## GENERAL REPORT SUMMARY

This electromagnetic emission test report is generated by Compatible Electronics Inc., which is an independent testing and consulting firm. The test report is based on testing performed by Compatible Electronics personnel according to the measurement procedures described in the test specifications given below and in the "Test Procedures" section of this report.

The measurement data and conclusions appearing herein relate only to the sample tested and this report may not be reproduced in any form unless done so in full with the written permission of Compatible Electronics.

This report must not be used to claim product certification, approval or endorsement by NVLAP, NIST, or any agency of the federal government.

Device Tested: Door and Window Detector  
Model: F-ADT-DW-1  
S/N: None

Product Description: The EUT is a module that is used to detect motion in the protected areas for security.

Modifications: The EUT was not modified in order to comply with specifications.

Manufacturer: Nortek Security & Control, LLC.  
1950 Camino Vida Roble, Suite 150  
Carlsbad, CA 92008

Test Dates: December 18<sup>th</sup>-20<sup>th</sup>, 2017  
January 2<sup>nd</sup>, 2018

Test Specifications Covered by Accreditation:

EMI requirements

CFR Title 47, Part 15 Subpart C Sections 15.205, 15.207, 15.209, & 15.247.  
RSS 247 & RSS GEN

Test Procedure: ANSI C63.4 & C63.10, and KDB 558074 D01 v04.

## SUMMARY OF TEST RESULTS

| TEST | DESCRIPTION                                                              | RESULTS                                                                                         |
|------|--------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------|
| 1    | Conducted RF Emissions,<br>150 kHz - 30 MHz                              | The EUT is battery powered. Therefore, this test was deemed unnecessary and not performed.      |
| 2    | Radiated RF Emissions & Harmonics,<br>9 kHz – 10,000 MHz                 | Complies with the limits of CFR Title 47 Part 15 Subpart C Sections 15.205, 15.209, and RSS GEN |
| 3    | DTS Bandwidth                                                            | Complies with CFR Title 47 Part 15 Subpart C Section 15.247 and RSS 247                         |
| 4    | Maximum Peak Conducted Output Power                                      | Complies with CFR Title 47 Part 15 Subpart C Section 15.247 and RSS 247                         |
| 5    | Maximum Peak Power Spectral Density<br>Level In The Fundamental Emission | Complies with CFR Title 47 Part 15 Subpart C Section 15.247 and RSS 247                         |
| 6    | Emissions in Non-Restricted Frequency<br>Bands (in 100kHz Bandwidth)     | Complies with CFR Title 47 Part 15 Subpart C Section 15.247 and RSS 247                         |
| 7    | Emissions in the Restricted Bands                                        | Complies with CFR Title 47 Part 15 Subpart C Section 15.205, 15.247 and RSS 247                 |

## 1. PURPOSE

This document is a qualification test report based on the Electromagnetic Interference (EMI) tests performed on the Door and Window Detector Model: F-ADT-DW-1. The EMI measurements were performed according to the measurement procedure described in ANSI C63.10 & C63.4. The tests were performed in order to determine whether the electromagnetic emissions from the equipment under test, referred to as EUT (equipment under test) hereafter, are within the specification limits defined by the Code of Federal Regulations Title 47, Part 15 Subpart C sections 15.205, 15.209, 15.247, RSS GEN, and RSS 247.

## 2. ADMINISTRATIVE DATA

### 2.1 Location of Testing

The tests described herein were performed at the test facility of Compatible Electronics, 20621 Pascal Way Lake Forest, California 92630.

### 2.2 Traceability Statement

The calibration certificates of all test equipment used during the test are on file at the location of the test. The calibration is traceable to the National Institute of Standards and Technology (NIST).

### 2.3 Cognizant Personnel

Nortek Security & Control, LLC.

Josh Hansen

Compatible Electronics Inc.

Torey Oliver  
Joey Madlangbayan

Test Engineer  
Safety Manager

### 2.4 Date Test Sample was Received

The test sample was received on December 18<sup>th</sup>, 2017.

