

<b>FCC ID:</b> DZO- OSREFRMG13P	
<b><u>Prediction of MPE limit at a given distance</u></b>	
Equation from page 18 of OET Bulletin 65, Edition 97-01	
$S = \frac{PG}{4\pi R^2}$	
where:	<p>S = power density</p> <p>P = power input to the antenna</p> <p>G = power gain of the antenna in the direction of interest relative to an isotropic radiator</p> <p>R = distance to the center of radiation of the antenna</p>
Maximum peak output power at the antenna terminal:	<b>11.67</b> (dBm)
Maximum peak output power at the antenna terminal:	<b>14.68926278</b> (mW)
Antenna gain(typical):	<b>0.63</b> (dBi)
Maximum antenna gain:	<b>1.156112242</b> (numeric)
Prediction distance:	<b>20</b> (cm)
Prediction frequency:	<b>2450</b> (MHz)
MPE limit for uncontrolled exposure at prediction frequency:	<b>1</b> (mW/cm <sup>2</sup> )
Power density at prediction frequency:	<b>0.003379</b> (mW/cm <sup>2</sup> )
Therefore device complies with FCC RF radiation exposure limits for general population in mobile exposure category (distance > 20cm)
