Re: Confidentiality request for submittal information regarding FCC ID number CJR-SDRRK02

To Whom It May Concern:

MPH Industries, Inc. requests that the following information be withheld from public disclosure until 45 days after the Grant of Equipment Authorization in accordance with the Commission's public notice DA-04-1705.

Short term confidential files

External Photographs: External Photos.pdf

Internal Photographs: Internal Photos.pdf

User Manual: 991075 FCC Only.pdf

Test Set-Up Photos: MPH.Test Setup.pdf

MPH Industries, Inc. requests that the following materials be permanently withheld from public disclosure, in accordance with the FCC's Public Notice DA 04-1705 and 47 CFR 0.459, since these items are considered confidential trade secrets and technical data which would otherwise be guarded from competitors:

Permanent Confidential files

Block Diagram: Antenna & Ranger Display and Counting Unit block diagram and Specifications.pdf

Operational Description: Antenna & Ranger Display and Counting Unit block diagram and Specifications.pdf

Parts List: Parts Lists.pdf

Schematics: Schematics.pdf

The justification for the permanently confidential items is as follows:

1. Identification of the specific information for which confidential treatment is sought:

The materials contained in the operational description, block diagram, parts lists, tune up procedures, and schematics, which are separated, from the non-confidential exhibits of the application, are those for which permanent confidentiality is sought.

2. Identification of the Commission proceeding in which the information was submitted or a description of the circumstances giving rise to the submission:

The proceeding is that involving the application for equipment authorization (certification) under FCC ID No. CJR-SDRRK02

3. Explanation of the degree to which the information is commercial or financial, or contains a trade secret or is privileged:

This material includes a detailed theory of operation, circuit diagrams, and schematic. Such information could allow a skilled competitor to duplicate the equipment. Therefore, this material is treated as highly confidential business information.

4. Explanation of the degree to which the information concerns a service that is subject to competition:

The material for which confidentiality is sought is employed in the design and manufacture of this transmitting equipment. MPH has several competitors in this market, and this material would give them a competitive advantage that they could not achieve without the information.

5. Explanation of how disclosure of the information could result in substantial competitive harm:

Disclosure would, in effect, give away the fruits of the labors of MPH Industries, Inc.'s engineering personnel, who have designed the equipment and the manufacturing process. Disclosure would also offer competitors additional unwarranted insight into the state of the product development, thereby allowing competitors an advantage, not available otherwise.

6. Identification of any measures taken by the submitting party to prevent unauthorized disclosure:

The information for which confidential treatment is sought is kept confidential by MPH Industries, Inc. and not made available to third parties except pursuant to non-disclosure agreements.

7. Identification of whether the information is available to the public and the extent of any previous disclosure of the information to third parties:

The information is not available to the public, nor has it been disclosed publicly. While the general theory of operation of radar equipment is generally known, the specific implementation and inventions by MPH Industries, Inc. for this product are very novel. The information will continue to be closely guarded by MPH Industries, Inc.

8. Justification of the period during which the submitting party asserts that the material should not be available for public disclosure:

This material should not be disclosed for at least 25 years. While improvements in design are made relatively frequently, disclosure of the design information would lead to insights into both design and manufacturing techniques that could have an adverse competitive effect for many years to come. This equipment is designed for commercial, industrial, and governmental applications. As such, unlike most consumer equipment, this equipment could be used for more than a decade in some cases. As such, it is important that the design not be made available to unauthorized persons who might attempt to use knowledge of the design to compromise the applications for which the equipment will be employed.

Should you require any further information, please contact the undersigned. Thank you for your consideration in this matter.

Sincerely,

A handwritten signature in dark ink, appearing to read "Ken Willis", written in a cursive style.

Kevin Willis