### 2.5 Disposition of the Test Sample

The test sample remains at Compatible Electronics as of the date of this test report.

### 2.6 Abbreviations and Acronyms

The following abbreviations and acronyms may be used in this document.

|       |                                                     |

#### 4. DESCRIPTION OF TEST CONFIGURATION

##### 4.1 Description of Test Configuration

The Door and Window Detector Model: F-ADT-DW-1 (EUT) was setup in a tabletop configuration. For the unintentional spurious emissions in the range of 30-1000 MHz the EUT was placed on the table with a motion sensor. The EUT was continuously transmitting a data stream during transmit tests and continuously receiving during receiver tests. The EUT was checked in all axes.

A new battery was used for testing.

It was determined that the emissions were at their highest level when the EUT was transmitting in the configuration described above for Radiated Emissions. The final radiated data was taken in the above configuration. Please see Appendix E for the test data.

##### 4.1.1 Photograph Test Configuration (Z-Axis Shown)

#### 4.1.2 Axis Determination

Y Axis

Z Axis

X Axis

#### 4.1.3 *Cable Construction and Termination*

##### Cable 1

This is a 2 meter, foil shielded, USB cable that connect the EUT to the Laptop (for programming only). The cable has a USB Type-A connector at the Laptop end and has an 8-pin plastic ribbon cable connector at the EUT end of the cable. The cable was not bundled. The shield of the cable was terminated at the Laptop end of the cable only.

##### Cable 2

This is a 3 meter, unshielded, cable that connects the EUT to the DC Power Supply. The cable is hardwired at both ends of the cable. The cable was not bundled.

## 6. TEST SITE DESCRIPTION

### 6.1 Test Facility Description

Please refer to section 2.1 and the figures in Appendix D of this report for test location.

### 6.2 EUT Mounting, Bonding and Grounding

For testing below 1 GHz the EUT was mounted on a 1.0 by 1.5 by 0.8 meters high non-conductive table, which was placed on the ground plane.

For testing above 1 GHz the EUT was mounted 1.5 meter above the ground plane.

The EUT was not grounded.

### 6.3 Facility Environmental Characteristics

When applicable refer to the data sheets in Appendix E for the relative humidity, air temperature, and barometric pressure.

### 6.4 Measurement Uncertainty

“Compatible Electronics’  $U_{lab}$  value is less than  $U_{cispr}$ , thus based on this – compliance is deemed to occur if no measured disturbance exceeds the disturbance limit.

$$u_c(y) = \sqrt{\sum_i c_i^2 u^2(x_i)}$$

| Measurement                                                                                       |                      | $U_{cispr}$ | $U_{lab} = 2 u_c(y)$ |
|---------------------------------------------------------------------------------------------------|----------------------|-------------|----------------------|
| Conducted disturbance (mains port)                                                                | (150 kHz – 30 MHz)   | 4,0 dB      | 2.88                 |
| Radiated disturbance (electric field strength on an open area test site or alternative test site) | (30 MHz – 1 000 MHz) | 5,2 dB      | 3.53                 |

## 7. CHARACTERISTICS OF THE TRANSMITTER

### 7.1 Channel Number and Frequencies

There is a total of 10 channels. The low channel is at 904.0 MHz, mid channel is at 912.0 MHz, and the high channel is at 922.0 MHz. There is approximately 2 MHz separation between channels and the EUT uses OQPSK modulation.

|            |         |
|------------|---------|
| Channel 1  | 904 MHz |
| Channel 2  | 906 MHz |
| Channel 3  | 908 MHz |
| Channel 4  | 910 MHz |
| Channel 5  | 912 MHz |
| Channel 6  | 914 MHz |
| Channel 7  | 916 MHz |
| Channel 8  | 918 MHz |
| Channel 9  | 920 MHz |
| Channel 10 | 922 MHz |

### 7.2 Antenna

The antenna is a trace on the PCB.

### 7.3 Software

08/15/2017, 10016717, F113, stored on a local server located at NSC headquarters.

## 8. TEST PROCEDURES

The following sections describe the test methods and the specifications for the tests. Test results are also included in this section.

