FCC 15.237:2016

72-76 MHz Transmitter

Report # WILM0013.2

NVLAP Lab Code: 200881-0

This report must not be used to claim product certification, approval, or endorsement by NVLAP, NIST, or any agency of the federal government of the United States of America.

CERTIFICATE OF TEST

Last Date of Test: June 02, 2016
Williams Sound, LLC
Model: T45NET-D

Radio Equipment Testing

Standards

Specification	Method
FCC 15.207:2016	ANSI C63.10:2013
FCC 15.237:2016	

Results

Method Clause	Test Description	Applied	Results	Comments
6.2	Occupied Bandwidth	Yes	Pass	
6.2	AC - Powerline Conducted Emissions	Yes	Pass	
6.5, 6.6	Field Strength of Harmonics and Spurious Radiated Emissions	Yes	Pass	
6.6	Field Strength of Fundamental	Yes	Pass	

Deviations From Test Standards

None

Approved By:

Tim O'Shea, Operations Manager

Product compliance is the responsibility of the client; therefore, the tests and equipment modes of operation represented in this report were agreed upon by the client, prior to testing. The results of this test pertain only to the sample(s) tested. The specific description is noted in each of the individual sections of the test report supporting this certificate of test. This report reflects only those tests from the referenced standards shown in the certificate of test. It does not include inspection or verification of labels, identification, marking or user information.

REVISION HISTORY

Revision Number		Description	Date	Page Number
00		None		

ACCREDITATIONS AND AUTHORIZATIONS

United States

FCC - Designated by the FCC as a Telecommunications Certification Body (TCB). Certification chambers, Open Area Test Sites, and conducted measurement facilities are listed with the FCC.

A2LA - Accredited by A2LA to ISO / IEC 17065 as a product certifier. This allows Northwest EMC to certify transmitters to FCC and IC specifications.

NVLAP - Each laboratory is accredited by NVLAP to ISO 17025

Canada

IC - Recognized by Industry Canada as a Certification Body (CB). Certification chambers and Open Area Test Sites are filed with IC.

European Union

European Commission – Validated by the European Commission as a Notified Body under the R&TTE Directive.

Australia/New Zealand

ACMA - Recognized by ACMA as a CAB for the acceptance of test data.

Korea

MSIP / RRA - Recognized by KCC's RRA as a CAB for the acceptance of test data.

Japan

VCCI - Associate Member of the VCCI. Conducted and radiated measurement facilities are registered.

Taiwan

BSMI – Recognized by BSMI as a CAB for the acceptance of test data.

NCC - Recognized by NCC as a CAB for the acceptance of test data.

Singapore

IDA – Recognized by IDA as a CAB for the acceptance of test data.

Israel

MOC – Recognized by MOC as a CAB for the acceptance of test data.

Hong Kong

OFCA – Recognized by OFCA as a CAB for the acceptance of test data.

Vietnam

MIC – Recognized by MIC as a CAB for the acceptance of test data.

SCOPE

For details on the Scopes of our Accreditations, please visit:

<http://gsi.nist.gov/global/docs/cabs/designations.html>

MEASUREMENT UNCERTAINTY

Measurement Uncertainty

When a measurement is made, the result will be different from the true or theoretically correct value. The difference is the result of tolerances in the measurement system that cannot be completely eliminated. To the extent that technology allows us, it has been our aim to minimize this error. Measurement uncertainty is a statistical expression of measurement error qualified by a probability distribution.

A measurement uncertainty estimation has been performed for each test per our internal quality document WP 342. The estimation is used to compare the measured result with its "true" or theoretically correct value. The expanded measurement uncertainty (K=2) for each test is on each data sheet. Our measurement data meets or exceeds the measurement uncertainty requirements of the applicable specification; therefore, the test data can be compared directly to the specification limit to determine compliance. The calculations for estimating measurement uncertainty are based upon ETSI TR 100 028 (or CISPR 16-4-2 as applicable), and are available upon request.

The following table represents the Measurement Uncertainty (MU) budgets for each of the tests that may be contained in this report.

