To whom it may concern,

The Williams Sound, LLC FM T55 transmitter is an FM transmitter, operating on 17 selectable channels in the 72.1 to 75.9 MHz band. We are seeking original certification for this product under FCC part 15.237 in the United States. Our FCC ID number for this equipment is CNMFMT55.

This product will be marketed under two model numbers, FM T55 and FM T55D.

The FM T55 base product contains selectable analog audio inputs (e.g. microphone, line in, etc.) as well as an interface module that provides a digital communication interface for Ethernet connection, used as both a system control interface and a digital audio input signal path option.

The single operational difference between the two models is that the FM T55D contains an additional audio input module that plugs into the motherboard internally, and which provides a second digital audio input signal (referred to as a "DANTE" interface) from an external source.

We are seeking acceptance of our compliance in order to market our equipment in Canada. Additional documentation will be provided to demonstrate appropriate compliance to the aforementioned regulations.

Sincerely,

A handwritten signature in blue ink, appearing to read "Kelly Williams", is written over a horizontal line.

Kelly Williams
VP of Engineering
Williams Sound, LLC
A division of Williams AV
