™ grounding kit with standard weatherproofing butyl rubber sealing tape, 2 hole lug for 1 5/8" cable - LDF7-50
	SGPL7-06B2	SureGround™ Plus grounding kit with weatherproofing rubber boot, 2 hole lug for 1 5/8" cable - LDF7-50
	Hanger Kits	43211A
42396A-5		Standard Hanger Kit for 7/8" cable including, LDF5-50 (pack of 10)
42396A-1		Standard Hanger Kit for 1 1/4" cable including, LDF6-50 (pack of 10)
42396A-2		Standard Hanger Kit for 1 5/8" cable including, LDF7-50 (pack of 10)
Click-On Hangers	<b>Stackable Click-on hangers install in minutes and provide perfect fit, especially in confined spaces</b>	
	L4CLICK	Click-On hanger kit for 1/2" cable, including LDF4-50 (pack of 10)
	L5CLICK	Click-On hanger kit for 7/8" cable, including LDF5-50 (pack of 10)
	L6CLICK	Click-On hanger kit for 1 1/4" cable, including LDF6-50 (pack of 10)
	L7CLICK	Click-On hanger kit for 1 5/8" cable, including LDF7-50 (pack of 10)
Snap-In Hangers	<b>Stackable Click-on hangers install in minutes and provide perfect fit, especially in confined spaces</b>	
	SSH-12	Snap-In hanger kit for 1/2" cable LDF4-50 (pack of 10)
	SSH-78	Snap-In hanger kit for 7/8" cable LDF5-50 (pack of 10)
	SSH-114	Snap-In hanger kit for 1 1/4" cable LDF6-50 (pack of 10)
	SSH-158	Snap-In hanger kit for 1 5/8" cable LDF7-50 (pack of 10)

# Mounting Hardware

## Antenna Clamps

### UNV Series

UNV

Lightweight right angle galvanised clamp. See the table below for mounting applications.

UNV2

Lightweight right angle stainless steel clamp. See the table below for mounting applications.

### FP Series

FP1

The Flat Plate Series are lightweight galvanised clamps with stainless steel U-bolts for mounting in 90° or in-line applications. See the table below for mounting applications.

### UB Series

UB1

The UB1 antenna clamps are simple U-Bolt assemblies with “teeth”, around the inside of locating plates to prevent the antenna from slipping or shifting once mounted. Two separate clamps illustrated. See the table below for suggested mounting applications.

Stainless steel U-Bolt assemblies also available: UB2

CLAMPS	UB1	UB2	UNV	UNV2	FP-1	FP-2
Weight per clamp kg	0.21	0.19	0.41	0.48	1.5	1.5
Body Finish	Zinc plated	Stainless Steel	Galvanised	Stainless Steel	Galvanised	Galvanised
Fastener Finish	Zinc plated	Stainless Steel	Galvanised	Stainless Steel	Stainless Steel	Stainless Steel
Min. boom size mm	25	25	20	20	25	Min. sq boom size 19 Min. boom size 30
Max. boom size mm	52	52	52	52	50	50
Application	In-line mounting small collinear and ground plane antennas		Mount small antennas in 90° arrangement		Right angle mounting of antenna or tube	

### UCR Series

UCR1

The UCR1 is a heavy duty antenna clamp with a welded centre piece. All parts are hot dipped galvanised. See the table below for suggested mounting applications.

UCR2

The UCR2 is a nested galvanised clamp set which is configured to make a heavy duty, right angle clamp.

### MUE Series

MUE1

Straddle clamps, also referred to as “Mueller” clamps are hot dipped galvanised clamps suited for large tower angles. See the table below for suggested mounting applications.

### UC1

UC1

The UC1 is a heavy duty antenna clamp designed to mount larger antennas. The clamp is constructed of 6mm stamped galvanised steel plates, nuts, bolts and locking washers and allow for a high degree of adjustment during mounting. See the table below for suggested mounting applications.

CLAMP	UC1	MUE1	MUE2	UCR1	UCR1-120	UCR2
Weight per clamp kg	1.9	2.3	3.0	1.9	2.0	3.8
Body Finish	Galvanised	Galvanised		Galvanised	Galvanised	Galvanised
Fastener Finish	Galvanised	Galvanised		Galvanised	Galvanised	Galvanised
Min. boom size mm	20 both planes	50	50	20 both planes	20 both planes	20 both planes
Max. boom size mm	75 both planes	50	50	52 both planes	75 both planes	75 both planes
Min. angle size mm	Not applicable	40	70	Not applicable		
Min. angle size mm		75	200			
Application	In-line mounting of two tubular section. Mounts in 90° line	Designed to mount antennas and antenna structures onto a steel angle support tower		90° mounting with 75mm bolts	90° mounting with 120mm bolts for larger boom antennas	Heavy duty applications. Two members at 90°

# Mounting Hardware

## Mounts and Brackets

### WF Series Wall Fitting

A stand off mount, used in pairs to stand masting off a wall. Features four hole mounting and hot dip galvanised finish.