Test	+ MU	- MU
Frequency Accuracy (Hz)	0.0007%	-0.0007%
Amplitude Accuracy (dB)	1.2 dB	-1.2 dB
Conducted Power (dB)	0.3 dB	-0.3 dB
Radiated Power via Substitution (dB)	0.7 dB	-0.7 dB
Temperature (degrees C)	0.7°C	-0.7°C
Humidity (% RH)	2.5% RH	-2.5% RH
Voltage (AC)	1.0%	-1.0%
Voltage (DC)	0.7%	-0.7%
Field Strength (dB)	5.2 dB	-5.2 dB
AC Powerline Conducted Emissions (dB)	2.4 dB	-2.4 dB

PRODUCT DESCRIPTION

Client and Equipment Under Test (EUT) Information

Company Name:	Williams Sound, LLC
Address:	10300 Valley View Road
City, State, Zip:	Eden Prairie, MN 55344
Test Requested By:	Lawrence Herrington
Model:	T45NET-D
First Date of Test:	May 31, 2016
Last Date of Test:	June 02, 2016
Receipt Date of Samples:	May 31, 2016
Equipment Design Stage:	Preproduction
Equipment Condition:	No Damage

Information Provided by the Party Requesting the Test

Functional Description of the EUT:

The T45 is an FM transmitter operating in the 72 - 76 MHz bands. It is used for hearing assistance and associated uses like language translation support. The T45 is capable of rack mounting. It permits a variety (4) of antennas which permit both local and remote antenna configurations. For local antennas (2) there is a hole in the top of the unit to permit attachment of the desired antenna. For remote antennas (2) there is an "F" connector mounted on the rear of the device. 4 different audio inputs are allowed. 1. Analog audio. 2. AES3 and 3. SPDIF audio, and 4. Dante audio. Depending on the selected antenna and audio source, the user may comfortably sit anywhere in the range of the device, listening on a receiver, and hear at an audio level he/she selects for their own comfort and intelligibility.

Client Justification:

The T45NET-D was tested because it is the maximum configuration, and includes the T45NET and T45 models.

1. T45 is the base unit.
2. T45NET is a T45 with an added circuit card to provide ethernet control capability.
3. T45NET-D is a T45 with an added circuit card that provides both ethernet control (T45NET) and DANTE digital audio input capability.

Testing Objective:

Demonstrate compliance to FCC 15.237:2016 for operation in the 72.0-73.0, 74.6-74.8, 75.2-76.0 MHz bands.

MODIFICATIONS

Equipment Modifications

Item	Date	Test	Modification	Note	Disposition of EUT
1	5/31/2016	Field Strength of Fundamental	Modified from delivered configuration.	No EMI suppression devices were added or modified during this test.	EUT remained at Northwest EMC following the test.
2	6/2/2016	Occupied Bandwidth	Modified from delivered configuration.	No EMI suppression devices were added or modified during this test.	EUT remained at Northwest EMC following the test.
3	6/2/2016	Field Strength of Harmonics and Spurious Radiated Emissions	Modified from delivered configuration.	No EMI suppression devices were added or modified during this test.	EUT remained at Northwest EMC following the test.
4	6/2/2016	AC – Powerline Conducted Emissions	Tested as delivered to Test Station.	No EMI suppression devices were added or modified during this test.	Scheduled testing was completed.

OCCUPIED BANDWIDTH

Testing was performed using the mode(s) of operation and configuration(s) noted within the report. The individuals and/or the organization requesting the test provided the modes, configurations and settings used to complete the evaluation. The actual test parameters are specified in the test data, this includes items such as investigated frequency range (scanned) and test levels. The testing methods and performance specifications, as well as the test site used for the evaluation are indicated in the test data.

TEST EQUIPMENT

Attenuator	Fairview Microwave	SA18E-20	TWZ	10/21/2015	12
Cable	ESM Cable Corp.	Bilog Cables	MNH	12/7/2015	12
Antenna - Biconilog	Teseq	CBL 6141B	AYD	1/6/2016	24
Analyzer - Spectrum Analyzer	Agilent	N9010A	AFI	1/27/2016	12

TEST DESCRIPTION

The 20dB occupied bandwidth was measured using a Peak detector. The resolution bandwidth was set to 1-3% of the measured emissions bandwidth.

The EUT was set to low, medium and high transmit frequencies. The measurement was made in a radiated configuration in a semi-anechoic chamber with the fundamental of the carrier full maximized for its highest radiated power. The EUT was transmitting at the data rate(s) listed in the datasheet.

FIELD STRENGTH OF FUNDAMENTAL

Testing was performed using the mode(s) of operation and configuration(s) noted within the report. The individuals and/or the organization requesting the test provided the modes, configurations and settings used to complete the evaluation. The actual test parameters are specified in the test data, this includes items such as investigated frequency range (scanned) and test levels. The testing methods and performance specifications, as well as the test site used for the evaluation are indicated in the test data. The test data represents the configuration / operating mode/ model that produced the highest emission levels as compared to the specification limit.

