

TCB COVER LETTER

Hi Denis,

We made the following change to the output tuning to improve ESD (static) protection:

We removed C14 (a 1pF cap) and replaced it with a 39 nHy inductor.

We also removed L2 (100 nHy) and C17 went from 22pF to 1.8pF.

Any questions please give me a call: (516) 816-0847 is my cell 24 / 7.

Regards,

Greg Barbato