### 8.1 RF Emissions

#### 8.1.1 Conducted Emissions Test

*Test Results: The EUT is battery powered, therefore; this test was deemed unnecessary and not performed.*

The EMI receiver was used as a measuring meter. A quasi-peak and/or average reading was taken only where indicated in the data sheets. The LISN output was measured using the EMI receiver. The output of the second LISN was terminated by a 50-ohm termination. The effective measurement bandwidth used for this test was 9 kHz.

Please see section 6.2 of this report for mounting, bonding, and grounding of the EUT. The EUT received its power through the LISN, which was bonded to the ground plane. The EUT was set up with the minimum distances from any conductive surfaces as specified in ANSI 63.4. The excess power cord was wrapped in a figure eight pattern to form a bundle not exceeding 0.4 meters in length.

The conducted emissions from the EUT were maximized for operating mode as well as cable placement. The final data was collected under program control by the computer software. The final qualification data is located in Appendix E.

### 8.1.2 Radiated Emissions (Spurious and Harmonics) Test

The R&S receiver was used as a measuring meter. The receiver was used in the peak detect mode with the "Max Hold" feature activated. In this mode, the receiver records the highest measured reading over all the sweeps. An Amplifier was used to increase the sensitivity of the instrument. A Preamplifier was used for frequencies above 1 GHz.

For spurious emissions, the quasi-peak detector was used for frequencies below 1GHz and the average detector was used for frequencies above 1 GHz.

For the radiated Harmonic emissions, a linear average detector was used.

The measurement bandwidths and transducers used for the radiated emissions test were:

| FREQUENCY RANGE (MHz) | TRANSDUCER          | EFFECTIVE MEASUREMENT BANDWIDTH      |
|-----------------------|---------------------|--------------------------------------|
| .009 to .150          | Active Loop Antenna | 200 Hz                               |
| .150 to 30            | Active Loop Antenna | 9 kHz                                |
| 30 to 1000            | Combilog Antenna    | 100 kHz (120kHz for QP Measurements) |
| 1000 to 10000         | Horn Antenna        | 1 MHz                                |

The TDK FAC-3 shielded test chamber of Compatible Electronics, Inc. was used for radiated emissions testing. This test site is in full compliance with ANSI, EN 50147-2, and CISPR 22. Please see section 6.2 of this report for mounting, bonding and grounding of the EUT. The turntable supporting the EUT is remote controlled using a motor. The turntable permits EUT rotation of 360 degrees in order to maximize emissions. Also, the antenna mast allows height variation of the antenna from 1 meter to 4 meters. Data was collected in the worst case (highest emission) configuration of the EUT. At each reading, the EUT was rotated 360 degrees and the antenna height was varied from 1 to 4 meters in both vertical and horizontal polarizations (for E field radiated field strength).

#### Test Results:

The EUT complies with the limits of CFR Title 47 Part 15 Subpart C sections 15.205, 15.209, 15.247, RSS 247, and RSS GEN.

### **8.1.3 DTS Bandwidth**

The DTS Bandwidth was measured directly connected to the EMI Receiver using a RBW of 100 kHz and a VBW of 300 kHz. A peak detector and a max hold trace were used with auto sweep time. The trace was allowed to fully maximize. We measured the maximum width of the emission that is constrained by the frequencies associated with the two outermost amplitude points (upper and lower frequencies) that are attenuated by 6 dB relative to the maximum level measured in the fundamental emission. The automatic bandwidth measurement capability of the EMI Receiver was employed using the n dB bandwidth mode with n set to 6 dB. The final qualification data sheets are located in Appendix E.

#### **Test Results:**

The EUT complies with Part 15, Subpart C, Section 15.247 and RSS 247.

### **8.1.4 Maximum Peak Conducted Output Power**

The maximum peak conducted output power was measured using a EMI Receiver. The EMI Receiver used a 1 MHz resolution bandwidth which is greater than the DTS bandwidth and a 3 MHz video bandwidth. The final qualification data sheets are located in Appendix E.

