Subject: DD4P10TB Class II Permissive Change

Dear Mr. Crowder

This letter is to confirm that the Shure P10T wireless monitor transmitter is seeking a Class II Permissive Change that will change its operating range from 554-626 MHz to 554-608 MHz. The only parameter changing is the upper frequency of its range.

Attached is the FCC application requesting this change, along with a copy of the Federal Communications Commission KDB 206256, which addresses changes affecting the 600 MHz band.

Sincerely,

Craig Kozokar
Global Compliance Project Engineer
Shure Incorporated
