Dear Katie Hawkins.

I have attached the information that you have requested, which was supposed to be presented to you on the original date submittal (May 12, 2000). This information includes PDF files of the spreadsheets containing the corrected data as well as the analyzer plots of the fundamental and there harmonics at 903 and 927 MHz as well as the data on the side band emissions.

Due to the Fact that Part 15.249 does not provide a specific bandwidth limit we measured the points on the sides of the fundamentals were the level will pass the FCC Part 15.109 class B requirements and recorded this data as the bandwidth. This is the data taken on May 11, 2000, and also includes the original letter that I submitted on May 12, 2000.

I apologize for any inconvenience and look forward to hearing from you. Thank you for your patients and cooperation on this matter.

Sincerely,

Clay Allred
Test Engineer

P.S. The duty cycle or timing plots will be provided at a latter date, but as soon as possible.