Above 1000	1000.0	N/A	1000.0

TEST DESCRIPTION

The antennas to be used with the EUT were tested. The EUT was transmitting and while set at the lowest channel, a middle channel, and the highest channel available. While scanning, emissions from the EUT were maximized by rotating the EUT, adjusting the measurement antenna height and polarization, and manipulating the EUT and EUT antenna in 3 orthogonal planes.

Work Order:	WILM0013	Date:	05/31/16	
Project:	None	Temperature:	22.1 °C	
Job Site:	MN05	Humidity:	56.3% RH	
Serial Number:	3	Barometric Pres.:	1014 mbar	
EUT:	T45NET-D			Tested by: Dustin Sparks
Configuration:	5			
Customer:	Williams Sound, LLC			
Attendees:	Lawrence Herrington, Kelly Williams, Tom Lake			
EUT Power:	110VAC/60Hz			
Operating Mode:	Transmitting 72.1 MHz (low channel), 74.7 MHz (mid channel), and 75.9 MHz (high channel) CW			
Deviations:	None			
Comments:	ANT025 antenna, R36 and R35=330 ohms, R33=36 ohms, R40=39 ohms. Per manufacturer, EUT antenna will always be mounted in vertical position. Coax port is only populated when external antenna is used.

FIELD STRENGTH OF HARMONICS AND SPURIOUS RADIATED EMISSIONS

Testing was performed using the mode(s) of operation and configuration(s) noted within the report. The individuals and/or the organization requesting the test provided the modes, configurations and settings used to complete the evaluation. The actual test parameters are specified in the test data, this includes items such as investigated frequency range (scanned) and test levels. The testing methods and performance specifications, as well as the test site used for the evaluation are indicated in the test data. The test data represents the configuration / operating mode/ model that produced the highest emission levels as compared to the specification limit.

MODES OF OPERATION - HARMONICS

Transmitting 72.1 MHz (low channel), 74.7 MHz (mid channel), and 75.9 MHz (high channel); modulated with 1000 Hz sine wave at 200mVRMS.

MODES OF OPERATION - BAND EDGE

Transmitting 72.1 MHz, 72.9 MHz (low band), 74.7 MHz (mid band), and 75.3 MHz, 75.9 MHz (high band); modulated with 1000 Hz sine wave at 200mVRMS.

POWER SETTINGS INVESTIGATED

110VAC/60Hz

CONFIGURATIONS INVESTIGATED

WILM0013 - 12
WILM0013 - 11
WILM0013 - 10
WILM0013 - 9

FREQUENCY RANGE INVESTIGATED

Start Frequency | 30 MHz Stop Frequency | 1000 MHz

SAMPLE CALCULATIONS

Radiated Emissions: Field Strength = Measured Level + Antenna Factor + Cable Factor - Amplifier Gain + Distance Adjustment Factor + External Attenuation

TEST EQUIPMENT

Description	Manufacturer	Model	ID	Last Cal.	Interval (mo)
Attenuator	Fairview Microwave	SA18E-20	TWZ	10/21/2015	12
Filter - High Pass	Mini Circuits	BHP-150+	HIA	11/12/2015	12
Amplifier - Pre-Amplifier	Miteq	AM-1616-1000	AVO	12/10/2015	12
Cable	ESM Cable Corp.	Bilog Cables	MNH	12/7/2015	12
Antenna - Biconilog	Teseq	CBL 6141B	AYD	1/6/2016	24
Analyzer - Spectrum Analyzer	Agilent	N9010A	AFI	1/27/2016	12

MEASUREMENT BANDWIDTHS

Frequency Range (MHz)	Peak Data (kHz)	Quasi-Peak Data (kHz)	Average Data (kHz)
0.01 - 0.15	1.0	0.2	0.2
0.15 - 30.0	10.0	9.0	9.0
30.0 - 1000	100.0	120.0	120.0
Above 1000	1000.0	N/A	1000.0

TEST DESCRIPTION

The highest gain of each type of antenna to be used with the EUT was tested. The EUT was configured for low, mid, and high band transmit frequencies. For each configuration, the spectrum was scanned throughout the specified range. In addition, measurements were made in the restricted bands to verify compliance. While scanning, emissions from the EUT were maximized by rotating the EUT on a turntable, adjusting the position of the EUT and the EUT antenna in three orthogonal axis, and adjusting measurement antenna height and polarization. A preamp and high pass filter were used for this test in order to provide sufficient measurement sensitivity.