**WF12** - 30cm  
**WF36** - 90cm

### HS Series Hockey Stick Mount

An L-shaped fascia bracket with mounting tube used to mount small yagis or dipoles. Allows the vertical mast to clear guttering. Features four hole mounting and hot dip galvanised finish

**HS48** - 120cm  
**HS63** - 160cm  
**HS72** - 180cm

### DRL Series "Duralium" Scaffold Mount

Scaffold Duralium tubing used as a stand off mast or as heavy duty outriggers on towers or guyed masts in light weight applications. Also used to mount SMD antennas when creating phased arrays.

**DRL3**: 3m x 49mm  
**DRL6**: 6m x 49mm  
**DRL63-3**: 3m x 4mm\*

\*(DRL3 or DRL6 will telescope internally in this tubing)

### Roof or Ground - Satellite Dish Mounts

Roof or ground mount for mounting of microwave to satellite antennas. Hot dipped galvanised.

**R9720**  
60mm OD x 1100mm  
or  
**R9725**  
89mm OD x 1100mm

### MST4.5 Steel Mast

A light duty steel mast used in conjunction with WF series mounts for stand off mounts can also be used to make light weight outriggers on towers or guyed masts.

**MST4.5**  
One size available -  
4.5m x 38mm

### Tower or Wall - Satellite Dish Mounts

Tower or wall mounts for mounting of microwave to satellite antennas. Hot dipped galvanised. 102mm OD

**R7500** - Round tower mount  
**R9721** - Angle tower mount

### SCF6 Scaffold Steel Mast

A heavy duty steel tube used as a stand off mast or as heavy duty outriggers on towers or guyed masts.

**SCF6**  
One size available -  
6m x 48mm

### R9731 Fascia Mount

**R9731**  
Heavy duty stand off mount

## Mounting Accessories

Part No.	Description		
R1002	<b>Wood Eye Screw</b> 125mm x 3/8"		
R1003	<b>Eye Bolt</b> 25mm x 3/8"		
R1004	<b>Guy Anchor Plate</b> 270mm x 25mm x 25mm		
R1005	<b>Hook &amp; Turnbuckle</b> 5/6" dia.		
R1007	<b>'D' Shackle</b> 5/16" dia. Used as an interface between guy points and turnbuckles. Hot dip galvanised finish		
R1008	<b>Guy Cleat</b> 40mm x 125mm x 35mm		
R1009	<b>MST-4.5 Clamp Assembly Kit</b> Suits 38mm masting		
R1010	<b>Stay Bar Collar</b> Used with Hocky Sticks or short masts to provide attachment points for Stay Bars up to 38mm dia.		
R1014	<b>Stay Bar Kit</b> Used to stabilise HS Series mount or short masts. Screws down to roof surface		
R1017	<b>Wire Rope Grip</b> 4mm

## Mounting Accessories

Part No.	Description		
R1021	<b>Wood Screw - 1 1/2"</b> 3/8" ww		
R2001	<b>Galvanised Steel Guy Wire</b> 180m 7 x 0.90mm G380 strand		
		R1021	R2001

### Conduit Cable Protection

CPB Style - Nominal bore stainless steel braid tube. 10,14, 16, 21, 29 & 45mm dia. 1 metre lengths.

Part No.	Description	
R3001	<b>Stramit Roof Mount</b> Specially designed mount to fit Stramit or Cliplock roof profiles with no penetrating holes. The cleats clamp to the roof profiles with pinch bolts. Will support masts up to 2.4m tall for yagis or small dipoles.	
R3002	<b>Tile Roof Mount</b> Distributes the weight of a guyed mast on a tile roof evenly over the ridge tile. Accepts up to 55mm tube and suits up to 50' Telo mast.	
R3003	<b>Iron Roof Mount</b> Shaped to fit the profile of standard steel roof ridge capping, can be located with roofing screws. Accepts up to 55mm tube and suits up to a 50' Telo mast.	
23 Tape	<b>Self-Amalgamating Tape</b> Scotch brand self fusing water proof tape can be stretched up to twice its original length to form a continuous water proof seal on connector joins.	
INS-BK	<b>Insulation Tape</b> Black insulation tape used to over wrap Scotch 23 tape. Also used to secure cables to masting.	

# Mounting Hardware

Typical Installation: Guyed Mast

**OR USE**

- R3001** Stramit Roof Mount
- R3002** Tile Roof Mount
- R3003** Iron Roof Mount
