Date: November 1, 2012

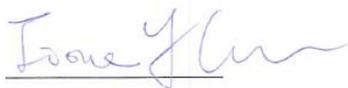

We, Dell Inc., declare the device of FCC ID: E2KJ42A; IC: 1514B-J42A which does not support Software Defined Radio transmitter (SDR) for Bluetooth, because the hardware is already existed inside the chipset, and the BT 4.0 function is turned on by software. The frequency range is kept within the 2.4GHz ISM band.

Bluetooth maximum average power (1.61 dBm, 1.45 mW) is lower than the exemption criteria ($60/f_{\text{(GHz)}} \text{ mW}$) and RF exposure of the additional feature is not required.

We state that no devices were sold (this includes inside/or outside the U.S.) as of the date of this C2PC filing and that the software activation will be implemented by DELL only before shipping products to users.

Should you have any questions or comments regarding this matter, please have my best attention.

Sincerely yours,