Measurements at the band edge were taken according to the method called out in ANSI C63.10:2013 section 6.10.6 for Marker-Delta Method. The fundamental was measured using standard bandwidths and measurement detectors. A screen capture using a resolution bandwidth greater than the 1 percent emissions bandwidth was taken using a marker delta measurement of the highest value outside of the band compared to the highest value in the band. This offset was added to the reading of the fundamental to calculate the band edge reading.

Work Order:	WILM0013	Date:	06/01/16

Work Order:	WILM0013	Date:	06/01/16	
Project:	None	Temperature:	22.8 °C	
Job Site:	MN05	Humidity:	51.5% RH	
Serial Number:	3	Barometric Pres.:	1013 mbar	
EUT:	T45NET-D			
Configuration:	10			
Customer:	Williams Sound, LLC			
Attendees:	Lawrence Herrington, Kelly Williams			
EUT Power:	110VAC/60Hz			
Operating Mode:	Transmitting 72.1 MHz (low channel), 74.7 MHz (mid channel), and 75.9 MHz (high channel); modulated with 1000 Hz sine wave at 200mVRMS.			
Deviations:	None			
Comments:	ANT021 antenna. Per manufacturer, EUT antenna will always be mounted in vertical position. Coax port is only populated when external antenna is used.

AC - POWERLINE CONDUCTED EMISSIONS

TEST DESCRIPTION

Using the mode of operation and configuration noted within this report, conducted emissions tests were performed. The frequency range investigated (scanned), is also noted in this report. Conducted power line measurements are made, unless otherwise specified, over the frequency range from 150 kHz to 30 MHz to determine the line-to-ground radio-noise voltage that is conducted from the EUT power-input terminals that are directly (or indirectly via separate transformer or power supplies) connected to a public power network. Per the standard, an insulating material was also added to ground plane between the EUT's power and remote I/O cables. Equipment is tested with power cords that are normally used or that have electrical or shielding characteristics that are the same as those cords normally used. Typically those measurements are made using a LISN (Line Impedance Stabilization Network), the 50ohm measuring port is terminated by a 50ohm EMI meter or a 50ohm resistive load. All 50ohm measuring ports of the LISN are terminated by 50ohm. The test data represents the configuration / operating mode/ model that produced the highest emission levels as compared to the specification limit.

TEST EQUIPMENT

Description	Manufacturer	Model	ID	Last Cal.	Cal. Due
Analyzer - Spectrum Analyzer	Agilent	E4443A	AAS	3/8/2016	3/8/2017
Cable - Conducted Cable Assembly	Northwest EMC	MNC, HGN, TYK	MNCA	1/29/2016	1/29/2017
LISN	Solar Electronics	9252-50-R-24-BNC	LIY	3/21/2016	3/21/2017
LISN	Solar Electronics	9252-50-R-24-BNC	LIQ	11/3/2015	11/3/2016

MEASUREMENT UNCERTAINTY

Description		
Expanded k=2	2.4 dB	-2.4 dB

CONFIGURATIONS INVESTIGATED

WILM0013-9

MODES INVESTIGATED

Transmitting 74.7 MHz; modulated with 1000 Hz sine wave at 200mVRMS.

AC - POWERLINE CONDUCTED EMISSIONS

EUT:	T45NET-D	Work Order:	WILM0013
Serial Number:	3	Date:	06/02/2016
Customer:	Williams Sound, LLC	Temperature:	22.2°C
Attendees:	Lawrence Herrington, Kelly Williams	Relative Humidity:	43.7%
Customer Project:	None	Bar. Pressure:	1020 mb
Tested By:	Dustin Sparks	Job Site:	MN03
Power:	110VAC/60Hz	Configuration:	WILM0013-9

TEST SPECIFICATIONS

Specification:	Method:
FCC 15.207:2016	ANSI C63.10:2013

TEST PARAMETERS

Run #:	3	Line:	High Line	Add. Ext. Attenuation (dB):	0
--------	---	-------	-----------	-----------------------------	---

COMMENTS

ANT025 antenna

EUT OPERATING MODES

Transmitting 74.7 MHz; modulated with 1000 Hz sine wave at 200mVRMS.

DEVIATIONS FROM TEST STANDARD

None
