

Functional Description

The 5853AP is a battery powered portable transmitter and is part of a wireless alarm system. It is used in conjunction with a receiver (5881AP) as a glass break sensor to indicate a glass break event to the alarm system. These messages are transmitted at 315Mhz +/-82Khz using on-off keyed AM modulation. The 5853AP sends a regular supervision or check-in message, no more often than once per hour. It also sends messages initiated by the condition of the loop (open or closed).