#### **Test Results:**

The EUT complies with Part 15, Subpart C, Section 15.247 and RSS 247.

### **8.1.5 Maximum Peak Power Spectral Density Level in The Fundamental Emission**

The Maximum Peak Power Spectral Density Level in the Fundamental Emission was measured directly connected to the EMI Receiver. Tuned to the center frequency of the DTS channel and set the span to 1.5 times the DTS bandwidth. RBW was set to minimum of 3 kHz but not greater than 100kHz and VBW 3 \* RBW. A peak detector was used with the sweep time set to auto. A max hold trace was used and allowed to fully stabilize. The peak marker function was used to determine the maximum amplitude level within the RBW. The final qualification data sheets are located in Appendix E.

#### **Test Results:**

The EUT complies with Part 15, Subpart C, Section 15.247 and RSS 247.

#### **8.1.6 Emissions in Non-Restricted Frequency Bands (in 100kHz Bandwidth)**

The Emissions in Non-Restricted Frequency Bands (in 100kHz Bandwidth) measurements were performed using the EMI Receiver directly connected to the EUT. A reference level was established by setting the instrument center frequency to DTS channel center frequency. The span was set to  $\geq 1.5$  times the DTS bandwidth. The RBW was 100 kHz and VBW 300 kHz. A peak detector was used with a sweep time set to auto. A max hold trace was used and allowed to fully stabilize. The peak marker function was used to determine the level and 20dB below that was the reference level. For Emission Level Measurement, the center frequency and span were set to encompass the frequency range to be measured. RBW was set to 100 kHz and VBW to 300 kHz. A peak detector was used with a sweep time set to auto. The number of measurement points were greater than span/RBW. A max hold trace was used and allowed to fully stabilize. The peak marker function was used to determine the maximum amplitude level. The final qualification data sheets are located in Appendix E.

##### **Test Results:**

The EUT complies with Part 15, Subpart C, Section 15.247 and RSS 247.

#### **8.1.7 Emissions in the Restricted Bands (Radiated)**

The Emissions in the Restricted Bands measurement was performed using the EMI Receiver at a 3-meter test distance to obtain the final test data. The final qualification data sheets are located in Appendix E.

##### **Test Results:**

The EUT complies with Part 15 Subpart C, Section 15.205 and RSS GEN.

#### **8.1.8 Emissions Radiated Outside of the Fundamental Frequency Band**

The Band Edge measurement was performed using the EMI Receiver at a 3-meter test distance to obtain the final test data. The low and high channels were tuned to during the low and high band edge tests. The final qualification data sheets are located in Appendix E.

##### **Test Results:**

The EUT complies with Part 15, Subpart C, Section 15.247 and RSS 247.

**9. TEST PROCEDURE DEVIATIONS**

For conducted measurements a separate unit was used with in internal connector. For all fundamental and harmonic measurements, the EUT was connected to a DC power supply because the battery could not support the EUT for the duration of testing while in a constant transmit mode.

**10. CONCLUSIONS**

The Door and Window Detector Model: F-ADT-DW-1 meets all of the relevant specification requirements defined in the Code of Federal Regulations Title 47, Part 15 Subpart C sections 15.205, 15.207, 15.209, 15.247, RSS GEN & RSS 247.

## LABORATORY ACCREDITATIONS AND RECOGNITIONS

For US, Canada, Australia/New Zealand, Japan, Taiwan, Korea, and the European Union, Compatible Electronics is currently accredited by NVLAP to ISO/IEC 17025.

**For the most up-to-date version of our scopes and certificates please visit**

**<http://celectronics.com/quality/scope/>**

Quote from ISO-ILAC-IAF Communiqué on 17025:

"A laboratory's fulfilment of the requirements of ISO/IEC 17025:2005 means the laboratory meets both the technical competence requirements and management system requirements that are necessary for it to consistently deliver technically valid test results and calibrations. The management system requirements in ISO/IEC 17025:2005 (Section 4) are written in language relevant to laboratory operations and meet the principles of ISO 9001:2008 Quality Management Systems — Requirements."
