

Wireless alarm detector manual

Instructions

System Introduction

Magnetic detector installation of the Door

use a double-sided adhesive affix magnetic to the door and attach the door sensor box to the door frame, put the magnetic near the LED light side on the sensor box when installing, both of alignment, spacing the smaller the better.

The Installation of Infrared Detector

The theory of Infrared detector is that works by infrared signals send out by the human body, it can sense the body movements. Detection range is usually 5-12 meters. Infrared probe should be installed around 2.2 meters over the ground position and be aligned to detect regions.

Infrared probe can only be installed in the room, not facing the sunlight. The location of infrared installation will affect the accuracy of detection.

FCC ID: D6PHFD-MC01W

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) this device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

NOTE: This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.
