

NORTHWEST EMC, INC.

22975 NW Evergreen Parkway, Suite 400
Hillsboro, OR 97124

April 25, 2006

Dear Application Examiner:

On behalf of Intermec Technologies Corporation, Northwest EMC, Inc. is submitting this application for a Class 2 Permissive Change of the previously certified 802.11(b)/(g) radio FCC ID: EHADRCB. There have been no hardware or software changes to FCC ID: EHADRCB. Intermec is seeking authorization for new RF exposure conditions. FCC ID: EHADRCB will be installed in Intermec's 730 handheld computer. Alternately, it can be co-located with the previously certified Bluetooth module FCC ID: EHABTM210, in the 730 handheld computer. Both radios operate in the 2400-2483.5 MHz band.

FCC ID: EHADRCB will be used for inventory control and for Local Area Networks. The co-located Bluetooth radio is used for Personal Area Networks and inventory control applications. FCC ID: EHADRCB is considered a portable device because accessories are provided that allow the 730 handheld computer to be used within 20 cm of the head or torso of the user. SAR reports have been included with the exhibits.

Your efforts in reviewing this application are greatly appreciated.

Best regards,

Northwest EMC, Inc.
