Subject: Cover Letter for FCC application for Certification

To whom it may concern:

This **Model Wireless/LBC** is a part of a Wireless Digital Transmission System operating in the 2.4GHz ISM band for new models of Garrett walk-through Security Metal Detectors. The radio is powered by a +3.3 volt on-board regulator, derived from the detector's +15 volt supply. It transmits and receives data via a wireless link to other Garrett walk-throughs for set-up and synchronization.

This is to seek an original Modular Certification on the **Model Wireless/LBC** as compliant with FCC 15.247.

FCC ID: DBDWLBC6100

Sincerely,

Robert Podhrasky
Sr. VP, COO
