This EUT is two pulse radio-frequency output.

Spurious emission (Radiated) test was mode (21) that selected in the mode that became the worst result by Pre check.

Spurious emission (Conducted) test were mode (7),(13),(21) that selected in the mode that became the worst result by Pre check.

* The frequency stability test was used at minimum measurement time mode (Because EUT cannot set to no modulation.):
mode P: Pulse range table No.7 (7) / mode Q: Pulse range table No.5 (13)

Power of the EUT was set by the software as follows;

Power Setting: 270 W

Software: CDC-1469_402_Appli.bin Version: 402

This setting of software is the worst case.

Any conditions under the normal use do not exceed the condition of setting.

In addition, end users cannot change the settings of the output power of the product.

Justification: The system was configured in typical fashion (as a customer would normally use it) for testing.

4.2 Configuration and Peripherals

SECTION 9: Field Strength of Spurious Emission

Test Procedure : FCC part 2 section 2.1053, TIA-603-E section 2.2.12

EUT was placed on a polystyrene platform of nominal size, 1.5 m by 1.0 m, raised 0.8 m above the conducting ground plane.

The Radiated Electric Field Strength intensity has been measured on a semi-anechoic chamber with a ground plane and at a distance of 3 m(below 18GHz) / 1 m(above 18 GHz) (Refer to Figure 1). Measurements were performed with quasi-peak, peak and average detector. The measuring antenna height was varied between 1 and 4 m and EUT was rotated a full revolution in order to obtain the maximum value of the electric field intensity. The measurements were performed for both vertical and horizontal antenna polarization.

The radiated emission measurements were made with the following detection of the test receiver.

Frequency	Below 1 GHz	Above 1 GHz
Instrument used	Spectrum Analyzer	Spectrum Analyzer
IF Bandwidth	Peak: RBW: 10 kHz/VBW: 300 kHz	Peak: RBW: 1 MHz/VBW: 3 MHz

Transmitter Spurious Limit (General emissions): refer to FCC part 15 subpart C section 15.209
Transmitter Spurious Limit (Harmonics emissions): Carrier Level - (43 + 10 x log (Average power [W] = Peak power x Duty))

The Result is converted from electric field strength in dBuV/m to EIRP in Watts using the following formula

$$F [V/m] = 10^{((E [dBuV/m] - 120) / 20)}$$
$$P = ((F \times d [m])^2) / (30 \times g)$$

E = measurement electric field strength, in dBuV/m
F = measurement electric field strength. in V/m
P = EIRP, in dBm
d = measurement distance, in meters = 3 [m] or 1 [m]
g = numeric antenna gain (=1)

*Hyphens for Last Calibration Date, Calibration Due Date and Cal Int (month) are instruments that Calibration is not required (e.g. software), or instruments checked in advance before use.

The expiration date of the calibration is the end of the expired month.

All equipment is calibrated with valid calibrations. Each measurement data is traceable to the national or international standards.

As for some calibrations performed after the tested dates, those test equipment have been controlled by means of an unbroken chains of calibrations.
